(b)(1) Notwithstanding any other provision of law, (A) no podiatrist or optometrist shall be converted from employment under part III of title 5, United States Code, to full-time employment under paragraph (1) of section 4104, or temporary full-time employment or part-time employment under paragraph (1)(A) of section 4114(a), of title 38, United States Code, until the day after the rates of statutory pay systems are next adjusted by the President under section 5305 of title 5, United States Code, or November 1, 1977, whichever is earlier, but any such conversion thereafter shall be effective retroactive to October 21, 1976, or the most recent date of appointment in the Department of Medicine and Surgery of the Veterans' Administration of the employee concerned under such part III, whichever is later, and (B) effective on the date on which such pay systems are so adjusted, the amounts listed in the salary schedule under the heading "CLINICAL PODIATRIST AND OPTOMETRIST SCHEDULE" in paragraph (1) of section 4107(b) of title 38, United States Code, shall be increased by the same percentage of such adjustment as is so made in the salary schedule under the heading "PHYSICIAN AND DENTIST SCHEDULE" in such paragraph.

(2) The provisions of paragraph (1)(A) of this subsection shall be effective on the day before any conversion described in such paragraph and made prior to the date of enactment of this Act is made.

TITLE III—HEALTH CARE PROGRAM AND ELIGIBILITY AMENDMENTS

SEC. 301. (a) Subchapter II of chapter 17 of title 38, United States Code is, is amended by inserting after section 612 the following new section:

"§ 612A. Eligibility for readjustment professional counseling

"(a) The Administrator shall furnish initial readjustment professional counseling (including a general mental and psychological assessment in connection therewith) for any veteran who served on active duty after August 4, 1964, or prior thereto in the Indochina conflict, who has readjustment problems, and who, within a period of four years after the date of such veteran's discharge or release from service or two years after the date of enactment of this section, whichever is later, requests such assistance.

"(b) If, on the basis of initial counseling furnished under subsection (a) of this section, it is determined by a physician employed by the Veterans' Administration (or, in areas where no such physician is available, by a physician carrying out such function under a contract or fee arrangement) that the provision of mental health services is necessary to facilitate the successful readjustment of the veteran, such veteran shall be furnished such services (including such consultation, counseling, training, services, and expenses as are described in section 601(6)(B) of this title for such veteran's family or household members or legal guardian where essential to the effective treatment and rehabilitation of the veteran) on an outpatient basis as a part of medical services provided under the conditions specified in clause (1)(B) of section 612(f) of this title. For the purposes of furnishing such services, the counseling furnished under subsection (a) of this section shall be deemed to have been furnished as a part of hospital care. Any hospital care and other medical services deemed necessary as a result of such initial counseling shall be furnished only in accordance with the eligibility criteria otherwise set forth in this chapter (including section 611(b) thereof), and, with respect to a particular veterans who is not eligible for such necessary care or services, the Administrator shall provide referral services to assure, to the maximum extent practicable, that such care or services are provided from sources outside the Veterans' Administration.

"(c) The Chief Medical Director shall provide for such training of professional, paraprofessional, and lay personnel as is necessary to carry out this section effectively, and shall utilize, to the maximum extent possible, the services of paraprofessionals, voluntary (without compensation) workers, and veteran-students (under section 1685 of this title) in initial intake and screening activities.

"(d) The Administrator, in cooperation with the Secretary of Defense, shall take appropriate action, as provided in section 241 of this title, to insure that, to the maximum extent practicable, all veterans who may be eligible for assistance under this section are advised of such potential eligibility.".

(b) The table of sections at the beginning of chapter 17 is amended by inserting

"612A. Eligibility for readjustment professional counseling."

below

"612. Eligibility for medical treatment.".

SEC. 402. (a) Chapter 17 of title 38, United States Code, is amended by inserting at the end thereof the following new subchapter:

"SUBCHAPTER VII—PREVENTIVE HEALTH CARE SERVICES

"§ 661. Purpose

"The purpose of this subchapter is to provide for a preventive health care program under which the Administrator shall (1) attempt to insure the best possible health care for veterans with service-connected disabilities by furnishing them feasible and appropriate preventive health care services, and (2) carry out a pilot program (including research) on a geographical or other basis to determine the cost-effectiveness and medical advantages of furnishing preventive health care services to veterans with service-connected disabilities.

"§ 662. Definition

"For the purposes of this subchapter, the term 'preventive health care services' may include, but is not limited to, any or all of the following services: Periodic medical and dental examinations; patient health education (including nutrition education); maintenance of drug use profiles, patient drug monitoring, and drug utilization education; mental health preventive services (including family counseling); substance (including tobacco) abuse prevention measures; immunizations against infectious disease; prevention of musculoskeletal deformity or other gradually developing disabilities of a metabolic or degenerative nature; genetic counseling concerning inheritance of genetically determined diseases; routine vision testing and eye care services; periodic reexamination of likely target populations (high-risk groups) for selected diseases and for functional decline of sensory organs, together with attendant appropriate remedial intervention; and such other medical services as may be necessary for providing effective and economical preventive health care.

"§ 663. Preventive health care services; pilot program

"(a)(1) The Administrator, in accordance with regulations which the Administrator shall prescribe, may furnish, on an inpatient, outpatient, or ambulatory basis, nationally or geographically, such preventive health care services as the Administrator determines are feasible and appropriate to any veteran in connection with the treatment of a service-connected disability under this chapter and to any veteran described in section 612(f)(2) of this title.

"(2) In connection with preventive health care services furnished under paragraph (1) of this subsection, the Administrator, in accordance with regulations which the Administrator shall prescribe, may institute appropriate controls and carry out followup studies (including research) to demonstrate the medical advantages and cost-effectiveness of furnishing such preventive health care services.

"(b)(1) The Administrator shall provide for the planning, design, and conduct of a health maintenance pilot program to demonstrate the medical advantages and cost-effectiveness of furnishing comprehensive preventive health care services to veterans with

varied types and degrees of service-connected disability. Such pilot program shall be undertaken as a controlled scientifically valid study (including a control group) involving the provision of comprehensive preventive health care services to not to exceed 10,000 veterans, and shall be initiated on October 1, 1978.

"(2) The Administrator may not furnish comprehensive preventive health care services under paragraph (1) of this subsection after the last day of the tenth fiscal year following the fiscal year in which the pilot program is initiated.

"(c) In carrying out the preventive health care program provided for in this subchapter, the Administrator shall emphasize the utilization of interdisciplinary health care teams composed, to the maximum extent feasible, of various professional and paraprofessional personnel, such as nurses, pharmacists, psychologists, podiatrists, optometrists, technicians, physician assistants, and expanded-function dental auxiliaries.

"(d) The Administrator shall, not later than ninety days after the date of the enactment of this section, advise each veteran eligible for care under subsection (a) of this section of the nature and likely extent of such veteran's eligibility for such care.

"§ 664. Reports

"The Administrator shall include in the annual report to the Congress required by section 214 of this title a comprehensive report on the administration of this subchapter, including such recommendations for additional legislation as the Administrator deems necessary.".

(b) The table of sections at the beginning of such chapter is amended by inserting at the end thereof the following:

"SUBCHAPTER VII—PREVENTIVE HEALTH CARE SERVICES

"661. Purpose.
"662. Definition.
"663. Preventive health care services; pilot program.
"664. Reports.".

(c) Except with respect to the pilot program provided for in subsection (b) of section 663 (as added by subsection (a) of this section) of title 38, United States Code, the amendments made by subsection (a) of this section shall be effective with respect to health care services furnished on and after April 1, 1978.

SEC. 303. (a) Subchapter II of chapter 17 of title 38, United States Code, is amended by inserting at the end thereof the following new section:

"§ 620A. Treatment and rehabilitation for alcohol or drug dependence or abuse disabilities

"(a)(1) The Administrator, in carrying out the responsibilities to furnish hospital nursing home, and domiciliary care and medical and rehabilitative services under this chapter, shall carry out specialized medical programs providing such inpatient and outpatient treatment (including treatment of the symptoms of detoxification, individual counseling and referral services, and crisis intervention) and rehabilitative services on a nationwide basis to eligible veterans suffering from alcohol or drug dependence or abuse disabilities as the Administrator determines to be reasonably necessary to bring about the veterans recovery and rehabilitation from such a disability. In carrying out such specialized medical programs, the Administrator (A) shall utilize the most efficacious available treatment and rehabilitation modalities (stressing, to the maximum extent practicable, in such programs the utilization of satellite facilities, halfway houses, encounter-style therapeutic communities, and counselors who have recovered from such disabilities) extending beyond the detoxification period and designed to bring about, to the maximum extent possible, the recovery of the patient and, to the maximum extent practicable, the restoration of such patient to society as a productive, self-sufficient citizen, and (B) may utilize private halfway house facilities for which the Administrator contracts in accordance with regulations which the Administrator shall prescribe.

"(2) Notwithstanding any other provision of this title, the Administrator may, in the Administrator's discretion pursuant to such regulations as the Administrator shall prescribe, provide treatment and services under this section to any person, other than a person barred from receiving benefits by section 3103 of this title, who abused drugs or alcohol during a period of active military, naval, or air service other than a period of such service from which such person was discharged by reason of a bad conduct discharge.

"(b) If the Administrator determines that it is essential to the successful treatment and rehabilitation of a veteran receiving initial evaluation or treatment under this section that treatment (including the furnishing of any medication and rehabilitative services be furnished in the same program to a member of the veteran's immediate family who is suffering from an alcohol or drug dependence or abuse disability, then the Administrator shall provide the veteran with like treatment and services, if requested, at Veterans' Administration expense (up to an amount deemed reasonable by the Administrator), in a community facility, approved by the Administrator, for which the Administrator contracts and at which such family member has been accepted for treatment (not at Veterans' Administration expense) with the veteran.

"(c) In providing for treatment and rehabilitative services under this section to any veteran, the Administrator shall offer each veteran a drug-free treatment modality unless medically contraindicated.

"(d) The Administrator shall utilize all available resources of the Veterans' Administration, including the use of peer-group veterans, in seeking out and counseling toward treatment and rehabilitation, veterans eligible for treatment and rehabilitative services under this section.

"(e) The Administrator shall take all appropriate steps in consultation with the Secretary of Labor and the Chairman of the Civil Service Commissions to (1) urge all Federal agencies and appropriate private and public firms, organizations, agencies, and persons to provide appropriate employment and training opportunities for veterans provided treatment and rehabilitative services under this section who have been determined by competent medical authority to be sufficiently rehabilitated to be employable, and (2) provide all possible assistance to the Secretary of Labor in placing such veterans in such opportunities.

"(f) Upon receipt of an application for treatment and rehabilitative services under this section by any individual who has been discharged or released from a period of active military, naval, or air service under conditions other than honorable, the Administrator shall—

"(1) advise such individual of his or her rights to apply to the appropriate military, naval, or air service for review of such discharge or release pursuant to sections 1552 and 1553 of title 10;

"(2) advise such individual of the policy of such service with respect to such reviews of any discharge received in connection with drug use or possession; and

"(3) advise such individual of all program benefits under this title and any other law to which such individual is entitled and would be entitled with a discharge or release from such period of service under honorable conditions.

"(g)(1) The Administrator shall also provide for treatment and rehabilitative services in the case of any veteran eligible therefor under this section who has been charged with, or convicted of, a criminal offense by any court of competent jurisdiction in the United States, who is not confined and who is not required to participate in the treatment and rehabilitation program by any such court.

"(2) The Administrator may also provide for treatment and rehabilitative services to any veteran eligible therefor under this section who is under the jurisdiction of a court of competent jurisdiction as the result of having been charged with, or having been convicted of, a criminal offense and who is required to participate in a treatment and rehabilitation program by such court, but such services may be provided only under such conditions as the Administrator determines will insure that the participation of such veteran in the program in question will not impair the voluntary nature of the treatment and rehabilitative services being provided to other patients in such program.

"(h)(1) Any member of the active military, naval, or air service who is determined by the Secretary of the military department concerned to have an alcohol or drug dependence or abuse disability, may, pursuant to such terms as may be agreed upon by the Secretary concerned and the Administrator, and subject to the provisions of the Act of March 4, 1915, as amended (31 U.S.C. 686), be transferred to any Veterans' Administration facility within the last thirty days of such member's tour of duty and be provided treatment and rehabilitative services under this section as if such member were a veteran.

"(2) No member of the active military, naval, or air service shall be transferred to any Veterans' Administration facility pursuant to paragraph (1) of this subsection unless such member requests such transfer in writing for a specific period of time within such member's tour of duty. No such member thereafter transferred shall be retained for treatment by the Administrator beyond such specified period of time within such member's tour of duty unless the member requests in writing treatment for a further specified period of time and such request is approved by the Secretary concerned and the Administrator.

"(i) The Administrator shall submit annually (as a part of the annual report submitted pursuant to section 214 of this title) a full report on the programs carried out under this section.".

(b) The table of sections at the beginning of such chapter is amended by inserting

"620A. Treatment and rehabilitation for alcohol or drug dependence or abuse disabilities."

below

"620. Transfers for nursing home care.".

SEC. 304. (a) Paragraph (18) of section 101 of title 38, United States Code, is amended to read as follows:

"(18) The term 'discharge or release' includes (A) retirement from the active military, naval, or air service, and (B) the satisfactory completion of the period of active military, naval, or air service for which a person was obligated at the time of entry into such service in the case of a person who, due to enlistment or reenlistment, was not awarded a discharge or release from such period of service at the time of such completion thereof and who, at such time, would otherwise have been eligible for the award of a discharge or release under conditions other than dishonorable.".

(b) Clause (2) of section 612(b) of title 38, United States Code, is amended by inserting after "that" in subclause (B) "(1) in the case of a person who reenters active service in either the military, naval, or air service within one year after the date of such person's prior discharge or release from such service, the one-year limitation shall be

measured from the date of such person's subsequent discharge or release, and (ii)".

Mr. CRANSTON. Mr. President, I ask unanimous consent that Jon Steinberg, Ed Scott, Gary Crawford, and Garner Shriver, of the Veterans' Affairs Committee staff, be granted the privileges of the floor during the consideration of this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, H.R. 5027 as reported, the Veterans' Health Care Amendments Act of 1977, will provide for important new medical programs and improved health care for America's sick and disabled veterans. The new programs include, first, a program of preventive health care services for eligible veterans with service-connected disabilities and a health maintenance pilot program for 10,000 veterans with service-connected disabilities to demonstrate the medical and cost advantages of comprehensive preventive health care; second, a program of professional outpatient readjustment counseling for veterans and their families to help them with problems the veteran may face after discharge from the armed forces; and third, a comprehensive program of treatment and rehabilitation for veterans addicted to or abusing alcohol or drugs.

Mr. President, these new programs are of vital importance to helping solve some of the most serious problems facing our Nation's veterans and to making new advances in what is one of the most promising new concepts in medicine today—preventive health care.

NEED TO COORDINATE EFFORTS TO RESOLVE VETERANS' PROBLEMS

I want to emphasize at this time the fact that many of the problems addressed by this legislation are interrelated and may also be aggravated by or contribute to further problems with which we must deal. Many of our Nation's veterans, particularly younger, disabled and minority veterans from the Vietnam era, are plagued with health and readjustment problems which are all too often compounded by employment difficulties. Unemployment among Vietnam-era veterans continues at a discouragingly high rate.

Mr. President, I believe that we need to continue to focus our energies on resolving the health, readjustment, and employment problems of those who served our Nation during a time of armed conflict. I am confident that this legislation can provide some of the critical, now missing tools necessary to provide the coordinated services needed to restore disabled and unemployed veterans to health and to constructive, contributing roles in our society. Thus, I strongly urge that the VA and other concerned agencies mount coordinated efforts to assist veterans with the interrelated difficulties of coping with adjustment to civilian life, drug and alcohol abuse and dependence disabilities, and employment problems. I cannot emphasize too strongly how important it frequently is for job training and placement efforts to be combined with health care and rehabilitation efforts in order for lasting benefit to be obtained from our attempts to be of assistance. For example, in the case of a veteran with an alcohol problem, treatment aimed at that disability alone may be fruitless if the veteran also has readjustment problems that are not being dealt with; and efforts to help with both the alcohol and readjustment aspects of the veterans' difficulties may be of little or no value if the veteran is unable to obtain permanent—or even transitional—employment.

Mr. President, recently there have been several promising developments, resulting from action by the Congress and the executive branch aimed at helping veterans, particularly minority and disabled veterans, with their employment difficulties. For example, earlier today, I attended the swearing in of Roland Mora as the first Deputy Assistant Secretary of Labor for Veteran's Employment, a key position created by section 601 of Public Law 94-502.

In addition, Mr. President, the Department of Labor has announced that it will be implementing for fiscal year 1978, the specific performance standards required by section 401 of Public Law 93-508. These standards—although coming almost 3 years after enactment of that legislation—will be used by the Secretary to determine whether and to what extent State public employment service agencies are complying with the veterans job counseling, training, and placement service provisions of chapter 41 of title 38, United States Code.

On the first of this month, as a result of cooperative efforts between the Veterans' Administration and the Department of Labor, all disabled veterans in receipt of compensation received a notice with that monthly check informing them of the chapter 42, title 38, United States Code, affirmative action program. This program, requiring certain Federal contractors to hire and advance in employment certain qualified Vietnam-era and disabled veterans, has not had the planned effect because—in large part—of the failure of past administrations to implement the program with vigor.

Also, I am receiving praise from the field concerning the efforts of disabled veteran outreach program workers—the DVOP program announced by the President shortly after his inauguration. The HIRE program—a second major component of the President's program to assist unemployed disabled and Vietnam-era veterans appears to have exceeded its job pledge goals already—although I caution that pledges are not jobs, and I urge the Department of Labor to follow up to see that these pledges are redeemed in viable, decent jobs.

Further, Congress in this session enacted as part of the Youth Employment Project and Demonstration Act—Public Law 95-93—a provision designed to spur the participation in Comprehensive Employment and Training Act programs of Vietnam-era and disabled veterans, and to require in the local Public Works and Capital Development and Investment Act Amendments—Public Law 95-28—in certain instances, special consideration in hiring for certain Vietnam-era and disabled veterans.

Moreover, Mr. President, the efforts of of the current administration in implementing with vigor other veterans' benefit and services is encouraging.

In light of these extensive ongoing efforts to help veterans, Mr. President, I believe that VA health care programs, including the expanded drug and alcohol and readjustment programs authorized by this bill, should be prepared to coordinate their efforts in appropriate cases with these and other veterans' employment activities in order to provide the veteran with the full range of services needed to restore him or her to a healthy, productive life in society.

VA FEE CARE IN PUERTO RICO

Mr. President, I also wish to note, in connection with the provisions of this bill dealing with the furnishing of contract health care services for the treatment of non-service-connected disabilities in Puerto Rico, that I am asking the General Accounting Office to investigate and report on this matter. The report from the GAO should help to assure that the committee and the Congress will have sufficient information to determine, during the next session, whether and under what, if any, conditions or limitations, the VA's authority to furnish such care should be extended beyond the current expiration date of December 31, 1978.

BACKGROUND OF LEGISLATION

Mr. President, with regard to the development of this legislation, the House passed H.R. 5027 on April 4, 1977, and the measure was referred to the Committee on Veterans' Affairs. On April 27, 1977, the Subcommittee on Health and Readjustment, which I chair, conducted a hearing on H.R. 5027 as passed by the House. The subcommittee received testimony in person or by submission on this and other measures from Deputy Administrator of Veterans' Affairs Rufus M. Wilson, Chief Medical Director John D. Chase, other representatives of the Veterans' Administration, and representatives of the American Legion, Disabled American Veterans, Paralyzed Veterans of America, and other concerned parties.

On June 14, 1977, on behalf of myself, the Vice Chairman of the Subcommittee on Health and Readjustment, Senator JOHN A. DURKIN, and Senator JENNINGS RANDOLPH introduced S. 1693. The Subcommittee conducted a hearing on S. 1693 on June 22, 1977. Testimony was submitted in person or in writing by Administrator of Veterans' Affairs Max Cleland, Chief Medical Director John D. Chase, other representatives of the Veterans' Administration, and representatives of the American Legion, Veterans of Foreign Wars, Paralyzed Veterans of America, National Association of VA Physicians, and other concerned parties.

On June 28, 1977, at the request of the Administration, I introduced S. 1775. The Subcommittee conducted a hearing on S. 1775 on July 1, 1977. Submitting testimony to the Subcommittee at that time were Chief Medical Director John D. Chase, other representatives of the Vet-

erans' Administration, the Veterans of Foreign Wars, the National Association of VA Physicians, and the National Association of VA Dentists.

Mr. President, by agreement of the Subcommittee on Health and Readjustment, H.R. 5027 was sent to the full committee for consideration. In a July 15, 1977, meeting, the full Committee on Veterans' Affairs voted to report favorably H.R. 5027, with an amendment in the nature of a substitute and a title amendment. H.R. 5027 as reported consists of three titles—title I having the same scope as H.R. 5027 as passed by the House, and titles II and III deriving, with various amendments, from S. 1775 and S. 1693, respectively.

SUMMARY OF H.R. 5027 AS REPORTED—BASIC PURPOSE

Mr. President, the basic purpose of H.R. 5027 as reported, which I shall hereafter refer to as "the committee bill" is to improve, in two fundamental ways, the quality and efficiency of health care provided to sick or disabled veterans in the Veterans' Administration's health care system.

First, the committee bill is designed to establish important new medical programs primarily for the treatment of veterans with serious service-connected or service-related disabilities. These include (1) a program of readjustment professional counseling to assist recently discharged veterans suffering from problems in readjusting to civilian life; (2) a pioneering, cost-effective program in preventive health care for veterans with service-connected disabilities; and (3) a comprehensive treatment and rehabilitation program for veterans suffering from alcohol or drug dependence or abuse disabilities.

Second, the committee bill would make various changes in current law to (1) extend and improve the VA's statutory authority to enter into special-pay agreements with physicians and dentists in the Department of Medicine and Surgery (2) clarify the circumstances under which hospital and medical services may be furnished under contract to the VA, and (3) eliminate minor inequities in the law regarding the entitlement of certain veterans to dental care and the definition of "discharge and release" for purposes of eligibility for veterans' benefits generally.

SUMMARY OF PROVISIONS

Mr. President, the Committee bill has three titles: Contract care amendments; physician and dentist special-pay and other pay amendments; and general health care program and eligibility amendments.

Title I: Contract Care Amendments.—This title clarifies the circumstances under which the VA may furnish contract hospital care and medical services in certain cases. Included in title I of the Committee bill are provisions that would:

First, specify that eligible veterans who are in need of regular aid and attendance or are permanently housebound may, when it is found medically necessary to the provision of appropriate treatment, be furnished contract outpatient treatment for non-service-connected disabilities under the same circumstances as such treatment may be provided for service-connected disabilities.

Second, provide for the continuation, for 1 year from the date of enactment or such longer period as is necessary, of contract hospital care and outpatient treatment services to veterans who were provided such care and treatment during the period October 20, 1976, the day preceding the date of enactment of Public Law 94–581, the Veterans Omnibus Health Care Act of 1976, through May 15, 1977.

Third, authorize the provision of contract hospital care, and outpatient treatment of non-service-connected conditions which will obviate hospital admissions, in Alaska, Hawaii, the Commonwealth of Puerto Rico, and territories and possessions of the United States, so long as with respect to each (except in the case of Puerto Rico) the annually determined hospital patient load and incidence of the provision of medical services at VA expense is consistent with such levels of hospital care and medical services, respectively, furnished by the VA in the 48 contiguous States.

Fourth, authorize the furnishing of contract diagnostic services where necessary for the VA to determine a veteran's eligibility for, or the appropriate course of treatment in connection with, treatment of a non-service-connected disability at an independent VA outpatient clinic on the grounds that the treatment would obviate the need for hospital admission.

Title II: *Physician and Dentist Special Pay and other Pay Amendments.*—This title extends and makes modifications in the Veterans' Administration special-pay program to create greater incentives for physicians and dentists in certain scarce categories to agree to full-time service in the Department of Medicine and Surgery. Included in title II of the Committee bill are provisions that would:

First, extend for 1 year, through fiscal year 1978, the VA's authority to enter into special-pay agreements with physicians and dentists under section 4118 of title 38.

Second, require the Chief Medical Director to review annually his determinations, if any, to exclude from the special pay program any categories of physicians and dentists as to which there are no significant recruitment and retention problems.

Third, authorize the VA to enter into a new special-pay agreement for up to the full amount of special pay ($13,500) with a hospital Chief of Staff who is a full-time employee if the VA, by regulation, prohibits such an employee from receiving any additional remuneration from an affiliated medical school.

Fourth, authorize the VA to enter into a new special-pay agreement with any physician or dentist, for not to exceed 4 years, upon completion of the number of years of service specified in his or her prior agreement.

Fifth, authorize the Chief Medical Director, in order to help overcome problems in the recruitment and retention of full-time physicians and dentists, to make exceptions for certain categories of positions from the mandatory special-pay reduction in current law (equivalent to the cost-of-living increase made in October 1975) in the cases of employees in such categories who enter into agreements on or after October 1, 1977, to serve full time for a period of 4 years; provide that any physician or dentist currently serving under a special-pay agreement, who is in a category so excepted by the Chief Medical Director, may, after completion of 1 year of service under a current agreement, enter into a new 4-year agreement to serve full time under which the reduction shall not be made; and, if the employee fails, voluntarily or because of misconduct, to serve on a full-time basis the full 4-year period specified in an agreement, require the employee to refund the additional amount received by virtue of an exception from the reduction, unless such failure is due to circumstances beyond the employee's control.

Sixth, require the Chief Medical Director, prior to the execution of any special-pay agreements after October 1, 1977, to reevaluate the need for such agreements in light of the February 1977 executive level pay raise, and to report the results of that reevaluation to the Congress before October 1, 1977; and also authorize the Administrator, based on such reevaluations and in accordance with the Administrative Procedure Act (5 U.S.C. § 553(b)–(e)), to promulgate rules reducing the primary special pay in those categories for which the Administrator determines that such pay is not necessary to recruit and retain physicians or dentists.

Seventh, require the Administrator, upon the recommendation of the Chief Medical Director, (a) to establish and implement procedures to ensure that all health care personnel having direct patient-care responsibilities achieve competence in English sufficient for effective communication with patients and other staff members; and (b) where a VA facility serves a substantial number of veterans with limited English-speaking ability, to establish procedures to identify sufficient staff who are proficient in the appropriate language and in English and whose responsibilities shall include providing guidance to staff and patients in bridging linguistic and cultural differences.

Eighth, amend the Clinical Podiatrist and Optometrist Schedule in section 4107 of title 38 to reflect the increase in statutory rates of pay made by Executive Order 11941, effective October 1, 1976, and to provide that such rates will be increased by the same percentage as the Physician and Dentist Schedule when statutory pay systems are next adjusted under section 5305 of title 5, United States Code; and postpone conversion of podiatrists and optometrists from the title 5 general schedule to the title 38 Clinical Podiatrist and Optometrist Schedule until after such adjustments are made to the statutory pay systems, or November 1, 1977, whichever is earlier.

Title III: Health Care Program and Eligibility Amendments.—This title pro-

vides for the establishment of a new program of readjustment professional counseling, a new program in preventive health care for veterans for service-connected disabilities, and expanded treatment and rehabilitation programs for veterans suffering from alcohol or drug dependence or abuse disabilities. Included in title III of the Committee bill are provisions that would:

First, establish a new program to provide outpatient readjustment professional counseling for veterans and, where indicated, followup mental health services for veterans (including family-member counseling where necessary) to assist with readjustment problems arising within 4 years of discharge or 2 years after enactment, whichever is later.

Second, establish a new program in preventive health care in connection with the treatment of veterans for service-connected disabilities and for any veteran with a service-connected disability rated at 50 percent or more; and require the establishment of a health maintenance pilot program for veterans with varied types and degrees of service-connected disability to demonstrate the medical advantages and cost-effectiveness of furnishing comprehensive preventive health care services to veterans with service-connected disabilities.

Third, require the VA to provide a broader range of treatment modalities to veterans addicted to or abusing either alcohol or drugs, stressing the use in treatment programs of counselors who have recovered from such disabilities, authorizing the utilization of private halfway-house facilities on a contract basis; provide the VA with discretionary authority to furnish alcohol and drug treatment services to former service personnel with administrative discharges under other than honorable conditions who abused alcohol or drugs during active service; authorize the treatment, at VA expense, of a veteran who suffers from, and has a close family member who suffers from, an alcohol or drug dependence or abuse disability, in a community facility where the veteran and (not a VA expense) the family member can receive treatment together; direct the VA to carry out a program with other Federal agencies to promote the Federal employment of recovered drug addicts—as well as alcoholics—and to cooperate with and assist the Secretary of Labor in placing these veterans with private employers; and provide procedures for the treatment of active-duty service personnel suffering from alcohol and drug dependence or abuse disabilities in VA health care facilities during the last 30 days of service if they voluntarily, in writing, request such treatment.

Fourth, expand the definition of the term "discharge or release" in order to assure eligibility for veterans' benefits to one who has satisfactorily completed a period of service when he or she has not received a discharge or release at the completion of that period because of having agreed to extended active-duty service—an identical provision was by the Senate yesterday as section 4 of S. 1307 as amended by our committtee floor amendment.

Fifth, correct a minor, but clear, inequity in the statutory provision governing eligibility for the treatment of service-connected dental conditions and disabilities which are not compensable in degree by reinstating, after subsequent active service in the cases of persons with less than a 1-year break in service, the 1-year post-service period within which application must generally be made to the VA for such dental treatment.

Mr. President, in order that all Senators and the public may have a full understanding of the various provisions of this measure, I ask that there be printed in the RECORD at this point pertinent excerpts from the Committee Report No. 95–390 accompanying this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

DISCUSSION

TITLE I: CONTRACT CARE AMENDMENTS

Title I of the Committee bill would provide certain necessary clarifications of the circumstances under which the VA may furnish hospital care and medical services through private facilities under contractual arrangements. While addressing the same basic problems as the House-passed version of H.R. 5027, the Committee bill would make much more limited changes in current law in order to preserve the fundamental principles regarding the establishment of priorities within the VA health-care system by Public Law 94–581, the Veterans Omnibus Health Care Act of 1976.

H.R. 5027 as passed by the House would expand the circumstances under which veterans would be eligible for contract outpatient treatment (often referred to as "fee-basis care"), essentially by repealing certain amendments to chapter 17 of title 38 made by Public Law 94–581.

Background

Checks on the Growth in Outpatient "Fee-Basis" Care

Congress' interest in the fee-basis program was initially sparked by recent, extraordinary growth in expenditures for outpatient fee-basis care. As noted by the Committee in Senate Report No. 94–1206 accompanying S. 2908, the legislation later enacted as the Omnibus Act, total expenditures for outpatient fee-basis care had risen from $27.9 million in 1970 to $70.8 million in 1975. These expenditures were expected to increase to $90 million in 1976 and to $129.3 million in 1977—a 5-fold increase in just 7 years. (The actual total for fiscal year 1976 was $87 million.) Some of the growth was attributable to a sharp increase in expenditures for non-service-connected fee-basis care, from 1.6 percent of total fee-basis expenditures in fiscal year 1970, or $458,000, to 26 percent in fiscal year 1976, or $23.5 million.

The following table provides an updating—for fiscal years 1976 through 1978—of the table on outpatient visits and costs for fiscal years 1970 through 1977, which appeared at pages 63–70 of Senate Report No. 94–1206.

Source: Figures supplied by the Department of Medicine and Surgery.

In short, Congress in 1976 was concerned over two aspects of the fee-basis program: The extremely rapid growth in total expenditures for outpatient fee-basis care, and the growing proportion of fee-basis funds going for the treatment of non-service-connected disabilities.

In introducing S. 2908, Senator Cranston explained the bill's general purpose in this regard as follows:

I believe that the time has come to take a searching look at the present priorities within this enormous health care system, and to establish new priorities for the allocation of the VA's very large and very diverse health care capacity so as to redirect care and expenditures to the system's primary beneficiaries—veterans with service-connected disabilities. We have not been sufficiently sensitive to the needs of the service-connected veteran. The liberalization of eligibility requirements and the expanded capacity of the VA health care system in the past 7 years has primarily benefited veterans with nonservice-connected disabilities.

. . . I think that, after almost a decade of experience with such expanded eligibility, we must be very sure that service-connected veterans are receiving priority for their health care needs in the VA health care system.

As introduced and as enacted on October 21, 1976, the Omnibus Act was desgned, in

part, to achieve two goals: First, to consolidate the tremendous growth in the size and diversity of health care programs during the Vietnam era by increasing the efficiency of existing programs; and second, to provide first priority in health-care expenditures to veterans with service-connected disabilities.

It did so in two ways: First, by providing a standard for the payment by the VA for *any* fee-basis care—that is, where VA facilities cannot themselves furnish economical care because of geographical inaccessibility or because they cannot furnish the type of care required; and, second, by also limiting the provision of fee-basis care for non-service-connected treatment to only two circumstances—either for the non-service-connected condition of a veteran with a 50 percent or more rated service-connected disability, or of a veteran who after a period of hospitalization requires post-hospital followup care on an outpatient basis.

Outpatient "Fee-Basis" Care Under Section 612(g)

In fiscal year 1976, the last year for which actual figures are available, there were 601,053 fee-basis visits for the treatment of non-service-connected disabilities. Of that total 475,121 visits, or 79 percent, were by so-called "section 612(g) veterans"—veterans eligible, under section 612(g) of title 38, for outpatient care because they were in receipt of increased pension or additional compensation because they were in need of regular aid and attendance or were permanently housbound.[1]

By way of background, the Committee noted that in 1971 the number of section 612 (g) outpatient visits—staff and fee-basis—was only 26,111, one-third-of-one percent of the 7.7 million outpatient visits logged that year by the VA. But Public Law 91–500, which took effect in fiscal year 1972, broadened considerably the eligibility standards for outpatient care under section 612(g), so that all veterans in the above-mentioned "aid-and-attendance" and "housebound" categories qualified. The result was that in fiscal year 1972 the number of section 612(g) outpatient visits at VA-operated facilities soared to 219,871, eight-and-a-half times the number for the previous year. The number of visits paid for on a fee basis increased even more sharply—from 4,882 in fiscal year 1971 to 159,488 one year later—a more than 30-fold increase. Since then, the number of visits under section 612(g) has continued to grow rapidly. In fiscal year 1970, the total cost of outpatient care provided under section 612(g)—both at VA-operated facilities and on a fee basis—amounted to less than a quarter of a million dollars; for fiscal year 1976, the cost of fee-basis care alone under section 612(g) was $18 million.

Section 202(f)(3) of the Omnibus Act was designed to bring under control this enormous growth rate in expenditures for section 612(g) outpatient care. The Act added to section 612(g) the same limiting language—"within the limits of Veterans' Administration facilities"—that appeared in subsection (a) of section 612, the authority for the outpatient treatment of service-connected disabilities. The effect of this change was to revoke the fee-basis care eligibility of those eligible solely by virtue of section 612(g), namely those veterans being treated for other than a service-connected disability, who do not have a service-connected disability rated at 50 percent or more, and who are not in a post-hospital care status, but who are eligible for aid and attendance or household benefits.

Similarly, section 202(f)(2) of the Omnibus Act added the same language to section 612(f), and thus revoked fee-basis care eligibility for those who were eligible to receive fee-basis care solely on the grounds that outpatient care for them would obviate the need for their hospitalization.

Those provisions were fully explained on pages 75–76 of Senate Report No. 94–1206 accompanying S. 2908 as follows:

REFOCUSING FEE-BASIS OUTPATIENT CARE

Just as significant as the rapid growth in outpatient staff visits during the past decade is the exceptional growth and size of the fee-basis program. Neither the statute nor VA regulations distinguish very carefully between fee-basis outpatient care eligibility for service-connected and for non-service-connected veterans. As competition continues to increase for relatively limited resources in the VA system, it is imperative that such distinctions be drawn. The Committee bill provides a first step in that direction.

Under current law, section 601(4) of title 38 defines the term "Veterans' Administration facilities". Section 302(b)(2) and (3) of the Committee bill amends clause (4) to make clear that the VA may contract for fee-basis service only when VA or other Federal hospitals or clinics "are not capable of furnishing economical care because of geographical inaccessibility or of furnishing the particular type of care or services required". The effect of this new language is to limit the authorization of fee-basis service—for service-connected or non-service-connected disabilities—to those situations when regular VA hospitals and clinics (or other Federal facilities) are genuinely unable to provide the needed services themselves.

In addition to this general limitation on fee-basis service, the Committee bill, by section 104(a)(4), applies to the provision of fee-basis services to veterans for the treatment of non-service-connected disabilities a specific limitation—"within the limits of Veterans' Administration facilities". This phrase as to fee care for service-connected disabilities now appears in section 612(a). The addition of this phrase to 612(f) overrides a strained VA interpretation as to its present authority to authorize fee care for non-service-connected disabilities. (The term "Veterans' Administration facility" is specifically defined in present section 601(4) to include fee care only for service-connected disabilities. Since this term (which provides an authorization as well as a limitation) does not presently appear in section 612(f), which provides for outpatient treatment for veterans with non-service-connected disabilities, the VA has, in anomalous fashion, interpreted this absence to mean that fee-basis treatment is authorized under all circumstances for non-service-connected disabilities.) Apparently recognizing the extent to which this statutory construction, although perhaps literally correct, strains commonsense and could not have been intended by Congress, the VA has not broadly utilized such interpretation to provide contract care to non-service-connected veterans.

Thus, section 302(b)(2) of the Committee bill amends the definition of "Veterans' Administration facility" so as to limit fee-basis or contract care to seven specific categories of veterans, as follows:

1. Veterans requiring inpatient or outpatient treatment for a service-connected disability;

2. Those requiring inpatient or outpatient treatment for a disability which led to discharge from the Armed Forces;

3. Those requiring outpatient care who have service-connected disabilities rated at 50 percent or more, under section 612(f)(2) (as amended by section 104(a)(7) of the Committee bill);

4. Those requiring post-hospital outpatient care for disabilities—whether or not service-connected—under section 612(f)(1)(B) (for up to 12 months after hospitalization, except that such 12-month period may be extended to the extent necessary to treat the particular condition being treated and if other Federal reimbursement is not reasonably available to defray substantially the cost of such services);

5. Those requiring hospitalization for treatment of a disability for which the VA is not capable of caring within the resources available in its own health care facilities;

6. Women, veterans; and

7. Veterans residing in Alaska, Hawaii, or an American territory or possession.

In no circumstances, other than these seven specific ones, would fee-basis outpatient or hospital care generally be authorized A patient seeking outpatient care for a non-service connected disability, for example, would not be eligible for care on a fee-basis if care were needed solely to obviate the need for hospital admission, or to prepare the veteran for hospitalization.

At page 159 of the same Report, it was stated:

Subsection (b) of section 302 [of S. 2908, which became subsection (b) of section 202 of Public Law 94–581] amends section 601(4) (defining the term "Veterans' Administration facilities") of title 38 to (1) strike out the reference to the Administrator's "exclusive" jurisdiction over VA facilities in clause (A) of paragraph (4), a reference made obsolete by the addition of section 5007 to title 38 by Public Law 93–82; much Veterans' Administration property is now within the concurrent jurisdiction of local authorities; (2) make a conforming change in clause (C) of paragraph (4) to make it clear that the Administrator may contract with private facilities only when VA or other Government facilities are not capable of furnishing economical care because of geographical inaccessibility or of furnishing the care or services required; (3) authorize the provision of contract medical services to veterans suffering from non-service-connected disabilities, but only under two circumstances—(a) where such care is provided as part of post-hospital care under section 612(f)(1)(B), or (b) where the veteran has a service-connected disability rated at 50 percent or more and qualifies for medical services in a VA facility under section 612(f)(2) — —; and (4) make conforming and organizational changes in clause (C)(i) of paragraph (4).

The concepts underlying the Omnibus Health Care Act of 1976—that health care expenditures should be redirected in order to provide priority treatment to veterans with service-connected disabilities and that the full capacity of the VA's own facilities should be utilized—are essential to the future development of the VA health care system. Thus, the Committee did not agree to H.R. 5027 as passed by the House which would constitute a clear and unjustified retreat from those goals. As passed by the House, H.R. 5027 would simply repeal all the provisions in the Omnibus Act limiting outpatient fee-basis care, and return the law to its pre-1976 state. The sluice gate would again be opened for a virtually uncontrolled flow of fee-basis expenditures; and other medical programs might suffer with the resultant diversion of larger and larger sums to the fee-basis program, including particu-

[1] More precisely, section 612(g) authorizes outpatient care for veterans who are "in receipt of increased pension or additional compensation or allowance based on the need of regular aid and attendance or by reason of being permanently housebound, or who, but for the receipt of retired pay, would be in receipt of such pension, compensation, or allowance." In the interests of brevity, however, veterans thus eligible for outpatient care are refererd to as those who are in need of (or eligible for) regular aid and attendance or are permanently housebound (or eligible for housebound benefits).

larly fee-basis care for non-service-connected disabilities.

Problems in Implementation of Public Law 94–581 Provisions

The Committee, however, is not unmindful of some serious practical problems that have arisen in implementing the new provisions of the omnibus Act, particularly as they affect the approximately 90,000 veterans, who at the time of enactment of Public Law 94–581, were receiving outpatient care on a fee basis under section 612(g).

These problems are of two general types: The first type of problem pertains to the cases of individuals who, because of eligibility for regular aid and attendance and housebound benefits, were eligible for outpatient fee-basis care under section 612(g) prior to the enactment of Public Law 94–581, which revoked their eligibility and, as to whom no other statutory ground for such care may be available. The second type of problem relates to whether, in light of the extreme severity of their disabilities, it is both prudent and humane, to foreclose totally and absolutely their eligibility for outpatient fee-basis care under section 612(g).

With regard to the first problem—that of implementing Public Law 94–581 with regard to those whose eligibility for outpatient fee basis care was based on section 612(g)—the Veterans' Administration encountered substantial problems in applying the withdrawal of authorization on a prompt, orderly, and humane basis. Its difficulties were summarized in an April 8, 1977, memorandum from the General Counsel to the Chief Medical Director. In that memorandum, the General Counsel stated:

What is not so clear, however, is the manner in which the required determinations [of eligibility or ineligibility for outpatient fee basis care] should be made with respect to the veterans now in the system who were receiving care on a contract basis at the time of the law's enactment, or who have been furnished authorization for such care since that time because of a misunderstanding as to the effect of the new restrictive language....

...[T]here are a number of veterans receiving private contract care for their service-connected conditions, where the determinations (required in the statute) that VA-operated facilities are not able to furnish economical care, or are not capable of furnishing the necessary care, have not been made. Likewise, we also presume that there are a number of veterans eligible for medical care under 38 U.S.C. 612(f) who are continuing to receive care on a fee-basis even though the required determination has not been made. The same would hold true, we presume, with respect to the approximately 90,000 veterans presently in receipt of fee-basis cards on the basis of section 612(g) eligibility.

10. The 612(g) category especially concerns us because of the fact that many of those veterans who were given a fee-basis card because of the receipt of aid and attendance or housebound benefits are also eligible for the medical care they need under other provisions of law. For example, some may be eligible because the medical care they are receiving is for a service-connected condition, and thus would be authorized under section 612(a), assuming the required determination with respect to the inaccessibility or unavailability of the VA to furnish the necessary care could be made. Others in this section 612(g) category are in a post-hospital care status and thus may be authorized care under section 612(f), on a fee-basis, assuming the required determination concerning the availability of VA-operated facilities could be made....

In other words, it may be totally impossible to determine that veterans now receiving care on a fee-basis are not eligible for that care until each individual case is looked at, and a determination made that the particular veteran is not eligible under some other authority, or that VA-operated facilities are not available to him or are not economical. On the other hand, if we continue to provide care until we have looked at each case, we may ultimately find that some veterans do not meet the necessary eligibility criteria for fee-basis care, and, therefore, have been provided unauthorized care.

11. If, in enacting Public Law 94–581, the Congress would have provided either a specific savings clause applicable to those already in receipt of the then-authorized care, or an effective date for the new limitations far enough in the future to allow the case-by-case determination of eligibility which apparently is required, our task would have been easier, both from the practical, as well as the legal viewpoint. Unfortunately, neither of these two alternatives took place. On the other hand, there is certainly nothing to indicate any demand by the Congress that we cut off care to all veterans presently in receipt of such care on a contract basis until the necessary case-by-case determination could be made, especially where they may be authorized to receive care under some other authority. In this connection, it is now rather apparent that the major thrust of the Congress was directed to the prospective application of the new restrictions and little consideration was given, either by the Congress, or in the agency report, to the affect or impact on those veterans already receiving care on a fee-basis. We must assume, therefore, that Congress intended this agency to proceed to comply with the law in an orderly, reasonable, and humane manner.

12. . . . [W]e believe you would be within the broad perimeters of your legal authority if you were to immediately initiate determination that is required of each veteran presently in receipt of fee-basis care, whether he be eligible for care for his service-connected condition under section 610 or section 612(a), for post-hospital care under section 612(f), or for care under section 612(g). . . .

We believe you would be authorized to continue fee-basis care to any of these individuals until you have adjudicated their individual care to determine that they are, in fact, not eligible for the care they are in receipt of. For example, in the case of a veteran receiving care for a service-connected condition, before you terminate his fee-basis care, you would have to determine that such care could be provided within VA-operated facilities because of the availability of those facilities and their capability to furnish the needed care. In determining that capability, you may also take into consideration the necessity, in some cases, for continuity of a patient-physician relationship, which may be as much a part of the medical care needs of that particular veteran as would be the administration of a particular type of medication. Furthermore, in determining whether VA-operated facilities are not capable of furnishing economical care, we would assume that you would compare the fee-basis costs with the VA-operational costs associated with the care to be provided, as well as the transportation costs that might be involved, for those veterans eligible to receive travel assistance.

Resolution of section 612(g) problems

The Committee fully concurs with the General Counsel's April 18, 1977, sensible interpretation of the law to the effect that its implementation required careful case-by-case determinations of eligibility before the termination of care on a fee basis. Accordingly, the continued provision of out-patient fee-basis care by the VA pending the making of such individual determinations is retroactively authorized by section 102 of the Committee bill.

The Committee, however, is troubled by the fact that the Veterans' Administration did not cease to authorize fee-basis care on grounds of eligibility under section 612(g) for a period of more than 6 months after that authority had been revoked. Nevertheless, the Committee is fully cognizant of the often extremely necessitous circumstances facing the individual veteran-patient involved in this situation, and the Committee bill, therefore, provides the necessary retroactive authorization for such treatment during the period October 20, 1976, the day before the date of enactment of Public Law 94–581, through May 15, 1977, the date on which the Committee has been assured that issuance of new authorizations for outpatient fee-basis care under section 612(g) was terminated (by virtue of a May 9, 1977, telegraphic message to the field).

In addition, the Committee has determined that, in the cases of veterans eligible for aid and attendance or household benefits, many have received fee-basis care for several years and have developed important treatment relationships with their non-VA physicians and that, in other cases, these veterans and their families may have made substantial adjustments in their living situations in reliance upon the continuation of such arrangements. In recognition of these factors, the Committee bill includes a "grandfather" provision which authorizes the continuation, for a period of at least 1 year from the date of enactment, of the furnishing of such care to veterans who at any time during the October 20, 1976, through May 15, 1977, period were receiving such care.

The Committee bill also provides authority for the continuation of contract care in such cases when the Chief Medical Director finds, on a case-by-case basis, that a longer continuous period is required to complete the course of treatment for a particular disability, that the continuation of fee-basis care is medically more desirable that treatment in a VA-operated or other Government facility, and that no other grounds for treatment on this basis exists under title 38.

The Committee believes that the Veterans' Administration, in the course of this phasing out of broad eligibility for outpatient fee-basis care under section 612(g), must be very careful to explore alternative grounds for the provision of outpatient care on a contract basis and to provide fully adequate advance notification of the possible discontinuation of such care. Thus, the Committee bill requires that the VA insure that each veteran for whom fee-basis care is continued under the above-described "grandfather clause" is individually informed of his or her rights to such care under the bill and the relevant provisions of title 38; and, prior to any discontinuation of care on a contract basis, that the VA advise the veteran—on a personal-contact basis wherever possible—about the circumstances under which contract care may be authorized under title 38. In addition, the Committee bill require that, to the maximum extent practicable within 9 months after the date of enactment, determinations are to be made and communicated to each veteran regarding his or her eligibility for contract services under both the "grandfather clause" and title 38.

With regard to the permanent change in the law effected by Public Law 94–581 totally revoking the VA's authority to provide fee-basis care under section 612(g), the Committee has determined that in certain limited circumstances, due to the severity of the disabilities of the veterans concerned and the difficulty, in some cases, of providing

health care services to them through the VA's own facilities because of the frequent difficulties in transporting them to such facilities, some authority should be restored. On the other hand, the Committee does not believe that it is either prudent or necessary on the grounds of humane concerns to eliminate any and all restrictions on the provision of fee-basis care even in these instances. Where the veterans' residence is convenient to a VA facility that is equipped and staffed to respond to that veteran's medical needs, the VA should make every effort to provide the necessary care directly. Moreover, the Committee does not believe it equitable or appropriate to authorize fee-basis care for the treatment of non-service-connected disabilities under section 612(g) without regard to the general preconditions to fee-basis care which exist by law for the treatment of service-connected disabilities—that VA-operated or other Government facilities be incapable of providing the required care or, because of geographic inaccessibility, of providing such care in an economical fashion. Thus, section 101(1) of the Committee bill provides that, if the general conditions on the provision of contract care are satisfied, veterans eligible for regular aid and attendance or housebound benefits may be provided care on a contract basis if, on the basis of a physical examination, it is determined that "the medical condition of such veteran precludes appropriate treatment in" a VA-operated or other Government facility.

Other contract care issues

Lack of Capability Either To Furnish Economical Care Because of Geographic Inaccessibility or To Furnish the Care or Services Required

In the course of the April 27, 1977, hearing on H.R. 5027, the Committee noted certain problems in the implementation of the new general limitation on contract care—applicable to both service-connected and non-service-connected disabilities—under section 601(4)(C) of title 38, as amended by Public Law 94–581. The new general limitation authorizes contract care only when VA-operated facilities or other Government facilities for which the Administrator has contracted "are not capable of furnishing economical care because of geographic inaccessibility or of furnishing the care or services required."

With regard to "geographical inaccessibility", the Committee is concerned that implementation not be immutably based on a fixed distance from a VA or other Government facility. Rather, guidelines in this respect should take into account the nature of the particular disability involved so that the difficulty and costs of travel for a particular veteran to and from the facility in question and the number of such trips which may be necessary are considered. Thus, veterans with disabilities which make travel difficult and expensive could properly be furnished contract care and services more often than a flat mileage requirement would allow.

Also, with regard to the other condition—that VA-operated or other Federal facilities "are not capable of furnishing the care required"—the Committee believes that it must be recognized that not all VA and other Government facilities can properly treat certain disabilities, such as spinal cord injuries. Thus, despite the fact that a veteran resides within an area geographically accessible to a VA hospital, contract care would still be permissible if that facility is not fully capable of providing treatment for the disability in question.

At the April hearing, the Chief Medical Director, Dr. John D. Chase, in response to a question from the Chairman, expressed basic agreement with the principles discussed above.

In view of the foregoing discussion, the Committee sees no need for legislation amending section 601(4)(C) in this regard.

Alaska and Hawaii

As previously noted, section 202(f) of Public Law 94–581 revoked the VA's authority to provide outpatient contract ("fee-basis") services for the treatment of non-service-connected disabilities on the grounds that such services would "obviate the need of . . . hospital admission". The obvious effect and intent of this revocation was to require that all such "obviate" care be provided through the VA's own and other Government facilities. In Alaska and Hawaii, however, the VA has no hospital facility of its own and provides outpatient care only through relatively small clinical facilities; and, as the VA witnesses at the April 27, 1977, hearing testified, travel to and from those clinics in Alaska and Hawaii is extremely difficult for veterans in need of health care services because of transportation difficulties arising out of the unique geographic characteristics of those States.

Accordingly, section 101(2) of the Committee bill restores, at section 601(4)(C)(v) of title 38, authority for the VA to provide "obviate" care on a contract basis to veterans with non-service-connected disabilities in those States. This authority and the authority to furnish contract hospital care are conditioned on satisfaction of the revised requirement that the annually determined hospital patient load and incidence of the provision of medical services for veterans hospitalized or treated by the VA in each such State be consistent with the level of such care and treatment within the 48 contiguous States. This limitation is intended to insure that the VA's resources are not provided inequitably among veterans in various parts of the country. It modifies the existing provision, in section 601(4)(C)(v), under which contract hospital care is authorized for veterans in the noncontiguous States "except that the annually determined average hospital patient load per thousand veteran population hospitalized at Veterans' Administration expense in Government and private facilities in each such noncontiguous State may not exceed the average patient load per thousand veteran population hospitalized by the Veterans' Administration within the 48 contiguous States . . .".

Thus, in addition to extending the coverage of this type of limitation to certain contract medical services, the basis of the limitation has been changed from "average patient load" equivalency to a requirement that the level of care and services "be consistent with" that which is provided in the 48 contiguous States. This change reflects the Committee's view that equitable considerations do not require holding the level of care and treatment to the average in the 48 contiguous States before contract hospital care and outpatient treatment, respectively, may be furnished for the treatment of non-service-connected disabilities. Rather, the Committee believes that, for these purposes, the level of care and treatment within and without the 48 contiguous States should be "consistent" to the extent that as long as the level of care outside those States does not exceed the highest level being provided in any one of those States. In other words, the authority to provide "obviate" care on a fee-basis, should, in the Committee's view, be provided only where the overall level of outpatient services would not be higher than that which is being provided in each of the 48 contiguous States.

Puerto Rico

In the course of its review of contract hospital and medical services, the Committee noted that the limitation discussed above in section 601(4)(C)(v) on the permissible level of hospital care on which provision of contract hospital care authority is conditioned does not apply to the Commonwealth of Puerto Rico or to the territories or possessions of the United States. Also, the Committee learned that there is a substantial likelihood that (although specific figures in this regard could not be provided by the VA) a significant amount of outpatient "obviate" care on a fee basis has been provided in recent years to veterans in Puerto Rico. As previously indicated, the Committee believes that contract hospital or outpatient care for non-service-connected disabilities should generally not be authorized where the overall level of hospital or inpatient care exceeds the level of care being provided in the State having the highest level of such care. With no such limitation, it appears that an inequitable distribution of resources can occur, without adequate justification, in favor of veterans living in the possessions or territories or in the Commonwealth of Puerto Rico. Thus, the Committee bill amends that provision to include the territories and possessions.

However, after careful analysis of the situation in Puerto Rico, the Committee believes that it would be unwise to place such a condition on the furnishing of contract hospital care and medical services in the case of Puerto Rico. In fiscal year 1976, there were 1,866 outpatient visits per 1,000 veterans in Puerto Rico, compared with an average 547 per 1,000 in the 48 contiguous States, 1,704 in the District of Columbia and 885 in the highest of the 48 contiguous States, Arkansas. With respect to hospital care, the average daily census per 1,000 veterans hospitalized at VA expense in Puerto Rico was 7.05, compared with 2.70 in the 48 contiguous States.

The primary justification for the exception of Puerto Rico from such a limitation is the extensive poverty in the Commonwealth. For example, according to 1970 census data, the median income per veteran-headed family in Puerto Rico was $5,425 per year in 1969, which was approximately $2,700 less than the lowest figure for any State, Arkansas, $8,141; and slightly more than 8 percent of all veterans in Puerto Rico are receiving a veteran's pension (which is provided on a needs basis) as compared to 3.4 percent of all veterans worldwide.

In addition, there was some concern expressed by the VA regarding the adequacy of non-VA, public medical facilities to which veterans would have to be referred if VA medical services in the Commonwealth were substantially reduced. For example, approximately 40 percent of the publicly operated hospitals in Puerto Rico do not meet minimum HEW standards and there are some deficiencies under HEW standards in the remaining 60 percent. Also, it appears that very few veterans being provided care through the VA in Puerto Rico have financial access to private medical care through insurance benefits. In a survey conducted during the week of March 23–29, 1975, of 295 admissions to the VA hospital in San Juan, it was discovered that only 3.7 percent of those veterans had private insurance coverage.

Moreover, based on presently available information, it appears to the Committee that the VA's only hospital in Puerto Rico, the San Juan VA Hospital, is being fully utilized for veterans whose need for hospitalization is clear and that the San Juan hospital is clearly incapable of meeting the existing demand for care. The indicators of this are that the San Juan VA Hospital receives a higher number of applications per year than any VA hospital in the United States; that the acceptance rate of applications at the San Juan Hospital—49 percent—is far below the average of 81 percent for all other VA hospitals; and the occupancy rate at the San Juan hospital is 92.9 percent, which is among the highest occupancy rates in the VA hospital system. Also, at least 5 States have a higher

ratio of VA hospital beds per 1,000 veteran population than the ratio of 4.4 beds per 1,000 veterans in Puerto Rico—South Dakota, 11.33; Wyoming, 10.40; Arkansas, 6.49; Alabama, 5.69; and Mississippi, 5.50.

Also relevant with regard to the relatively high demand for VA hospital and medical services in Puerto Rico is the fact that 11.8 percent of all veterans in Puerto Rico receive compensation for service-connected disabilities, compared with 7.7 percent of veterans in the United States. Veterans receiving compensation can be expected to require care more frequently and also generally to be eligible for a broader range of VA health care services than are other groups.

The statutory clause in question, whereby contract hospital care and contract outpatient medical services for "obviate" care for non-service-connected disabilities are authorized in Puerto Rico, the territories and possessions of the United States, and Alaska and Hawaii, would expire on December 31, 1978. Thus the basic authority, together with the exception of Puerto Rico from the level of care and treatment limitations set forth in that provision must be reviewed again next year. The Committee expects, because of the reporting requirements discussed below, to have more detailed information on which to base its judgment at that time.

Contract diagnostic services

Amendments made by Public Law 94–581 to chapter 17 contract care and treatment provisions have given rise to one further question which the Committee has determined requires legislative clarification. Section 202(b) of that law revoked the VA's authority to furnish outpatient treatment by contract ("fee-basis") for non-service-connected disabilities where that treatment would obviate the need for hospital admission. The VA retains, of course, the authority to provide at its own facilities outpatient "obviate" care for the treatment of non-service-connected disabilities of eligible veterans.

In determining whether grounds for the provision of such outpatient services at VA facilities exist in particular cases, extensive diagnostic workups are frequently required, including, for example, x-rays, electrocardiograms, and various laboratory tests. Similarly, determining the appropriate course of treatment in connection with services being provided under the "obviate" authority may require diagnostic techniques beyond those which the physician alone can provide. Where outpatient care is provided at a clinic attached to a VA hospital, the hospital x-ray equipment and staff, clinical laboratories and other diagnostic equipment, facilities and staff provide the necessary backup services. But, when treatment is to be provided at independent VA outpatient clinics, these kinds of diagnostic services may be available only through private facilities with which the VA contracts.

In "obviate" care situations at these clinics, substantial doubt exists as to whether, because contract authority for "obviate" care no longer exists, the VA may purchase the diagnostic services necessary to determine the veteran's eligibility for "obviate" care at the VA facility and, in connection with the VA's provision of care in such a case, the proper course of treatment. It is clear to the Committee that contract authority to obtain such ancillary, diagnostic services must be provided in order for "obviate" care to be provided effectively and efficiently to eligible veterans at independent VA outpatient clinics. Thus, section 101(2) of the Committee bill adds a new subclause (vi) to section 601(4)(C) of title 38 to provide specific authority for contract diagnostic services in such cases.

Periodic Reviews

The Committee is concerned that at present the VA may not be reviewing with sufficient regularity those cases in which it has authorized long-term contract care arrangements, and that in a substantial number of cases a fee-basis authorization may continue long after the reasons which justified it in the first instance have ceased to exist.

Therefore, to encourage further optimal use of the VA's own facilities, section 101(3) of the Committee bill requires that the VA periodically review the necessity for continuing arrangements for contract care. These reviews would, the Committee expects, encompass a review of the veteran-patient's records in all cases (including a check for any change of residence bringing the veteran-patient closer to a VA facility) and, where indicated, a physical examination. Anticipating responsible action under this provision and recognizing the value in leaving such a provision flexible to allow for administrative and medical discretion in the timing and details of such reviews, the Committee has not specified how frequently or how thoroughly such reviews must be conducted.

Reporting Requirements

As noted in the above discussions regarding fee-basis care, there have been some instances in which specific relevant data regarding the provision of contract care and treatment have been difficult to obtain or unavailable under the VA's current recordkeeping practices. Therefore, in order to insure the availability of adequate data regarding the provision of such care and treatment, the Committee bill requires the Chief Medical Director to submit, through the Administrator, to the appropriate committees of the Congress by April 1, 1978, and annually thereafter, full reports on the implementation of the Committee bill, including a breakdown of the numbers of veterans provided treatment under the provisions of the Committee bill and of the numbers of veterans provided contract treatment, together with the average cost and duration thereof, in each State, territory, possession, the Commonwealth of Puerto Rico, and the District of Columbia in the various categories in title 38 provisions relating to contract care and treatment.

TITLE II: PHYSICIAN AND DENTIST SPECIAL-PAY AND OTHER PAY AMENDMENTS

Background

In 1975, the Committee was deeply concerned over the Veterans' Administration's problems in attracting and retaining highly skilled professionals for careers in the Department of Medicine and Surgery. At the time that legislation was considered, there was a $36,000 ceiling imposed on all Federal employees' salaries, with 4 out of 10 VA physicians having their salaries frozen at that level. Two-thirds of the offers of employment made to physicians in 1974 were rejected on the grounds that the salary was too low. In 1975, 44 VA hospitals lacked a full-time chief of psychiatry. The position of chief of radiology was either unfilled or filled on a part-time basis in 71 VA hospitals. Almost half of the hospitals in the VA system lacked a full-time chief of anesthesiology.

The Veterans' Administration thus faced a severe recruitment and retention problem. That problem had been aggravated by enactment of Public Law 93–274 which authorized the payment of special incentive bonuses to physicians and dentists in the Armed Forces and the Public Health Service. The bonus pay authorized for members of those two services enabled them to receive remuneration comparable to professionals in the community, and accelerated the departure of VA employees, or their conversion to part-time employment.

In order to provide greater pay comparability with the community and with other Federal services, in July 1975 the Committee reported S. 1711, the Veterans' Administration Physician Pay Comparability Act of 1975, the provisions of which were later incorporated, with certain revisions, in H.R. 8240, which was enacted as Public Law 94–123.

The enactment of Public Law 94–123 gave to the Administrator of Veterans' Affairs authority to pay special pay up to $13,500 per annum to eligible physicians and up to $6,750 per annum to eligible dentists employed by the Department of Medicine and Surgery. The special pay was premised upon the written agreement of the physician or dentist to complete a specified number of years of service, up to a 4-year maximum, with the Veterans' Administration.

The authority to enter into such agreements was to expire on October 11, 1976. However, Public Law 94–581 extended that authority to September 30, 1977.

Special-Pay Agreement Authority Extension

Section 201 of the Committee bill would further extend that authority to September 30, 1978.

The authority for entering into special-pay agreements has been extended for one additional year only (although the agreements may be made for up to 4 years) in the expectation that the specific legislation reflecting the findings of the study conducted by the Office of Management and Budget pursuant to Public Law 94–123 and submitted to the appropriate committees on December 29, 1976, will be submitted to Congress within the next year.

The Committee recognizes that legislation to provide special-pay bonuses to VA physicians and dentists is at best a temporary solution to the recruitment and retention problem. The Committee also recognizes that a more durable solution must be found for all Federal agencies and urges the Office of Management and Budget to submit this legislative proposal in a timely manner. While comparable pay among all Federal agencies is essential, the Committee believes any Government-wide program must respect the integrity of the Veterans' Administration personnel system and not impair the existing independent personnel authority of title 38 which has proven effective in meeting VA personnel management needs.

To date, since the enactment of Public Law 94–123, the physician and dentist staff of the Department of Medicine and Surgery has improved substantially in number, retention rate, and quality.

Table 2 shows the increase in the number of VA physicians and dentists since enactment of Public Law 94–123.

TABLE 2.—NUMBER OF VA PHYSICIANS AND DENTISTS

Employment status	June 30, 1975	Mar. 31, 1977	Percent change
Physicians (total)	14,840	16,670	+12.3
Full time	5,440	6,047	+11.2
Part time [1]	3,159	3,608	+14.2
Residents and interns	6,241	7,015	+12.4
Dentists (total)	1,073	1,128	+5.1
Full time	849	848	−.1
Part time [1]	22	24	+9.1
Residents and interns	202	256	+26.7

[1] Includes consultants, attendings, and intermittents.

Table 3 shows the increased retention ability of the VA since enactment of Public Law 94–123.

TABLE 3.—LOSS RATES FOR FULL-TIME VA PHYSICIANS AND DENTISTS

[Prior and subsequent to the Pay Act]

Item	Prior to the Pay Act, July 1, 1973 to Mar. 31, 1975	Subsequent to the Pay Act, July 1, 1975 to Mar. 31, 1977
Physicians:		
Average number on duty	5,322	5,826
Number of losses	1,378	1,239
Losses per 100 on duty per quarter	3.69	3.00
Dentists:		
Average number on duty	819	851
Number of losses	165	127
Losses per 100 on duty per quarter	2.87	2.13

Table 4 shows the recent increase in board-certified physicians in the Veterans' Administration, indicating data for U.S. medical graduates and for foreign medical graduates.

TABLE 4.—BOARD CERTIFICATION STATUS OF FULL-TIME VA PHYSICIANS RECEIVING SPECIAL PAY

Status	Mar. 31, 1976	Jan. 31, 1977	Percent change
Board certified (total)	2,735	3,030	10.8
U.S. medical graduates	2,033	2,191	7.8
Foreign medical graduates	702	839	19.5
Percent FMG's	25.7	27.7	
Not board certified (total)	2,665	2,649	−.6
U.S. medical graduates	1,498	1,409	−5.9
Foreign medical graduates	1,167	1,240	6.3
Percent FMG's	43.8	46.8	
All full-time physicians	5,400	5,679	5.2
U.S. medical graduates	3,531	3,600	2.0
Foreign medical graduates	1,869	2,079	11.2
Percent FMG's	34.6	36.6	
Percent board certified	50.6	53.4	

Table 5 shows the comparable data for part-time physicians.

TABLE 5.—BOARD CERTIFICATION STATUS OF PART-TIME VA PHYSICIANS RECEIVING SPECIAL PAY

Status	Mar. 31, 1976	Jan. 31, 1977	Percent change
Board certified (total)	1,204	1,394	15.8
U.S. medical graduates	1,001	1,141	14.0
Foreign medical graduates	203	253	24.6
Percent FMG's	16.9	18.2	
Not board certified (total)	672	688	2.4
U.S. medical graduates	451	443	−1.8
Foreign medical graduates	221	245	10.9
Percent FMG's	32.9	35.6	
All part-time VA physicians (total)	1,876	2,082	11.0

Foreign medical graduates	424	498	17.5
Percent FMG's	22.6	23.8	
Percent board certified	64.2	67.0	

Table 6 shows the comparable data for full-time dentists.

TABLE 6.—BOARD CERTIFICATION STATUS OF FULL-TIME VA DENTISTS RECEIVING SPECIAL PAY

Status	Mar. 31, 1976	Jan. 31, 1977	Percent change
Total	777	796	2.5
Board certified	92	93	1.1
Not board certified	685	703	2.6
Percent board certified	11.8	11.7	

Table 9, on page 37 provides a breakdown by specialty and shows major increases in the number of board-certified anesthesiologists, the specialty which had been cited as facing the most grievous shortages before enactment of Public Law 94–123, general surgery, and orthopedics among the surgical specialties, and infectious disease, gastroenterology, pulmonary endocrinology/metabolism, and family practice among the medical specialties.

The approximately 11-percent increase during the period March 31, 1976, to January 31, 1977, in the number of full-time physicians who are board-certified indicates a significant gain in the quality of the VA physician staff.

In light of such data, the Chief Medical Director testified at the July 1977 hearing:

"In my opinion, this extension is vital to our ability to sustain our recruitment and retention of highly qualified physicians and dentists and be able to compete reasonably well—on economic terms—with the non-Federal sector."

Despite the special-pay provisions, and the ability to receive additional remuneration for certain professional activities of an academic nature, salaries in the Veterans' Administration still lag behind comparable salaries in the community. Data presented in table 7 show that the average income of the VA physician, including special pay (and taking into account the increase effective February 27, 1977, resulting from the Quadrennial Commission's recommendations), is, in general, about $3,000 less than that for the comparable geographic full-time faculty physician. (Geographic full-time medical school faculty are faculty members who receive a fixed salary, all or most of which is paid from funds controlled by the medical school, but who may earn variable income from professional activities not under the direct auspices of the medical school.) The geographic full-time faculty physician is the category for which major recruitment efforts are made and in which most of the VA's physicians losses occur. Although full comparability with the community physician was not provided by Public Law 94–123, the data described above indicate the importance of extending the special-pay authority at this time.

TABLE 7.—COMPARISON OF 1976–77 COMPENSATION OF TEACHING VERSUS VA PHYSICIANS

Specialty	Faculty—all ranks [1]		VA full-time physicians receiving special pay [2]
	Strict full-time	Geographic full-time	
Anesthesiology	$54,100	$58,200	$50,100
Medicine	45,300	48,500	47,500
Pathology	44,600	52,200	52,600
Physical medicine	49,700	53,300	52,000
Psychiatry	45,400	48,100	48,200
Radiology	52,800	58,400	51,200
Surgery, general	54,800	66,800	51,200
All clinical sciences	47,400	54,700	51,500

[1] Includes 8 percent retirement—AAMC 1976–1977 report.

[2] Mar. 31, 1977, data for base salary (including increases resulting from Quadrennial Commission's recommendations and 7 percent retirement) and special-pay increment as of Jan. 31, 1977.

Special-pay program amendments

One of the major concerns expressed by witnesses during hearings on the Committee bill was the increased proportion of VA physicians who are serving part time. While the numbers of both full-time and part-time physicians have increased since enactment of Public Law 94–123, the number of part-time physicians has increased by a greater proportion—about 14 percent as compared to about 11 percent for full-time physicians.

The Committee bill would authorize the Chief Medical Director, for purposes of helping to overcome problems in the recruitment and retention of full-time physicians and dentists, to make exceptions for certain categories of positions from the mandatory special-pay reduction required by section 4118(d)(1) of title 38, under which there is deducted from the special pay for eligible physicians an amount equal to the 1975 cost-of-living increase, which became effective at the same time as the pay law. This cost-of-living increase was deducted from the special pay allowable to an eligible physician or dentist because Public Law 94–123 also revised the "Physician and Dentist Schedule" in section 4107 of title 38 to codify the 5-percent comparability pay increase which became effective in October 1975.

The average applicable amount is about $1,800.

To qualify for the additional special pay, physicians or dentists in the categories which the Chief Medical Director exempts from the mandatory reduction would have to agree to serve full time for a period of 4 years. Should an individual fail to complete the 4 years of service, he or she would be required to refund to the VA the additional amount made available by virtue of the exemption.

Persons in such categories who are already serving full time would (after they complete 1 year of service under an existing agreement) be able to enter into a new agreement for 4 years of service in order to be eligible for exemption from the mandatory reduction.

The Committee bill would also authorize the payment of up to the full amount of special pay (up to $13,500) to a hospital Chief of Staff who is a full-time employee, if the VA, by regulation, prohibits such an employee from receiving any additional remuneration from an affiliated medical school. In addition to encouraging full-time status, this provision is aimed at avoiding conflict-of-interest situations in which a Chief of Staff, the top-level physician hospital official, receives pay from the affiliated school with which he or she is called upon to deal on behalf of the VA on numerous professional and management issues.

Categories Excluded From Special Pay

Public Law 94–123 authorized the Chief Medical Director to determine certain categories of physicians and dentists as to which there is no recruitment and retention problem and exclude individuals in those categories from eligibility for special pay. To date, he has determined three general categories for which there is no recruitment and retention problem—health care facility directors, competitive research appointments, and senior and distinguished phyicians.

The Committee heard compelling testimony from representatives of the National Association of VA Physicians (NAVAP) about the importance of clinical researchers in maintaining high quality care in VA facilities.

In the first 10 months since the Chief Medical Director's decision to exclude clinical researchers, about one-eighth of the physicians and dentists holding clinical research positions resigned those positions and accepted other positions in DM&S in order to qualify for special pay. This rate of turnover among clinical researchers has impaired the continuity of the VA's medical research effort. In addition, the number of physicians and dentists applying for clinical research positions in 1976 has declined abruptly, dropping by 30 percent for the prestigious second- and third-level research positions. Discussions with researchers in the field indicate that the exclusion from special pay was an important factor in this decline.

Although at present there are more qualified new applicants than clinical research positions to be filled, the decline already noted, particularly as to the most senior clinical researchers, means that the VA may be losing its most experienced investigators during their most productive years. Many of the VA's finest staff doctors, chiefs of services, and hospital administrators have been initially recruited through these clinical research programs. These downward trends, if continued, thus pose a serious threat of a setback in the VA clinical research program from which it may take years to recover.

Further clouding the research picture is

the fact that the exclusion of clinical researchers from special pay comes after 2 years of real-dollar decline in the size of the VA medical research budget.

In real-dollar terms, the VA's health care research budget has shrunk since fiscal year 1974. During the last 3 fiscal years, research expenditures have grown by 15 percent, from $91.4 million to $105.1 million; during the last 3 calendar years, the Congressional Budget Office advises that inflation reduced the purchasing power of the research dollar by about 40 percent, for a net reduction in research funds of approximately 18 percent during that 3-year period.

In testimony presented to the Committee at the July 1977 hearing, the Chief Medical Director took note of the decline in funds made available for research projects to be carried out by the clinical researchers during this period, and stated that it would be difficult to attribute the decline in applications for research positions solely to the exclusion from special-pay eligibility.

Likewise, the number of physician hospital directors, since the determination was made to exclude them from special pay, has declined from 40 to 14. The physician hospital director, traditionally has been the main source of highly qualified individuals competent to take leadership roles in the Department of Medicine and Surgery. The severe reduction in their numbers may presage a serious problem for the future of the Veterans' Administration.

Table 8 shows the losses to the VA of individuals included in these ineligible categories.

These data are cause for concern. The Committee bill thus requires the Chief Medical Director to make a redetermination annually as to the existence of a recruitment and retention problem as to each category he has excluded from special-pay eligibility. The Committee believes this action will help insure against unexpected losses of highly qualified individuals.

The Committee was impressed by suggestions from representatives of the NAVAP that physicians willing to concentrate in fields such as spinal cord injury or alcoholism could be recruited more easily if further special incentive pay were made available for that purpose. The Committee believes this suggestion is worthy of consideration and urges the Chief Medical Director to conduct a survey of a sampling of current employees and new applicants to determine if additional pay would reduce the serious shortage of qualified personnel in these areas.

Impact of Executive Level Pay Raise

Data presented to the Committee indicate that the most recent executive level pay raise has resulted in an increase of a minimum of $29 a year to a maximum of $7,900. The average increase for the 3,007 full-time physicians in Chief grade was approximately $3,200 a year and their average special pay was about $7,800. The average increase for the 1,471 part-time physicians in that grade was about $1,880 a year, and their average special pay was about $5,100 a year.

The average increase for the 209 full-time physicians above Chief grade was approximately $6,600 a year and their average special pay was about $10,300.

For the 243 full-time dentists in Chief grade, the average increase was $3,200 a year, and their average special pay was about $3,700 per year.

The largest number of full-time personnel receiving the executive level pay increase were in the 10th step of Chief grade. There were 1,582 full-time physicians and 127 full-time dentists at that level. The average special pay for these physicians was $8,200 and the executive pay raise was $4,323, giving them a total average salary of $52,123. The average special pay for these dentists was $3,900 and the executive pay raise was $4,323, giving them a total average salary of $47,823.

For the most part, these increases do not appear to be out of line with pay received by comparable professionals in the community. However, the Committee believes a responsible approach to follow would be a reevaluation of the need for special-pay agreements in each physician and dentist category in light of the February 1977 executive level pay raise, and the Committee bill thus requires a report to Congress before October 1, 1977, of the results of such an evaluation. The Committee bill also authorizes the Administrator, based on such reevaluations and in accordance with the Administrative Procedure Act, to promulgate rules reducing the primary special pay in those categories in which the Administrator determines that such pay is not necessary to recruit and retain highly qualified physicians and dentists.

Other DM&S personnel amendments

Foreign Medical Graduates and English-Language Proficiency

Table 9 also indicates the growth in the number of physicians in specialties in the past year. Although there has been a steady growth in most of the specialties, it is accompanied by a slight increase in the number of foreign medical graduates in the various categories of specialty. The Committee recognizes that major efforts are being made by the Veterans' Administration to reduce that agency's reliance on foreign medical graduates, and urges that these efforts should be vigorously continued.

One of the major difficulties posed by the employment of foreign medical graduates is their inability to communicate effectively in English to the extent necessary to provide quality health care to the veteran patient.

The foreign medical graduates already in the Veterans' Administration Department of Medicine and Surgery (approximately 36 percent of full-time physicians and 24 percent of part-time physicians) represent a substantial proportion of the staff and, although the language barrier is not applicable in every case, it does exist to a troubling degree. To help reduce the communications problem, the Committee bill requires the establishment and implementation of programs and procedures to insure that all health care personnel having direct patient-care responsibilities have sufficient competence in English to communicate effectively with patients and other staff members. These programs and procedures shall include special language training and testing programs; however, the Committee does not contemplate a major cost commitment to undertake these programs. With the new requirements for newly immigrating foreign medical physicians under Public Law 94–484, the Health Professions Educational Assistance Act of 1976, calling for competence in oral and written English, this problem should be substantially alleviated in the future.

VA Hospitals Serving Populations With Limited English-Speaking Ability

Conversely there are VA hospitals in which a substantial proportion of the patients have limited English-speaking ability. In these cases, linguistic and cultural sensitivities with respect to health, can present a barrier to effective health care. The Committee bill would require that in those facilities procedures be established whereby sufficient staff are identified who are proficient in the appropriate language as well as in English and are assigned responsibilities for providing guidance to staff and patients in bridging linguistic and cultural differences.

Clinical Podiatrist and Optometrist Schedule

The Committee bill amends the Clinical Podiatrist and Optometrist Schedule (and the section 4103 schedule with respect to the Director of Podiatric Service) in section 4107 of title 38 to reflect the increase in the statutory rates of pay made by Executive Order 11941, effective October 1, 1976.

Section 110 of Public Law 94–581 made a series of amendments to chapter 73 of title 38, United States Code, designed to enhance recruitment and retention of podiatrists and optometrists in the VA. Among the changes instituted were the creation of Clinical Podiatric and Optometric Services, the inclusion of podiatrists and optometrists within the title 38 personnel and pay system, and the creation of grade levels for these employees. The rates of pay that were set by Public Law 94–581 for the various grade levels of podiatrists and optometrists were equal to those which had been established for the equivalent grade levels (the bottom five) of the Physician and Dentist Schedule which were in effect while the legislation was being drafted. During the pendency of this legislation, Executive Order 11941, effective October 1, 1976, was issued which adjusted the statutory rates of pay which were then in effect. Because Public Law 94–581 was not passed and signed into law until after that date, the change in the rates of pay which had been accomplished by the Executive order could not affect a Clinical Podiatrist and Optometrist Schedule not then in effect. The result was that, at the time of enactment of Public Law 94–581, the new pay schedule for podiatrists and optometrists in the title 38 personnel pay system was already out of date and below the schedule for physicians and dentists, despite the fact that Congress had indicated its intent that the equivalent grade levels of the two schedules should have the same rates of pay.

The Committee bill would restore the Clinical Podiatrist and Optometrist Schedule grade level pay rates to the levels originally intended in Public Law 94–581, and would provide for payment of the intended increases retroactive to October 21, 1976, the date of enactment of Public Law 94–581.

For reasons of technical feasibility regarding the accomplishment of the necessary pay adjustment, the Committee bill would prohibit the conversion of podiatrists or optometrists from employment under the title 5, Civil Service Commission General Schedule, to the title 38 pay schedule and system until after the rates of statutory pay are next adjusted under section 5305 of title 5, or November 1, 1977, whichever is earlier. This prohibition is necessary to prevent conversion at the pay schedule in current law which would not achieve the purposes of the amendments made by Public Law 94–581 or the Committee bill, and could result in inadequate pay levels—currently as well as with respect to the retroactive pay.

The Committee has considered the possibility of allowing conversions at a step increase that would have taken into account the intent of Public Law 94–581 with respect to appropriate pay levels for VA podiatrists and optometrists. The difficulty with that approach, however, is that when the expected statutory pay raise under section 5305 of title 5 becomes effective in October 1977, individuals who had so converted would receive a double increase. By postponing conversion until the statutory pay increase becomes effective, this potential inequity can be avoided; and retroactive pay would be based on the correct schedule for the actual period of service.

The Committee notes that the receipt of the differential between the two pay systems (for a period of approximately 1 year in some cases) retroactively in a lump-sum payment might substantially affect some individuals' tax liability. Therefore, the Committee urges the VA, at the time the lump-sum payment is made, to include a notice to each employee regarding the greater 1977 State and Federal income tax liability which the lump-sum payment may entail.

Finally, the Committee bill directs that the Clinical Podiatrist and Optometrist Schedule shall be increased by the same percentage as the Physician and Dentist Schedule when the rates of statutory pay systems are adjusted by the President in 1977 under section 5305 of title 5.

Cost

Based on the assumptions that 96 percent of the eligible physicians and dentists will enter into special-pay agreements during fiscal year 1978 and that the average special pay would be $7,244 for full-time physicians, $3,262 for part-time physicians, and $3,200 for full-time dentists, the costs for fiscal year 1979 would be $7.93 million. This amount would decrease in succeeding years as the agreements terminate to a level of $2.96 in fiscal year 1982, the last year in which an agreement can be effective under the 1-year extension of authorization for special-pay agreements in the Committee bill.

Other costs incurred by virtue of section 201 provisions would be minimal.

TITLE III: HEALTH CARE PROGRAM AND ELIGIBILITY AMENDMENTS

The Committee bill includes authority for three major expansions of VA health care programs: A new program of readjustment professional counseling; an expanded program of treatment and rehabilitation for individuals suffering from alcohol or drug dependence or abuse disabilities; and a new program of discretionary preventive health care services for veterans with service-connected disabilities, as well as establishment of a pilot program to provide comprehensive health care services in a health maintenance concept to not to exceed 10,000 veterans with service-connected disabilities.

Readjustment professional counseling

Section 301 of the Committee bill would establish a new program of initial readjustment professional counseling for veterans who served on active duty after the beginning of the Vietnam era (August 5, 1964), or

prior thereto in the Indochina conflict,[2] to assist with psychological readjustment problems, generally those arising within 4 years of discharge from active military duty.

Initial Counseling

Under section 301 of the Committee bill, the Administrator is to provide an in-house program of initial professional counseling for any eligible veteran who served in the Armed Forces after August 4, 1964 or prior thereto in the Indochina conflict, who generally meets the eligibility requirements of chapter 17, and who requests assistance with readjustment problems within 4 years from the date of his or her discharge or release from active duty. In connection with this counseling, the VA would also make a general mental and psychological assessment of the veteran (including, where necessary to make such assessment of the veteran, the participation of, and consultation with, the veteran's family or household members). Veterans discharged 2 or more years prior to the enactment date of the reported bill would have 2 years from that enactment date within which to apply for counseling under this section.

In providing counseling services under this section, the Chief Medical Director would be required to make maximum use of paraprofessional and voluntary workers, as well as veteran GI bill students under the veteran-student services work-study program, to assist in initial intake and screening. The Committee believes that much of the initial intake and screening can be effectively provided by trained paraprofessional personnel and volunteer workers who, as their experience accumulates, become especially sensitive to the readjustment needs and problems of returning and returned veterans. The vast majority of cases would not require extensive use of highly trained psychiatric or psychological personnel.

Followup Mental Health and Other Services

If the initial counseling indicates that followup mental health services are necessary to facilitate the successful readjustment of the veteran, the Committee bill provides for such services to be furnished on an outpatient basis as a part of medical services provided under the conditions specified in section 612(f)(1)(B) of title 38—post hospitalization. No financial need would need to be shown for the initial counseling, but the regular eligibility criteria under section 612(f)(1)(B)—including inability to defray expenses—would apply in the case of needed readjustment mental health services, except that the provision of the initial counseling would be deemed by law to satisfy the requirement for a prior period of hospitalization under that statutory provision.

Veterans who, on the basis of the initial counseling, are determined to be in need of hospital care or medical services, other than mental health services for a readjustment problem, would be eligible to receive the needed care in VA facilities only if otherwise meeting chapter 17 eligibility requirements; if not, they would be referred to non-VA facilities.

Readjustment Problems

The purpose of this readjustment counseling provision is to make fully available—and to encourage and facilitate the use of—the resources of the VA's health care system to those returning veterans who feel the need for professional or professionally supervised counseling to help them in their readjustment to civilian life. According to testimony from psychiatrists, psychologists, social workers, and counselors at both February 1976 hearings and June 1977 hearings, veterans of the Vietnam era have suffered significantly as the result of society's indifference and, in some cases, overt hostility to the sacrifices they made during their periods of military service. Large numbers of returning Vietnam veterans have experienced guilt, bewilderment, alienation, pessimism, tension, restlessness, and other symptoms of low grade readjustment problems. These problems frequently result in family difficulties, unemployment, alcohol or drug dependence, arrest records, and other forms of social and economic dislocation.

The view that the readjustment problems facing returning Vietnam veterans have been particularly acute had also been expressed in the congressional testimony of distinguished psychiatrists and other mental health professionals since 1969.

The Committee construes a "readjustment problem," as that term is used in section 301 of the Committee bill, to be a low-grade motivational or behavioral impairment which interferes with a veteran's normal interpersonal relationships, job or educational performance, or overall ability to cope reasonably effectively with his or her daily life problems. A readjustment problem does not usually amount to a definable psychiatric illness or mental health problem requiring extended professional services but could become one in the absence of early detection and counseling and followup care where necessary.

The experience of VA psychiatrists and other mental health professionals has been that veterans with readjustment problems and other mental health problems do not generally present themselves at VA hospitals or clinics for evaluation or treatment for upwards of 2 years and quite frequently 4 years after their discharge. It is postulated by many VA psychiatrists that the discharged veteran is reluctant to seek readjustment counseling due to the stigma attached to so-called "mental illness" and due also to an unwillingness to admit that he, the veteran, has "problems he cannot solve by himself." The veteran frequently doubts that the VA can help him and is uncertain about his eligibility for treatment. At the June 1977 hearing, Dr. William Van Stone, Assistant Chief, Psychiatric Services, Menlo Park Division, Palo Alto VA Hospital, testified:

"An NIMH-funded, 2-year followup study of 600 drug dependent veterans at our facility, revealed, for a 25- to 32-year-old age group, an average gap of 5 years between the first attempt at seeking VA help. A recent time of discharge from the service and the randomized sample of first admissions to our general psychiatric service revealed a range from zero up to 6½ years for veterans under 30 to make their first contact."

The Committee bill is especially intended to provide readjustment counseling to veterans of the Vietnam era. However, it would also provide readjustment counseling for post-Vietnam war veterans and certain pre-Vietnam era veterans who served in the Indochina conflict.

It has long been recognized that the "retirement syndrome" may be a complication of discharge from the Armed Forces for the career 20- to 30-year veteran. Often, the older veteran is displaced from the only life he or she has known. Such a veteran must seek out a new job and establish a new pattern of living. In this sense, the retirement syndrome is a readjustment problem. Thus, the Committee bill would make available, to the veteran retiree, as well as a veteran of a 2-year tour, counseling to help him or her bridge the gap between military and civilian life, because in any grouping of persons discharged or released from active duty service, some may face significant readjustment problems. Life and work in the military is very different from that in civilian society. Life in the military is regimented and one's duties are usually highly structured. The soldier is essentially well taken care of in return for service to the country. In addition to basic pay, he or she is provided food, clothing, and shelter, and health needs are met free of charge. Upon discharge, therefore, the new veteran is faced with many abrupt changes requiring adaptation in a complicated society.

Many young veterans, having entered the Armed Forces in their late teens, directly after high school or even before completing it, have never had to meet this challenge. As veterans and as adults, they are out in the civilian world on their own for the first time. Employment opportunities are scarce, and the military has not sufficiently prepared them for reentry into civilian life. Thus readjustment may be very difficult and some veterans are overwhelmed.

The Committee bill would provide the necessary readjustment counseling to help these veterans with the traumatic transition to civilian life. It is designed to help the veteran to become a productive member of society and assist him in stabilizing his personal and family relationships.

In the sensitive field of readjustment counseling, it is essential that services be available and accessible, on an outpatient basis, and that all unnecessary barriers to help be removed. The Committee bill is designed to achieve this result. A veteran recently discharged from active duty should know that such help is available, and that a request for readjustment counseling will be speedily honored, with a minimum of red tape, and, most importantly, without the need for prior hospitalization. Very few veterans who would receive readjustment counseling under this bill would require hospitalization due to their readjustment problems. (In fact, if any veteran did require hospitalization, they would probably already be eligible for hospital care under the existing title 38 financial need criteria. Significantly, most readjustment problems involve financial distress.) Although the veteran will not require hospitalization, however, prior hospitalization is in fact a requirement under present statutory criteria for the type of outpatient evaluation and counseling for readjustment problems proposed by the Committee bill unless—as is extremely unlikely under the present law—a condition is adjudicated to be service-connected, or outpatient care is deemed necessary "to obviate the need" for hospitalization. The Committee doubts that any fair application of the "obviate" criterion would lead to its use extensively in a psychiatric context and certainly, as stated above, not in the context of low-grade readjustment problems which have not developed into any form of identifiable psychiatric illness.

Therefore, the Committee bill makes specific provision for mental health services, where needed, to be provided on an outpatient basis.

The Administrator of Veterans' Affairs concurred generally with the above analysis at the hearings, where he officially endorsed a form of readjustment counseling.

Outreach

Under the Committee bill, the Administrator, acting in coordination with the Secretary of Defense, would also be responsible for notifying all veterans eligible for readjustment professional counseling under the new section 612A of their eligibility for such services.

Cost

Preliminary Committee estimates are that at the maximum 5 percent of the more than

[2] In this connection, the Committee observes that thousands of American military personnel served during a period, and in the midst, of heavy fighting in Indochina for several years before the August 4, 1964, Gulf of Tonkin Resolution. Therefore, in order not to exclude any such personnel who still may, as a result of that experience, be suffering from readjustment problems, the Committee bill includes within the coverage of the readjustment counseling program veterans who served in that conflict before American combat troops were heavily and directly committed to it.

7 million veterans who served in the Armed Forces after August 4, 1964 (the beginning of the Vietnam era), would request readjustment counseling, as would 5 percent of those veterans discharged in subsequent years. Thus, it is expected that about 354,400 current veterans would seek this counseling (204,500 in the coming fiscal year and 131,300 in fiscal year 1979), with an additional 25,000 veterans applying annually in subsequent years. The average number of visits per veteran would be between 2 and 3.

The use of paraprofessional personnel mandated by the reported bill would reduce the costs of the counseling program. In addition, the more restrictive authorization of reimbursement for beneficiary travel would apply to veterans seeking readjustment counseling and would keep travel costs to a minimum. Thus, projected annual costs for this program beyond the initial 2 years are estimated at around $1.3 million for counseling and $2.9 to $3.25 million for followup mental health care. The cost of followup mental health services would be to provide new staff at certain sites to insure outpatient mental health care capacity to meet the demand for services found to be needed as a result of the initial counseling.

Furthermore, it should be noted that the readjustment problems of veterans have already resulted and continue to result in great loss to the taxpayers in the form of VA pensions, unemployment benefits, welfare payments, and health care costs in the public sector where most veterans with readjustment problems have turned to receive counseling and mental health care, when in fact they have actually sought out help. Thus, it is probable that the provision of readjustment counseling and followup by the VA for these veterans would result in an overall tax savings to the public, both by reducing the cost of care in the public (non-VA) sector and by "rehabilitating" veterans so that they are able to function within the community, thus reducing the numbers of veterans receiving unemployment benefits and financial assistance of other sorts.

The Committee notes that it may be necessary to give the VA a period of leadtime such as for the preventive health care program (April 1, 1978), before this amendment to title 38 becomes effective, in order to permit necessary planning and the training of the necessary personnel, particularly volunteer and lay personnel.

Preventive health care programs

Routine Preventive Health Care Services

One of the major new departures in VA health care proposed in the Committee bill is contained in section 302 of the reported bill. The new subchapter VII which would be added to chapter 17 by that section would expand the scope of health care offered by the Veterans' Administration to certain veterans to include preventive health care services. These services would be available, as feasible. and appropriate, for all veterans suffering from a service-connected disability rated at 50 percent or more, and to any veteran in connection with treatment for a service-connected disability (that is, as part of a hospitalization or outpatient visit for that purpose). It is estimated that approximately 488,000 veterans have service-connected disabilities rated at 50 percent or more and that 2.2 million have some service-connected disability.

Currently, health care in the Veterans' Administration is generally defined by statutory language as services to treat an already existing disease or disability (except for a specific program for sickle cell screening and counseling in subchapter VI of chapter 17). This definition follows the traditional practice in the medical community of treating identified disease and alleviating existing pain. However, within the past decade or so, more and more thought has been given to shifting the emphasis in medical care toward the prevention of illness or disease. Many public health experts believe that such an emphasis would significantly improve health in the long run, and might also, at the same time, result in significant long-term cost savings for individual patients and for the Nation as a whole.

Strong support for preventive health programs was received from several witnesses including Mr. Lawrence W. Roffee, Jr., of the Paralyzed Veterans of America. Mr. Roffee stated:

"A preventive health care program will be of particular value to veterans with spinal cord injuries. A spinal cord injury is a very encompassing disability. Most parts and functions of the body are affected. Minor medical problems such as a bladder infection can quickly become a major medical condition. The problems are compounded by the loss of sensation with a spinal cord injury. Many so injured individuals cannot feel what is wrong with them. They cannot take their 'complaint' or illness to a doctor. Symptoms must be diagnosed by medical personnel who have experience with spinal cord injuries."

The Commitee bill, by authorizing the VA to provide only such preventive health care services as "are feasible and appropriate" and "necessary for providing effective and economical preventive health care" on a national or geographic basis, vests discretion in the Chief Medical Director in establishing the nature and mix of services to be furnished in the program, the schedule for phasing in various services, and the identification of those facilities best equipped to provide them.

The reported bill authorizes the VA to institute appropriate controls and carry out followup studies, which may include research, to demonstrate the medical advantages and cost-effectiveness of furnishing such preventive health care services. Research would seem to be a particularly important aspect of this new program since the VA is in an almost ideal situation to make a major contribution to knowledge in this field.

Among those preventive health services which the legislation suggests may be included are:

First: Periodic medical and dental examinations.—This does not mean an annual physical—a costly procedure which experience has shown does not insure freedom from serious illness. Rather, the Committee envisions, as one type of program at selected locations, preventive services packages geared to age groups as suggested in a report to the National Conference on Preventive Medicine by a prestigious task force, headed by Dr. Lester Breslow, Dean of the School of Public Health at the University of California at Los Angeles, who presented impressive testimony to the Committee in the 94th Congress on the value of a preventive health program to eligible veterans. The recommendations of the Task Force were further modified in an article written by Dr. Breslow and Dr. Anne Somers of New Jersey-Rutgers Medical School which appeared in the New England Journal of Medicine on March 17, 1977. The applicable recommendations as currently modified are:

Young Adulthood (18 to 24 Years):

Health goals—

1. To facilitate transition from dependent adolescence to mature independent adulthood with maximum physical, mental and emotional resources.

2. To achieve useful employment and maximum capacity for a healthy marriage, parenthood and social relations.

Professional services—

1. One professional visit with the healthy adult, including complete physical examination, tetanus booster if not received within 10 years, tests for syphilis, gonorrhea, malnutrition, cholesterol and hypertension, and medical and behavioral history. This visit may be provided upon entrance into college, the Armed Forces or first full-time job, but should be before marriage.

2. Health education and individual counseling, as needed, for nutrition, exercise, study, career, job, occupational hazards and problems, sex, contraception, marriage and family relations, alcohol, drugs, smoking, and driving.

3. Dental examination and prophylaxis every two years.

Young Middle Age (25 to 39 Years):

Health goals—

1. To prolong the period of maximum physical energy and to develop full mental, emotional and social potential.

2. To anticipate and guard against the onset of chronic diseases through good health habits and early detection and treatment where effective.

Professional services—

1. Two professional visits with the healthy person—at about 30 and 35—including tests for hypertension, anemia, cholesterol, cervical and breast cancer, and instruction in self-examination of breasts, skin, testes, neck, and mouth.

2. Professional counseling regarding nutrition, exercise, smoking, alcohol, marital, parental and other aspects of health-related behavior and lifestyle.

3. Dental examination and prophylaxis every two years.

Older Middle Age (40 to 50 Years):

Health goals—

1. To prolong the period of maximum physical energy and optimum mental and social activity, including menopausal adjustment.

2. To detect as early as possible any of the major chronic diseases, including hypertension, heart disease, diabetes and cancer, as well as vision, hearing and dental impairments.

Professional services—

1. Four professional visits with the healthy person, once every five years—at about 40, 45, 50 and 55—with complete physical examination and medical history, tests for specific chronic conditions, appropriate immunizations and counseling regarding changing nutritional needs, physical activities, occupational, sex, marital and parental problems and use of cigarettes, alcohol and drugs.

2. For those over 50, annual tests for hypertension, obesity and certain cancers.

3. Annual dental prophylaxis.

The Elderly (60 to 74 Years):

Health goals—

1. To prolong the period of optimum physical/mental/social activity.

2. To minimize handicapping and discomfort from onset of chronic conditions.

3. To prepare in advance for retirement.

Professional services—

1. Professional visits with the healthy adult at 60 years of age and every two years thereafter, including the same tests for chronic conditions as in older middle age, and professional counseling regarding changing lifestyle related to retirement, nutritional requirements, absence of children, possible loss of spouse and probable reduction in income as well as reduced physical resources.

2. Annual immunization against influenza (unless the person is allergic to vaccine).

3. Annual dental prophylaxis.

4. Periodic podiatry treatments as needed.

Old Age (75 Years and Over):

Health goals—

1. To prolong period of effective activity and ability to live independently, and to avoid institutionalization so far as possible.

2. To minimize inactivity and discomfort from chronic conditions.

3. When illness is terminal, to assure as little physical and mental distress as possible

and to provide emotional support to patient and family.

Professional services—

1. Professional visit at least once a year, including complete physical examination, medical and behavioral history, and professional counseling regarding changing nutritional requirements, limitations on activity and mobility and living arrangements.

2. Annual immunization against influenza (unless the person is allergic to vaccine).

3. Periodic dental and podiatry treatments as needed.

4. For low-income and other persons not sick enough to be institutionalized but not well enough to cope entirely alone, counseling regarding sheltered housing, health visitors, home helps, day care and recreational centers, meals-on-wheels and other measures designed to help them remain in their own homes and as nearly independent as possible.

5. Professional assistance with family relations and preparations for death, if needed.

An effort was made in 1975 to price the costs of such a program. That estimate, based on fee-for-service fees in the District of Columbia, was $15 per capita per year, assuming 100 percent participation of all eligible persons.

Second: Patient health education.—As medical science has conquered some of the serious and widespread diseases of previous generations, such as diphtheria, typhoid, and tuberculosis, today's citizen is more susceptible to other major diseases, such as cancer and heart disease, as well as chronic diseases which are aggravated either by personal habits such as smoking, overeating, lack of exercise, alcohol abuse and drug abuse, or by environmental hazards, such as noise or pollutants. With a modest investment in health education programs, many experts believe, substantial progress can be made toward the control of these diseases. In addition, counseling as to diet and personal health habits should be an integral part of every patient contact with a health specialist. Patient health education including nutrition education) programs should be an integral part of a preventive health program and can achieve health benefits at a minimal cost.

Third: Maintenance of drug use profiles, patient drug monitoring, and drug utilization education.—Where clinical pharmacy services of this scope have been utilized, studies indicate that medication error rates have decreased substantially, that inappropriate drug utilization has been reduced, that adverse drug reactions have been averted, and that substantial dollar savings have been realized. Including these clinical pharmacy services in a preventive health program is important if the program is to deal with the high incidence of adverse drug reactions and interactions.

Drugs are responsible for approximately 10 percent of total health care expenditures in the United States. In calendar year 1976, the VA spent approximately $155 million on drugs and medicines. The effect of adverse drug reactions on the recovery of the veteran patient, as well as the possibility of long-term injury or disability resulting from improper prescription or utilization of drugs, requires greater focus in the provisions of VA health care services. Surveys of community hospitals have indicated that the incidence of adverse drug reactions is substantial. It is estimated by initial studies that from 3 to 6 percent of all admissions to tertiary-care hospitals are due to adverse drug reactions, and that a minimum of 15 to 18 percent of patients at those hospitals suffer an adverse reaction subsequent to their admission. Since these adverse reactions may well on the average double the patient's hospital stay, the unnecessary costs involved are overwhelming.

As the number and complexity of available prescription and nonprescription drug products increases, and the use, abuse, misuse, and overuse of drugs continues to rise, the need for improved pharmacy services becomes more urgent.

In recognition of the complexity of prescription drug management, the health community has developed a relatively new professional—the clinical pharmacist. Clinical pharmacy training prepares the pharmacist for greater responsibility in direct relationships with the patient in drug abuse, toxicity, and nonprescription drug advice as well as in closer working relationships with physicians, dentists, and other health professionals. The specialized training of the clinical pharmacist is designed to enable that professional to relieve a great many of the demands made upon physicians, freeing the physician for duties most appropriately performed by such a highly trained professional.

A study, carried out in 1972, entitled "An Application of Clinical Pharmacy Services in Extended Care Facilities," evaluated the impact of clinical pharmacy services on the apparent quality of patient care and cost-effectiveness of drug therapy in skilled nursing facilities. Three 91- to 99-bed facilities in Los Angeles County, which met a set of predefined criteria, were randomly selected for the study. A pharmacist with clinical training and experience was appointed to provide optimal pharmaceutical services and care in order to bring about more safe and rational use of drugs in these facilities. Pre-study and post-study evaluations were conducted and data were analyzed by expert consultants. The results of the study were as follows:

1. The medication error rate was reduced by 50 percent.

2. Drug utilization was reduced by 20 percent through discontinuation of unnecessary and inappropriate drugs.

3. Sixty or more clinically significant adverse drug reactions were detected and/or prevented.

4. A cost-saving of $80,000 a year was projected in the three facilities studied.

5. The pharmacist functioning in this capacity was well received by the patients, physicians, administrators, and especially by the nurses.

A similar study has been proposed for several years, but not yet implemented, for the VA outpatient clinic in Los Angeles. The objective is to evaluate the quality of patient care and cost effectiveness of drug therapy through the monitoring and evaluating by clinically trained pharmacists of drug regimens for ambulatory care patients.

Preliminary data for that walk-in clinic indicated that 30 to 40 percent of VA patients who visited there were considered to be prescription drug-related. The main reasons for visits to the clinic by this group of patients were:

1. Refill or renewal of prescriptions.

2. Request for drug information or counseling because the patients were confused in taking their prescribed medications or complained of some undesirable responses.

3. Seeking new treatment or new medications.

A clinically trained pharmacist was appointed to counsel this group of patients and to review their drug utilization from October 1, 1974, to December 31, 1974. This study concluded that 27 percent of patients complied with the prescribed medication directions; 39 percent overutilized medications; 31 percent underutilized medications; 7 percent had excessive prescribed dosages; 2 percent had inadequate prescribed dosages; 2 percent had inappropriate prescribed dosing intervals; 7 percent had possible or probable interactions from multiple prescribed drugs, 17 percent had possible or probable adverse drug reactions; and 23 percent had inappropriate combinations of drugs or duplications.

The Committee feels strongly that the VA should assign a high priority to carrying out this study with available health services research funds.

A special study of patients at this clinic who were seen by more than one physician was conducted in the last quarter of 1976 and produced equally discouraging results. It found that 29.7 percent of patients complied with the physician's prescription directions; 48.3 percent underutilized the medication; 22 percent overutilized the medication; 50 percent received duplicate prescriptions; 25 percent had inappropriate combinations of drugs; 18.3 percent had inadequate dosage prescribed; 5 percent had inappropriate dosing intervals; 33 percent had potential drug interactions; and 3.3 percent had excessive dose prescriptions. A clinical pharmacist is currently following up with these patients, counseling them on proper drug use, and notifying physicians of duplications and other inappropriate prescriptions given the patients.

These findings indicate the dimensions of the demand that can be made upon one VA facility by veterans with drug-related problems. In the Committee's view, this problem can be substantially corrected by greater emphasis on comprehensive clinical pharmacy services within a preventive health program, and such services should be implemented at a number of facilities on a pilot basis to test their cost-effectiveness and total health care impact.

Fourth: Routine vision testing and eye care services.—These services are important not only for early detection of eye disease, but also for detecting other illnesses, such as diabetes or cholesterol imbalance. Furthermore, since the average veteran is now an older veteran—over 13 million are World War II veterans with a median age of 55, and almost one million are World War I veterans of at least 75 years of age—preventive vision services could improve daily living for many veterans. These services can be provided very effectively by an optometrist—a professional much underutilized by the VA. The Committee does not envision the provision of eye glasses or contact lenses as part of this service.

Other Preventive Health Care Services: Of course, a total preventive health care program should also include immunizations, prevention of musculoskeletal deformity or other gradually developing disabilities of a metabolic or degenerative nature, genetic counseling, and early intervention in mental illness, including family counseling.

It should be noted that the Committee bill provides for the furnishing of preventive services only to the extent the Administrator determines them feasible and appropriate. The Congressional Budget Office estimates discussed below are based on a reasonable preventive care program which can detect diseases having serious implications for the patient if left undetected—The costs involved are a wise investment in terms of potential future debilitation of veterans and demands on VA resources.

Comprehensive Health Maintenance Pilot Program

In addition to authorizing a preventive health care program for the approximately 500,000 veterans with a service-connected disability rated at 50 percent or more and for veterans being treated for service-connected disabilities, the Committee bill would mandate the VA to carry out an experimental health maintenance pilot program in comprehensive health care services, including a research component. The Committee believes enrollment in such a pilot program should, to the maximum feasible extent, be made available to service-connected veterans in accordance with the priorities for outpatient services specified in section 612(1) of title 38 in a VA hospital on an inpatient or outpatient basis.

The reported bill directs that the pilot program be undertaken as a controlled, scientifically valid study (including control groups) of the provision of such HMO-type service to no more than 10,000 veterans with service-connected disabilities, and limits the pilot program to a 10-year period.

The findings from such programs should have broad application to health care not only in the Veterans' Administration, but also in the medical community at large. In view of the likelihood of some form of national health insurance program in the next few years, the experience gained from a preventive health program operating on a scale of sufficient size, as is possible in the Veterans' Administration, should provide a good estimate of the achievable benefits of many preventive health measures.

Utilization of Interdisciplinary Health Care Teams

The Committee bill directs that interdisciplinary health care teams be utilized, to the maximum extent feasible, in providing preventive health care services and in carrying out the pilot HMO-type program, and specifies that these teams should be composed of various professional and paraprofessional personnel such as nurses, pharmacists, psychologists, podiatrists, optometrists, technicians, physician assistants, and expanded-function dental auxiliaries. In a system as large as the VA, which is generally not bound by the restrictions of State licensing laws regarding paraprofessionals, an opportunity exists to implement a major program of this nature, utilizing paraprofessionals in new roles and in ways which can reduce the demands made upon the more highly trained professional. Legislation enacted as Public Law 94–123, the Veterans' Administration Physician and Dentist Pay Comparability Act of 1975, enables the VA to hire physician assistants and expanded-function dental auxiliaries on a competitive basis with the community. The Committee expects such personnel to play a substantial role in the new preventive health care programs.

Lead Time for Planning

To provide the necessary lead time for planning the basic preventive health care program and designing the pilot program, the Committee bill postpones the effective date of the preventive health care service program until April 1, 1978, and the implementation date of the pilot program until October 1, 1978.

Cost

The Congressional Budget Office estimates the costs of the preventive health care program for service-connected veterans at $2.85 million during fiscal year 1978, based on the provision of *three* selected preventive services to each eligible, participating veteran plus hospitalization costs based on a rate of 1 percent detection of morbidity based on the three screening tests. The three services envisioned would be electrocardiograms and hyptertension screening for the detection and early diagnosis of heart disease and other cardiac conditions, tonometry for glaucoma detection, and a proctoscopic examination for detection and early treatment of rectal cancer and other colonic disorders. The cost of providing these three simple services would be $8.25 per veteran. The projected first year cost of $2.85 million would be made up of $1.44 million for the preventive health services, $0.53 million for the induced hospitalization, and $0.88 million for the cost of followup.

The Congressional Budget Office estimates that the cost of providing health care under an HMO-type configuration pursuant to the pilot study would be $689 per year per individual in fiscal year 1979, the first year of the pilot program. With 10,000 individuals in the control group and 10,000 in the HMO, the costs are estimated at $7.42 million the first year, increasing to $8.74 million the fourth year (1982), when inflation is taken into account. This estimate includes $530,000 a year to cover the costs of generating, maintaining and analyzing the data developed in the pilot program.

Drug and alcohol treatment and rehabilitation

Neither drug addiction nor alcoholism are new problems to the Veterans' Administration. For years, the VA has treated the medical consequences of both drug abuse and alcohol abuse in its hospitals. Furthermore, the VA has long recognized alcoholism as a treatable condition. Alcoholism treatment units have been established at 78 VA medical facilities, with an average per-unit funding level of $246,000, and almost 100,000 veterans received treatment for alcoholism and alcohol-related problems in fiscal year 1976. The Department of Medicine and Surgery, according to the VA's planning document of November 14, 1974, planned to activate an additional 32 alcohol dependence treatment programs during fiscal year 1976. However, the VA has activated only seven of these programs to date.

There are 53 VA special drug treatment units operating as of August 1977, with a capacity to treat approximately 29,500 patients annually and an average per-unit funding level of $220,000. Almost $112 million is included in the fiscal year 1978 medical care appropriation for substance abuse treatment programs.

A January 17, 1977, letter from the Administrator of Veterans' Affairs to Senator John McClellan, Chairman of the Senate Appropriations Committee, in which the Administrator responded to a report on VA alcohol treatment programs conducted by the General Accounting Office (GAO) and provided a progress report of the agency's plans to meet the deficiencies cited in the GAO report, explicitly recognized the importance of each facility (hospitals, domiciliaries, and independent outpatient clinics) having a substance abuse treatment and rehabilitation capability. In that letter the Administrator set forth a long-range goal to establish 91 additional units by 1985, with no additional units planned for fiscal year 1978, and 15 units planned for each of the next 3 fiscal years.

Despite the recent—although not sufficient—growth of the VA programs for treatment of drug and alcohol abuse, the VA is still limited in several ways from responding fully to the needs of the veteran addicted to drugs or alcohol.

Section 303 of the Committee bill would provide for comprehensive treatment and rehabilitation programs for veterans suffering from alcohol or drug dependence or abuse problems. The provisions of section 303 are comparable to legislation passed by the Senate during the 92d (S. 2108), 93d (S. 284), and 94th (S. 2908) Congresses. The Senate was unable to reach an agreement with the House on this legislation in any of those Congresses. The Committee bill reflects some changes which have been made to meet concerns expressed by the House Committee on Veterans' Affairs as well as the Veterans' Administration with regard to those bills.

The Committee bill would provide the VA with the legislative authority necessary to initiate a comprehensive program for the treatment and rehabilitation of veterans suffering from alcohol or drug dependence or abuse disabilities.

Drug Dependence and Abuse Treatment Needs

The problems of drug dependence and abuse continue to grow. The VA estimates there are 200,000 veterans suffering from drug dependence. Admissions for drug dependence treatment increased 12 percent for fiscal year 1976 as compared to fiscal year 1975. The VA advises that it expects to meet this increased need within existing program locations but with increased resources.

Alcoholism Treatment Needs

In a September 1975, report to Congress on the quality of the alcohol treatment programs provided in VA facilities, the Comptroller General of the United States found that the serious lack of DM&S staff and funds to operate alcoholism treatment and rehabilitation programs constituted a major problem. Other findings of the study were that some of the largest major metropolitan areas—where there are large numbers of veterans—lacked any VA alcohol treatment capacity. In addition, the study found that the availability of VA alcoholism services was not adequately publicized.

There is an extraordinary and increasing prevalence of alcohol-related admissions to the VA hospital system—officially estimated by the VA at one out of every ten admissions in fiscal year 1975, making alcoholism the most common of all listed admission diagnoses. But even more revealing are the results of a comparison between a 1970 and a 1973 census in VA health care facilities which included a special question to determine which bed-occupant patients were defined alcoholics or problem drinkers. Here are the startling results:

1. The proportion of defined alcoholics and problem drinkers increased from 1 out of every 5 patients in 1970 to 1 out of every 4 patients in 1973.

2. Almost 25 percent of Vietnam-era veterans in the 1973 patient census were diagnosed as defined alcoholics or problem drinkers, as compared to 13 percent in the 1970 census.

3. Within the 35–44 age group, 35.2 percent of all hospitalized veterans were defined alcoholics or problem drinkers in 1973, as compared to 26 percent in 1970.

These patterns have not improved in more recent years. In 1975, 19 percent of all discharges from Veterans' Administration hospitals were related to alcoholism. The October 1, 1975, VA hospital inpatient 1-day census showed that alcoholics or problem drinkers constituted 22.5 percent of the inpatient population; and in fiscal year 1976, 96,360 veterans were admitted to Veterans' Administration inpatient or outpatient facilities for treatment for alcoholism, a 5-percent increase over the previous year.

It must be noted that the disease of alcoholism is responsible for much of the total cost of administering VA hospitals and clinics. An extremely high volume of admissions to medical or surgical wards stems from alcoholism. This includes not only those patients admitted for detoxification (withdrawal) or "DT's" (delerium tremens) but also patients admitted for treatment of bleeding ulcers, liver failure, and inflammation of the pancreas, among other conditions. All too often the following cycle ensues. A veteran is treated and discharged without referral to an alcohol rehabilitation program. He returns to the community where he drinks again, redevelops bleeding ulcers (for example) and is readmitted to the hospital.

Clearly, whatever the exact statistics, the cost of alcoholism is high. Without adequate numbers of alcohol treatment and rehabilitation units, the alcoholic is doomed to continued readmissions due to recurring illnesses. The expenses of treating and rehabilitating the alcoholic in an effective manner are a worthwhile investment of VA resources and may, depending on the success of the program, lead to considerable savings in the long run.

In view of these data and the cruel hardship alcoholism can work on veterans and their family members, it is imperative, in the Committee's view, that VA programs be expanded to face up to the virtually epidemic proportions of alcoholism and alcohol-related problems among veterans and that

these programs comprehensively treat the symptoms of alcoholism and aim to rehabilitate veterans suffering from this disability.

The Committee recognizes that a major problem in providing treatment and rehabilitation for veterans suffering from alcohol dependence or abuse is the difficulty in recruiting physicians and other professionals to staff such treatment units and to work in the field of alcoholism generally. Thus, the Committee urges the VA to study the feasibility of establishing a Center for the Study of Alcoholism and Alcohol Rehabilitation, which could serve a double purpose—improving methods to treat this tragic disability and attracting first-rate clinicians (psychiatrists, psychologists, and other specialists) into the VA system to treat patients with alcoholism. Such a center could appropriately include drug abuse and dependence research programs as well, because many veterans presenting drug disability problems also suffer from alcoholism. The Chairman recommended establishment of such a center in a June 6, 1977, letter to the Chief Medical Director.

Treatment and Rehabilitation Programs

The Committee bill calls for the establishment of specialized medical programs providing inpatient and outpatient treatment programs and rehabilitative services on a nationwide basis, and stresses the desirability of utilizing satellite facilities, halfway houses, encounter-style therapeutic communities, and counselors who have recovered from either an alcohol or drug disability, to the extent practicable, both in the treatment phase and through the rehabilitation period to insure the restoration of the patient to society as a productive, self-sufficient citizen.

The Committee urges the VA to implement a variety of treatment modalities in treating patients with drug or alcohol disabilities. In testimony before the Committee, VA representatives contended that it is not practical for the agency to have real multiple alternatives at each hospital. When adequate alternatives are lacking, however, the patient's opportunity to participate in, for example, a drug-free program, rather than a program relying on chemotherapy, is blocked. The Committee bill, therefore, requires that, at a minimum, the VA offer each veteran a drug-free treatment modality unless such a treatment modality is medically contraindicated.

In addition, the Committee bill authorizes the VA to contract with other government or private halfway-house facilities to assure that benefits and progress which may have been achieved during the treatment phase of a program can be retained under a partially supervised living environment.

Dr. Morris Chafetz, President of the Health Education Foundation, and former director of the National Institute on Alcohol Abuse and Alcoholism, pointed out at the June 1977 hearings that this type of facility could be invaluable in the early treatment phase of a program as well. Dr. Chafetz testified:

"Although the importance of inpatient facilities cannot be overemphasized, alternative treatment methods, such as those available in halfway houses, for example, must also be available for those who neither require nor desire hospital care. It is an essential supplement to the existing program that will allow followup and continuity of care."

Dr. Henry O. Tavitian, testifying for the National Association of VA Physicians, stated:

"The need for rehabilitative programs (Drug Dependent Treatment Programs) with strong emphasis on comprehensive and wide range of physical health and psychosocial services enabling the veteran to give up his ways of dealing with life situations in which addictive behavior is a major component and engage in healthier and more constructive patterns of behavior cannot be overstated."

The Committee is aware that in some cases, the problems of a veteran who suffers from alcoholism or drug addiction are aggravated by the existence of a close family member who suffers from the same addiction. In such cases, successful treatment programs can often be achieved only if treatment is provided to both the veteran and the family member in one program. Since treatment of a non-veteran family member in a VA facility raises numerous difficult questions, the Committee bill would add a new authority to title 38 providing for the VA, when essential to the successful treatment and rehabilitation of a veteran, to furnish treatment and rehabilitative services to the veteran, at VA expense (limited to reasonable costs determined by DM&S), in a community facility approved by DM&S where the veterans' family member is enrolled and where both can be treated together. In such cases, the VA would not cover any of the costs of treatment of the member of the veterans' family.

Employment Opportunities for Rehabilitated Veterans

Success in treatment and rehabilitation of an addicted veteran can be heightened if the veteran is in the work force and involved in a satisfying and fulfilling job. In order to assist recovered veteran addicts in finding productive employment, the Committee bill would direct the VA to carry out a program with other Federal agencies to promote the Federal employment of recovered addicts (drug as well as alcohol), and to cooperate with and assist the Secretary of Labor in placing these veterans with private employers.

Alcohol and Drug Treatment Program Eligibility

The Committee bill would broaden eligibility for alcohol or drug abuse treatment and rehabilitation services to include veterans who, because of the nature of their active duty discharges, would not otherwise qualify for hospital care or medical services under title 38. Under section 101(2) of title 38, the VA does not have general authority to treat an alcohol or drug dependent veteran—or any veteran for that matter—with less than an Honorable or General Discharge. (A veteran with such a "bad" discharge (not the result of a general court-martial or for certain reasons specified in section 3103 of title 38) can be made eligible for chapter 17 health care services if he applies for and receives an adjudication that his discharge was under "conditions other than dishonorable", but the adjudication process takes many months and seldom results in a finding favorable to the veteran.)

The result of this situation has been that many thousands of veterans who became drug addicted while in the service, primarily in Southeast Asia, or encountered alcohol problems during their active duty, have been denied the treatment and rehabilitative services they need to cope with their tragic disabilities. Under the Committee bill, the Administrator would have discretionary authority to provide those critical services to veterans with administrative discharges under other than honorable conditions, but not within the bar-to-benefits proscription of section 3103.

For veterans suffering from alcohol- or drug-related disabilities, the Committee bill would also set up special treatment and rehabilitation programs to seek out and counsel addicted veterans and provide them with help in obtaining review and correction by the military of discharges under other than honorable conditions.

The Committee bill would also require the VA to provide treatment and rehabilitative services for any eligible veteran who has been charged with or convicted of a criminal offense, but who is not confined and is not required to participate in the program by a court of competent jurisdiction, State or Federal. Also, such treatment and services are authorized in the case of a veteran who is under court jurisdiction as a result of a charge or conviction for a criminal offense and who is required to participate in a treatment program by the court, but the services may be provided only under conditions which will insure that the voluntary nature of the program with regard to other participating veterans would not be impaired.

In addition, the Committee bill would provide procedures for the treatment of active duty service personnel suffering from drug dependence in VA health care facilities if they voluntarily, in writing, request such treatment. This transfer from the Armed Forces to a VA facility would be limited to the last 30 days of a tour of duty. The purpose of requiring a written voluntary request is to preserve the fundamental voluntary basis of VA drug treatment programs. If a headstart can be achieved on the voluntary treatment of service personnel in a VA program, that should be and would be permissible under the Committee bill.

These flexible eligibility provisions for VA treatment are necessary in dealing with disabilities such as alcohol and drug dependence and abuse where the disabilities themselves can alter behavior to the extent that treatment and rehabilitation becomes unavailable, and the veteran is caught in a web of addiction or abuse, erratic and antisocial behavior, and illness.

Cost

The Congressional Budget Office (CBO) estimates that 93 additional substance abuse programs will be needed to provide the expanded programs authorized by this new section. This number of units would permit the establishment of one unit in each of the VA's 172 hospitals and eight independent outpatient clinics. These programs would be phased in over a period of 5 years, with 15 programs starting in each of the first 4 years and 33 programs starting in fiscal year 1982.

CBO also estimates, very conservatively in the Committee's view, that 8 percent of all admissions for alcohol disabilities could better profit from halfway-house placement, and that, if this percentage of all alcohol-related admissions could be placed in halfway houses instead of being admitted to hospitals, potential savings could be realized.

The additional costs for establishment of these alcohol and drug programs would be highest in the first year and in fiscal year 1982 when a projected increment of 33 new programs would be initiated. In fiscal year 1980, the median point, the costs for alcohol and drug programs are estimated at $3.8 million; the halfway-house costs are estimated at $13.4 million, and the savings realized by transferring and diverting patients from VA hospitals to halfway houses are estimated at $20.7 million—for a net savings in costs of $3.5 million in that year. During the first 5 years of these programs, CBO estimates a net savings in cost of $3.2 million.

Eligibility amendments

Benefits Eligibility for "Early Re-Ups"

Under current law, the term "veteran" is defined in section 101(2) of title 38, United States Code for purposes of general eligibility for veterans' benefits, as "a person who served in the active military, naval, or air service, and who was discharged or released therefrom under conditions other than dishonorable". The words "discharged or released" have long been interpreted by the VA as including only "unconditional"

discharges or releases, that is, only discharges or releases which qualify the individual for unconditional separation from active-duty service. Thus, a discharge issued for the sole purpose of changing the status of a person who continues to be obligated to remain on active duty (for example, when a discharge is issued to an enlisted person in order for him or her to accept a commission), or accomplishing an extension of active-duty service (for example, when the individual is given a discharge on condition that he or she extend his or her service through immediate enlistment or reenlistment) is considered a "conditional discharge" which does not satisfy the requirements of section 101(2).

The Committee agrees that a discharge or release granted under such circumstances before the individual has completed the period of active-duty service for which he or she became obligated at the time of induction or enlistment should not be considered a "discharge" or "release" for purposes of benefits eligibility. However, the Committee has recommended that legislation be enacted to correct the inequity which occurs when the individual does satisfactorily complete the originally intended period of service but does not receive a discharge or release at that time because he or she previously extended his or her service.

The need for such legislation can be illustrated by comparing the situations of three individuals, A, B, and C, all enlisting on the same day for the same 3-year period of active-duty service:

A

A, after 2 years of service on a 3-year enlistment, agrees to a 4-year extension. Because A's original enlistment has not yet expired, A is issued a "conditional" discharge at that time—a discharge conditioned on immediate reentry into active-duty service for a period of 4 years. Such a discharge is not recognized by the VA for purposes of benefits eligibility.

A satisfactorily completes 3 years of service but does not receive an Honorable Discharge at that time because he has 3 years of extended service remaining. During the fifth year of service, A is involved in various incidents resulting in a discharge under conditions other than honorable. Despite having completed satisfactorily the 3 years of service for which A originally enlisted, A would not have a discharge making him eligible for benefits.

B

B completes satisfactorily the original 3-year enlistment, receives an Honorable Discharge, and immediately reenlists for a second 3-year tour of active-duty service. Like A, B is involved in various incidents during the fifth year of service and is discharged under conditions other than honorable. Unlike A, however, B has an unconditional discharge—one received after 3 years of service—carrying with it eligibility for veterans' benefits.

C

C completes satisfactorily the original 3-year enlistment and receives an Honorable Discharge. C never reenters active-duty service and is eligible for veterans' benefits.

These hypothetical cases lead inescapably to the conclusion that a serviceperson may be prejudiced in terms of eligibility for veterans' benefits by agreeing to extended service before the expiration of his or her first period of service. Only A—who completed the initial 3-year commitment honorably under circumstances identical to B and C—is not entitled to benefits. Ironically, such extensions generally result from encouragement by the service for the purpose of obtaining assurance of its ability to meet future personnel requirements.

To remedy this situation, section 304(a) of the Committee bill amends the definition of the term "discharge or release" in section 101(18) of title 38 by expanding it to include, under these circumstances, the satisfactory completion of a period of service equal in length of time to the period of active-duty service for which the individual originally enlisted or was inducted.

Limitation on Certain Dental Care Entitlement

Section 612(b)(2) of title 38 generally requires that a veteran apply to the VA within 1 year of the date of discharge or release in order to receive outpatient dental care (and related dental appliances) for a service-connected dental condition or disability that is not compensable in degree. When the individual leaves active-duty service permanently upon receipt of a discharge or release, this 1-year limitation operates fairly and requires the veteran to seek early treatment of the service-connected, but noncompensable, condition or disability.

If, however, the individual reenters active-duty service before the 1-year limitation has expired, the time for making application may expire during such service. Thus, immediately following the subsequent period of service and return to civilian life, if the veteran requires care for the condition or disability incurred or aggravated during the prior period of service, the veteran would be, according to the VA's interpretation, ineligible for such care from the VA.

In the Committee's view, it is unreasonable to expect the individual to apply to the VA for care or treatment while on active duty. Persons on active duty naturally expect the military department concerned to provide for their dental and medical needs and would, understandably and justifiably, be surprised to learn that their entitlement to any VA care may expire during such service. In fact, it is conceivable that the individual might actually receive some treatment for his or her dental condition or disability during the subsequent enlistment, and, assuming the condition was not aggravated during that enlistment, still be ineligible for VA treatment of the condition following discharge or release from that period of service.

The Committee views these results as clearly inequitable and anomalous. Section 304(b) of the Committee bill, therefore, amends section 612(b)(2) to reinstate, after subsequent active-duty service in the case of a person with less than a 1-year break in service, the 1-year post-service period within which an application for such dental care must be made to the VA.

COST ESTIMATE

In accordance with section 252(a) of the Legislative Reorganization Act of 1970 (Public Law 91–150, 91st Congress), the Committee, based on information supplied by the Congressional Budget Office, estimates that the 5-year cost resulting from the enactment of the Committee bill would be $26.97 million in fiscal year 1978; $29.94 million in fiscal year 1979; $20.10 million in fiscal year 1980; $20.35 million in fiscal year 1981; and $24.86 million in fiscal year 1982. A detailed breakdown of these costs, as estimated by CBO, over the 5-year period follows:

CONGRESSIONAL BUDGET OFFICE—COST ESTIMATE

1. Bill number: H.R. 5027.

2. Bill title: Veterans Health Care Amendments Act of 1977.

3. Purpose of the bill: To amend title 38 of the United States Code to clarify the requirement that medical services be provided by the Veterans' Administration in certain cases.

4. Cost estimate: (dollars in millions):

Section	1978	1979	1980	1981	1982
101: Services outside VA facilities	(1)	(1)	(1)	(1)	(1)
201(a): Extension of physician and dentist special pay	3.96	7.93	7.06	6.29	2.96
201(b)(3): Chief of staff special pay	(1)	(1)	(1)	(1)	(1)
201(b)(5): Physician and dentist new pay agreements	.09	.17	.15	.14	.07
201(d)(1): Special language programs	(1)	(1)	(1)	(1)	(1)
202: Clinical podiatrist and optometrist pay schedule	.71	.42	.45	.48	.51
301(a):					
Readjustment counseling	12.39	8.36	1.75	1.85	1.96
Outpatient mental health	2.57	2.73	2.89	3.06	3.25
302(a):					
Prevention program	2.85	5.53	7.20	8.82	11.96
Pilot program		7.42	7.83	8.27	8.74
303: Drug and alcohol treatment	+4.40	+.90	−3.50	−4.60	−.40
304(a): Discharge or release changes	(1)	(1)	(1)	(1)	(1)
304(b): Dental services	(1)	(1)	(1)	(1)	(1)
Total	26.97	33.46	23.83	24.31	29.05

1 No real cost impact.

5. Basis for estimate:

Section 101 amends section 601(4)(c) of title 38 to permit the provision of outpatient fee-basis care outside of VA facilities for the non-service-connected disabilities of veterans who under section 612(g) of title 38 are eligible for housebound or aid-and-attendance benefits. The bill therefore has the effect of repealing amendments to title 38 contained in sections 202(b)(2)(A) and 202(f)(3) of Public Law 94–581, the Veterans Omnibus Health Care Act of 1976. In preparing the cost estimate on this bill last year, no net cost or savings were attributed to these two provisions. Thus, their repeal would not reflect any additional costs.

Section 201(a) extends the VA's physician and dentist special pay authority under section 4118 of title 38, for 1 year, through fiscal year 1978.

It is assumed, based on previous experience of Public Law 94–123 that the average annual special pay would be $7,244 for full-time physicians, $3,262 for part-time physicians and $3,200 for full-time dentists; that approximately 96 percent of those eligible will enter the program; and that, of these, 95 percent will sign a 4-year contract. Projected costs for fiscal year 1978 will be lower than in succeeding years since approximately 85 percent of those hired will work less than a full year (50 percent will be hired in the final quarter). In addition, projected costs for 1982 reflect the drop-out of physicians and dentists once their 4-year contracts have expired. A 6 percent annual inflation rate is used in determining the yearly costs.

[In millions of dollars]

Fiscal year costs:	
1978	3.96
1979	7.93
1980	7.06
1981	6.29
1982	2.96

Section 201(b)(3) authorizes payment of the full amount of special pay (up to $13,500) to a full-time VA Hospital chief of staff.

Presently, the VA system has 152 full-time and 11 part-time chiefs of staff each receiving an average yearly special pay of $10,272 and $6,512, respectively. Because only a small number would be affected by this provision, the VA estimates the cost impact to be minimal.

Section 201(b)(5) permits any full-time physician or dentist to enter into new special pay agreements for up to 4 years. This provision excludes those physicians and dentists who fall within the categories specified by subsection (g) of section 4118, title 38 who can enter into new agreements at higher rates of pay after completion of 1 year of service under a prior agreement.

Assumptions:

(1) Under Public Law 94–581, all physicians who signed 4-year agreements in fiscal year 1976 could resign without penalties; however, a small group of physicians and no dentists signed for only 2 years, initially.

(2) Of the 124 full-time and 50 part-time physicians who signed a 2-year agreement, 20 percent (or 25 full-time and 10 part-time physicians) will still be employed in fiscal year 1978 and will opt for a new 4-year agreement at the present average special pay amount of $7,244 and $3,262, respectively.

(3) Projected costs for fiscal year 1978 will be lower than in succeeding years since approximately 85 percent of those hired will work less than a full year (50 percent will be hired in the final quarter). Projected costs for 1982 reflect the drop-out of physicians and dentists once their 4-year contracts have expired.

(4) The VA assumes a 10 percent physician loss rate each year with all losses replaced by new hires. A 6 percent annual rate of inflation is used in estimating the costs of this section.

[In millions of dollars]

Costs:	
1978	0.090
1979	0.172
1980	0.150
1981	0.139
1982	0.069

Section 201(d)(1) provides for special language training programs to insure that all VA employees involved in direct patient care in the Department of Medicine and Surgery be proficient in English or another language, if appropriate Although baseline data is not available at present and the VA is currently studying the cost impact of this provision, CBO assumes no significant costs associated with this section.

Section 202 amends the clinical podiatrist and optometrist pay schedule in section 4107 of title 38 to provide employees, in this schedule, in the VA Department of Medicine and Surgery with the benefits of the cost-of-living increase effected by Executive Order 11941 on October 1, 1976. This section provides for the application of the title 38 pay schedule added by the 1976 Veterans Omnibus Health Care Act to replace the present GS pay ratings for optometrists and podiatrists in the VA system. The provisions of this section are retroactive to October 21, 1976.

In fiscal year 1977 there were a total of 19 optometrists (9 full-time and 10 part-time) and 52 podiatrists (20 full-time and 32 part-time) in the VA system.

The cost estimate for this section was based upon the midpoint differences between each GS range and its corresponding title 38 range. Using a factor of one for full-time and one-half for part-time employees, each midpoint difference at each grade level was then multiplied by the number of full-time and part-time optometrists and podiatrists currently employed by the VA at GS levels 9 to 13 to get the sum total of salary increases for fiscal year 1978. This total was doubled to account for the retroactive increases from fiscal year 1976 to fiscal year 1977. An additional 6 percent inflation rate was used in estimating salaries for fiscal years 1979–1982.

[In millions of dollars]

Fiscal year—salary increases:	
1978	0.71
1979	0.42
1980	0.45
1981	0.48
1982	0 51

Section 301(a) establishes eligibility for readjustment professional and paraprofessional counseling for any veteran who served after August 4, 1964 or prior in the Indochina conflict. Also, under section 301(a), veterans who are seen as a result of a readjustment counseling visit and are deemed in need of outpatient mental health services, shall be eligible for those services.

The following assumptions are used to estimate the costs of section 301(a):

(1) Of the estimated 354,400 veterans who would apply for readjustment counseling, 30 percent (106,320) would be provided with outpatient mental health services also under section 301(a) and would thus only receive one initial counseling visit. The remainder (240,080) would receive an average of four visits.

(2) Of the 354,400 veterans who would presently be eligible, it is assumed that 10 percent would take advantage of this service in 1978, 60 percent in 1979, and 30 percent in 1980.

(3) Cost/visit based upon the utilization, to as great an extent as feasible, of paraprofessional personnel, would average $12 in 1978.

(4) VA assumes that some veterans have no family and others would have several members who would avail themselves of readjustment counseling; therefore, estimates for family services are based on 0.9 family members per veteran receiving one additional visit.

(5) 1979–1982 costs are based upon the VA assumption of 5 percent of the 500,000 veterans who would become eligible each year would take advantage of the counseling services and that 20 percent would be provided mental health services under this section. The lower percentage is based upon an assumed lower percentage of pathology given the fact that the presently eligible population consists of veterans of the Indochina conflict. Also, a 6 percent annual inflation rate is used for the costs per visit and travel.

The costs associated with section 301(a) are:

[Dollar amounts in millions]

	1978	1979	1980	1981	1982
Beneficiaries receiving 4 visits	140,848	94,424	20,000	20,000	20,000
Beneficiaries receiving 1 visit	63,792	36,896	5,000	4,000	5,000
Beneficiary visits	627,184	414,592	85,000	85,000	85,000
Family visits	126,763	84,982	18,000	18,000	18,000
Total, visits	753,947	499,574	103,000	103,000	103,000
Service costs	$9.59	$6.36	$1.31	$1.39	$1.47
Travel costs	2.8	2.0	.44	.46	.49
Total, costs	12.39	8.36	1.75	1.85	1.96

Section 301 would also increase the overall outpatient load for mental health services as a result of those veterans who were referred from the readjustment counseling program. In order to ensure entitlement to all eligible veterans, there would have to be an increase in staff in those sites where these mental health services are not presently available. The VA estimates that there are presently 30 such facilities where professional personnel would have to be added. Assuming two full-time equivalent professional employees per site at a cost of $37,500/FTEE (VA estimate) and a 5 percent annual salary increase, the increased costs associated with this provision would be (travel costs assume an increase of 45,000 visits—$2.39 million÷$53/visit—and a $3.78/visit reimbursement for 1978 inflated by 6 percent/year in 1979–1982).

[In millions of dollars]

	1978	1979	1980	1981	1982
Costs	2.39	2.54	2.69	2.85	3.03
Travel costs	.18	.19	.20	.21	.22
Total	2.57	2.73	2.89	3.06	3.25

Section 302(a) establishes a preventive health care program for veterans by:

(1) Authorizing the Administrator to offer, at his discretion, a set of preventive services for service-connected disabled veterans; and

(2) Establishing a pilot program on a limited basis to determine the "cost effectiveness and medical advantages" of offering comprehensive health care services to a selected study population of veterans.

It is assumed that all 2.2 million service-connected disabled veterans will be eligible for the first provision and that three specific services will be offered (e.g., electrocardiograms and hypertension screening, tonometry, and a proctoscopic examination). Further, over the course of the 5 years, a total of 25 percent of the eligible veterans will take advantage of the program (at a rate, according to the VA, of 30 percent of the 25 percent the first year, 55 percent in 1979, 70 percent in 1980, 80 percent in 1981 and 100 percent in 1982). A total cost of $8.25 is assumed for these three tests as is a 1 percent increase in hospitalization as a result of identifying otherwise undetected morbidity based on the tests. Also, it is assumed that 5 percent of those tested will require follow-up, including two additional visits at a 1978 cost of $53/visit. Further, for those who need hospitalization, it is assumed a $30/day marginal cost and an average length of stay of 10 days. Increased hospital costs are calculated, as in section 104, using only the variable cost of in-patient care which is 30 percent of the total rate. Also, a 6 percent annual increase in the cost of services is assumed.

The costs for these preventive services are projected as:

[Dollar amounts in millions]

	1978	1979	1980	1981	1982
Beneficiaries	220,000	302,500	385,000	440,000	550,000
Cost of services	$1.44	$2.81	$3.78	$4.62	$6.07
Induced hospitalization	.53	1.02	1.29	1.66	2.21
Cost of followup	.88	1.70	2.13	2.54	3.68
Total	2.85	5.53	7.20	8.82	11.96

Section 302(a) calls for the creation of any HMO-type pilot program for a population of veterans with service-connected disabilities to compare, over time, the health status of this group with that of a similarly constituted control group. This section specifies that the size of the population served be 10,000 (with a control of 10,000) and a cost per individual of $650/year (inflated by 6 percent/year). Lastly, a $0.53 million cost/year is added for the generation, maintenance and analysis of the data to be used in the study.

[In millions of dollars]

	1978	1979	1980	1981	1982
HMO costs		6.89	7.30	7.74	8.21
Study costs		.53	.53	.53	.53
Total, costs		7.42	7.83	8.27	8.74

Section 303 adds to chapter 17 new section 620A. This section would require the VA to provide a broader range of treatment modalities to veterans addicted to either alcohol or drugs. It would also provide the VA with discretionary authority to provide alcohol and drug treatment to former service personnel with administrative discharges under other than honorable conditions who abused alcohol or drugs during active service.

This section stresses the use in treatment programs of counselors who have recovered from such disabilities, and of halfway houses and alternative treatment modalities, in a comprehensive program ranging from detoxification to recovery. In addition, the VA is authorized to provide halfway-house facilities directly on by contract with other government or approved private facilities.

For veterans suffering from drug related disabilities, this section would set up special treatment and rehabilitation programs offering individual counseling, referral services, and crisis intervention. The VA would also be required to offer alternative modalities of treatment based upon the individual needs of the veteran.

Assumptions:

(1) VA now operates 73 alcoholic treatment and 53 drug treatment programs. VA estimates the need for 93 additional substance abuse programs to meet the increased demand created by this section, thereby allowing for one in each of VA's 172 hospitals and eight independent outpatient clinics.

(2) Estimates of program establishment costs are based upon 15 programs starting in each of the first 4 years and 33 programs starting in fiscal year 1982. (Total yearly outlays include FTEE, recurring and nonrecurring costs.)

(3) Section 303 gives VA the authority to utilize fee service contracts for substance abuse veterans in halfway houses. VA estimates 8 percent of the 77,000 admissions (6,200) into VA drug and alcohol abuse programs in fiscal year 1976 could have benefited from halfway house placement. Assuming an average length of stay of 120 days per beneficiary at a daily cost of $17 (VA estimate), total costs were estimated.

(4) The VA also has indicated that 10 percent of all VA hospital admissions are alcohol abuse related. Assuming 1.2 million admissions in fiscal year 1978, 120,000 would be alcohol abuse related and further assuming that 8 percent of this number, or 9,600 veterans, could benefit from halfway house instead of hospital placement, a potential savings was calculated.

(5) To estimate this savings, an average hospital length of stay per veteran with alcohol abuse problems was assumed to be 120 days at a variable cost of $33/day. Therefore, hospital costs—9,600 veterans × $33.00/day × 120 days = $38.0 million and halfway house costs—9,600 veterans × $17/day × 120 days = $19.6 million. This would lead to a net savings of $18.4 million in fiscal year 1978 if these individuals were transferred out of the hospital into a halfway house. Estimates are inflated by an annual increase in costs of 6 percent, and it is assumed that only a half-year savings would accrue in fiscal year 1978.

The costs associated with section 303 are:

	1978	1979	1980	1981	1982
Additional alcohol and drug program costs	4.1	3.7	3.8	3.2	7.8
Halfway house costs	9.5	16.7	13.4	14.2	15.1
Savings from transfer from VA hospitals to halfway houses	−9.2	−19.5	−20.7	−22.0	−23.3
Net costs	+4.4	+.9	−3.5	−4.6	−.4

Subsection 304(a) amends paragraph (18) of section 101 of title 38, the definition of "discharge or release." VA estimates of the magnitude of this section are not available; however, it is assumed that the numbers of eligible veterans who might seek benefits and services under this provision are small and this section, therefore, would have minimal cost impact

Subsection 304(b) amends section 612(b) of title 38 extending eligibility for the treatment of service-connected dental conditions. This section would affect only a small number of individuals and would, thus, have no significant cost impact.

6. Estimate Comparison: None.

7. Previous CBO estimate: None.

8. Estimate prepared by: Jane Coury (225–7758).

9. Estimate approved by:

JAMES L. BLUM,
Assistant Director for Budget Analysis.

* * * * *

SECTION-BY-SECTION ANALYSIS OF H.R. 5027 AS REPORTED

Section 1—Provides that this Act may be cited as the "Veterans Health Care Amendments Act of 1977".

TITLE I—CONTRACT CARE AMENDMENTS

Section 101—Amends clause (C) of paragraph (4) of present section 601 of title 38, United States Code, which defines "Veterans' Administration facilities" to include, under the circumstances described in such clause (C), private facilities and, thus, in conjunction with certain other provisions of such chapter 17, provides authority for the furnishing of contract hospital care and medical services (so-called "fee" care or "fee-basic" care) under those same circumstances.

Clause (1) of section 101 amends such clause (C) to expand the definition of "Veterans' Administration facilities" to include private facilities for which the Administrator contracts—when the VA's own facilities or other Government facilities are not capable of furnishing economical care because of geographic inaccessibility or of furnishing the care or services required—to provide medical services for the treatment of a veteran eligible for regular aid and attendance or housebound benefits where the Administrator has determined, on the basis of a physical examination (which could be a previous, but recent, examination) that the veteran's medical condition precludes appropriate treatment in the VA's own facilities or other available Government facilities. The new definition, thus, changes existing law by authorizing the VA to provide outpatient "fee-basis" care through private physicians or facilities when the ordinary conditions for the provision of contract outpatient care for service-connected disabilities are met and it is determined that private care is required by the veteran's medical condition.

Clause (2) of section 101 amends the same clause (C) by deleting the existing subclause (v) and inserting a new subclause (v) in lieu thereof and adding a new subclause (vi).

New Subclause (v): Expands the VA's contract authority in Alaska, Hawaii, and Puerto Rico, and the territories and possessions of the United States to include medical services which will obviate the need for hospital admissions of veterans with non-service-connected disabilities. Current subclause (v), in effect, authorizes the furnishing of contract hospital care for non-service-connected disabilities of veterans in Alaska, Hawaii, the Commonwealth of Puerto Rico, and the territories and possessions of the United States, and conditions the provision of such care in Alaska and Hawaii on satisfaction of the requirement that the annually determined average hospital patient load per thousand veteran population hospitalized at VA expense in Alaska or Hawaii not exceed the average level of such care provided by the VA within the 48 contiguous States. New subclause (v) also changes the conditions under which both hospital care and medical services for non-service-connected disabilities may be provided. The new conditions are that the annually determined hospital patient load and incidence of the provision of medical services to veterans hospitalized or treated at VA expense in each such noncontiguous State or other geographic area (except in Puerto Rico) must be consistent with the level of such care and services, respectively, furnished by the VA within the 48 contiguous States.

New subclause (vi): Expands the VA's contract authority to include the furnishing of diagnostic services through private facilities where necessary in order for the VA either to determine a veteran's eligibility for treatment of a non-service-connected disability at an independent VA outpatient clinic on the grounds that the treatment would obviate the need for hospital admission, or to determine the appropriate course of treatment in such cases.

Clause (3) of section 101 amends the same clause (C) by adding at the end thereof a new sentence requiring periodic reviews of individual contract treatment cases for the purpose of determining the necessity of continuing the contractual arrangement.

Section 102—Subsection (a) of section 102 provides authority for the VA to continue, for a 1-year period following enactment, to contract for the provision of any hospital care and medical services which it had authorized during the period October 20, 1976 through May 15, 1977. In addition to this broad authority to continue contractual arrangements in all cases, this subsection provides authority for further continuing such contract services for as long as the VA's Chief Medical Director determines, on a case-by-case basis, that a longer continuous period of contract care is necessary to complete the course of treatment for a particular disability, and that the continuation of contract treatment is medically preferable to treatment in the VA's own facilities or other available Government facilities. Also, this section requires that, if in a case of continued contract treatment beyond the first year following enactment it appears that authority for contract treatment exists under title 38, the title 38 authority for the contractual arrangement must be used instead of the extraordinary authority provided in this subsection.

Subsection (b) of section 102 requires the VA to insure that each veteran for whom contract services are continued under subsection (a) is individually informed of his or her rights to care under this section and under title 38. This subsection also requires the VA, before it discontinues contract services under subsection (a), to advise the veteran-patient—through personal counseling whenever possible—about the circumstances under which contract services may be authorized under title 38; and requires the VA, to the maximum extent practicable within 9 months after enactment, to make and communicate to the veteran-patient a determination of eligibility for continued contract treatment under subsection (a) beyond the 1-year period and under title 38.

Subsection (c) of section 102 requires the VA to provide the appropriate congressional committees with annual reports (on April 1 of each year beginning in 1978) on its implementation of this title, including detailed breakdowns of the numbers of veterans provided contract care and the cost and duration of such care according to the specific authority for the furnishing of such care under title 38 and section 102 of the Committee bill.

Section 103—Provides that this title, including both the amendments made in title 38 and the other provisions of this title shall be effective retroactive to October 31, 1976.

Title I—Cost: Enactment of the provisions in this title of the Committee bill will not result in any additional costs in fiscal year 1978 or later years.

TITLE II—PHYSICIAN AND DENTIST SPECIAL-PAY AND OTHER PAY AMENDMENTS

Section 201—Amends section 6(a)(2) of the Veterans' Administration Physician and Dentist Pay Comparability Act of 1975 to postpone the expiration date to September 30, 1978, and makes changes in section 4118 of title 38, United States Code, with respect to the special-pay program for physicians and dentists.

Subsection (a) of section 201 extends until September 30, 1978, the special-pay program (that is, the authority to enter into new special-pay agreements), which, under section 6(a)(2) of Public Law 94–123, the Veterans' Administration Physician and Dentist Pay Comparability Act of 1975, as amended by section 112(a) of Public Law 94–581, the Veterans Omnibus Health Care Act of 1976, is due to expire on September 30, 1977.

Subsection (b) of section 201 amends section 4118 (relating to the special-pay program for physicians and dentists) of title 38.

Clause (1) of subsection (b) amends subsection (a)(1) of section 4118 by striking out the word "he" and inserting in lieu thereof the words "the Administrator". Public Law 94–581 attempted to eliminate all references to gender in title 38, United States Code. This amendment corrects an omission in that law.

Clause (2) of subsection (b) adds a new sentence to subsection (a)(3) of section 4118 to require the Chief Medical Director to make redeterminations annually as to whether significant recruitment and retention problems exist as to any category of positions applicable to both physicians and dentists as to which it has previously been determined that there is no such problem. Physicians and dentists serving in any position in a category as to which it has been determined that no significant and retention problems exist are not eligible to enter into special-pay agreements.

Clause (3) of subsection (b) adds a new paragraph (4) to subsection (b) of section 4118 to authorize the Administrator to enter into special-pay agreements with physicians employed full time as VA hospital Chiefs of Staff providing for the payment of up to the maximum amount of special pay on condition that such physicians be prohibited by applicable regulations from receiving remuneration from an affiliated medical school or other health personnel training institution (as defined in section 4108(b) of title 38).

Clause (4) of subsection (b) modifies subsection (d)(1) of section 4118 to conform to new subsection (g) of section 4118 added by clause (6) of this subsection.

Clause (5) of subsection (b) amends subsection (e)(1) of section 4118 to provide that, upon completion by a physician or dentist of the number of years of service specified in an agreement authorized by section 4118, such individual may enter into subsequent agreements for up to 4 additional years of service per agreement.

Clause (6) of subsection (b) adds a new subsection (g) to section 4118 to authorize the Chief Medical Director, in accordance with regulations prescribed under section 4118(a)(1), to determine categories of positions as to which there are sufficient recruitment and retention problems of full-time employees to warrant making an exception for them from the reduction in special pay required by subsection (d)(1) of section 4118 (equivalent to the amount of the October 1975 cost-of-living increase), if the employee agrees to serve on a full-time basis for a period of 4 years. Any physician or dentist in such category already employed full time would be entitled, upon completion of 1 year of service under a prior agreement, to enter into a new agreement for a period of 4 years of full-time service under which he or she would realize the benefit of the exception from the reduction in special pay. Any such full-time-service agreement must provide for the refund of the additional amount so received should the individual fail, voluntarily or because of misconduct, to complete the 4 years of service agreed upon, unless the Chief Medical Director determines that such failure was for reasons beyond the individual's control.

Subsection (c) of section 201 requires the Chief Medical Director, prior to the execution of any new agreements after October 1, 1977, to reevaluate, in view of the executive level pay raise effective in the VA on February 27, 1977, the need for special-pay agreements in order to recruit and retain highly qualified physicians or dentists in each category of positions in the Department of Medicine and Surgery and to report to Congress not later than October 1, 1977, on the results of such reevaluation. Subsection (c) also provides that the Administrator of Veterans' Affairs, upon the recommendation of the Chief Medical Director based upon such reevaluation, may, in accordance with the notice and hearing provisions of the Administrative Procedure Act, promulgate a rule reducing the amount of primary special pay for any category of positions to the extent the Administrator finds primary special pay is not necessary to recruit and retain physicians and dentists in that category.

Subsection (d) of section 201 requires the VA to implement procedures aimed at overcoming language and cultural barriers between VA health care staff and veteran-patients.

Paragraph (1) of subsection (d) provides that, not later than 180 days after enactment of the Committee bill, the Administrator, upon the recommendation of the Chief Medical Director, shall establish and implement procedures to insure that all VA health care personnel having direct patient-care responsibilities achieve, not later than 1 year after their employment, or 1 year after procedures are established pursuant to this paragraph, whichever is later, such basic proficiency in spoken and written English as will produce effective communication with patients and other health care personnel.

Paragraph (2) of subsection (d) provides that, where a VA facility serves a substantial number of veterans with limited English-speaking ability, the Administrator, upon the recommendation of the Chief Medical Director, shall establish and implement procedures to insure the identification of sufficient numbers of individuals on the facility staff who are fluent in both the langauge of such veterans and in English whose responsibilities shall include providing guidance to veterans and staff with respect to cultural sensitivities and bridging linguistic and cultural differences.

Paragraph (3) of subsection (d) requires the Administrator, not later than 90 days after enactment, to report to the House and Senate Committees on Veterans' Affairs, the steps taken and plans formulated to comply with the provisions of this subsection.

Section 202—Revises the section 4103 schedule in section 4107 of title 36 and the Clinical Podiatrist and Optometrist Schedule in section 4107 to reflect the increase in statutory rates of pay made by Executive Order 11941, effective October 1, 1976, and to provide for retroactive application of such rates to October 21, 1976.

Subsection (a) of section 202: (1) Revises the Director of Podiatric Service Schedule to provide a salary range of $39,629 minimum to $50,197 maximum; (2) revises the Clinical Podiatrist and Optometrist Schedule to conform to the appropriate levels in the Physician and Dentist Schedule; and (3) provides that such minimum and maximum pay ranges shall be effective retroactive to October 21, 1976, and directs the Administrator to establish intermediate pay rates between the minimum and maximum pay ranges retroactively and to apply such pay rates as appropriate retroactively.

Subsection (b) of section 202 establishes certain procedures under which podiatrists and optometrists shall be converted from employment under title 5, United States Code, to employment under title 38 and provides for retroactive application of the revised salary schedules.

Clause (A) of paragraph (1) of subsection (b) prohibits the conversion of any podiatrist or optometrist from employment under title 5 to full-time or part-time employment under title 38 until the day after the rates of statutory pay systems are next adjusted to reflect the cost-of-living increase, or November 1, 1977, whichever is earlier, and provides that any conversion after such date shall be effective retroactive to October 21, 1976, or the most recent date of appointment in the Department of Medicine and Surgery of the employee concerned.

Clause (B) of paragraph (1) of subsection (b) provides that, when the statutory pay rates are next adjusted, the new rates established by subsection (a)(2) of this section of the Committee bill shall be increased by the same percentages as the Physician and Dentist Schedule.

Paragraph (2) of subsection (b) provides that the effective date of paragraph (1)(A) of this subsection shall be the day before any conversion which may be made prior to the date of enactment of the Committee bill, so as to render null and void any conversions made prior to the day after the rates of statutory pay systems are next adjusted, or November 1, 1977, whichever is earlier.

Title II—Cost: Enactment of the provisions in title II of the Committee bill will cost $4.76 million in fiscal year 1978—$4.05 million for the special-pay program as extended and modified, and $710,000 for amendments pertaining to the salaries of podiatrists and optometrists.

TITLE III—HEALTH CARE PROGRAM AND ELIGIBILITY AMENDMENTS

Section 301—Amends subchapter II of chapter 17 by adding a new section 612A establishing a program of readjustment professional counseling for any veteran (including family members under certain circumstances) who served on active duty in the Armed Forces after August 4, 1964, or prior thereto in the Indochina conflict. Substantially similar programs were passed by the Senate in S. 2108 (92d Congress), S. 284 (93d Congress), and S. 2908 (94th Congress).

Subsection (a) of section 301 adds a new section 612A ("Eligibility for readjustment professional counseling") in subchapter II of chapter 17, as follows:

New section 612A: Subsection (a) requires the Administrator to furnish readjustment professional counseling (including a general mental and psychological assessment in connection therewith) to any veteran who served on active duty after August 4, 1964, or prior thereto in the Indochina conflict, who has readjustment problems, and who requests such assistance within a period of 4 years after the date of the veteran's discharge or release from active-duty service or 2 years after the date of enactment of the new section 612A, whichever is later.

Subsection (b) provides that if, on the basis of initial counseling, it is determined by a VA physician (or in areas where no such physician is available, by a physician under a contract or fee arrangement with the VA) that mental health services are necessary to facilitate the successful readjustment of the veteran, such services may be furnished on an outpatient basis (including discretionary counseling and mental health

services for family members under the terms of section 601(6)(B) of title 38, where essential to the effective treatment and rehabilitation of the veteran) provided the veteran has met all eligibility requirements for post-hospital care under section 612(f)(1)(B), except that the initial counseling is deemed to satisfy the requirement of prior hospitalization. If the veteran is not eligible for such care and services, the Administrator is required to provide referral services to assure, to the maximum extent practicable, that the veteran receives such care from sources outside the VA.

Subsection (c) directs the Chief Medical Director to provide for the training of paraprofessional and lay personnel, in addition to professional personnel, and to make maximum possible use of these paraprofessional personnel, voluntary workers, and veteran students in the initial intake and screening activities under new section 612A.

Subsection (d) further directs the Administrator, in cooperation with the Secretary of Defense, to take all appropriate action under the outreach services program provided for in section 241 of title 38 to insure that all veterans (and terminating service personnel) eligible for readjustment professional counseling are advised of their eligibility and encouraged to take full advantage of it.

Subsection (b) of section 301 amends the table of sections at the beginning of chapter 17 to reflect the addition of the new section 612A made by subsection (a) of this section of the Committee bill.

Section 301—Cost: Enactment of the provisions in section 301 of the Committee bill will cost $15.36 million in fiscal year 1978—$12.39 million for readjustment professional counseling, and $2.57 million for induced medical services relating to outpatient mental health care services.

Section 302—Amends chapter 17 of title 38 by adding a new subchapter VII establishing a comprehensive preventive health care program for eligible veterans. Substantially similar provisions were passed by the Senate in S. 2108 (92d Congress), S. 284 (93d Congress), and S. 2908 (94th Congress).

Subsection (a) of section 302 amends chapter 17 by adding a new subchapter VII to provide for a preventive health care program for veterans with service-connected disabilities and to authorize the Administrator to carry out a pilot program (including research) on a geographical or other basis to determine the cost-effectiveness and medical advantages of furnishing comprehensive preventive health care services to veterans with service-connected disabilities. Under the amendment, four new sections are added to chapter 17, as follows:

New section 661: Describes the purpose of the new subchapter.

New section 662: Defines "preventive health care services" which may be included in such programs. Such services may include but are not limited to periodic medical and dental examinations; patient health education (including nutrition education); maintenance of drug use profiles, patient drug monitoring, and drug utilization education; mental health preventive services (including family counseling); substance (including tobacco) abuse prevention measures; immunizations against infectious diseases; prevention of musculoskeletal deformity or other gradually developing disabilities of a metabolic or degenerative nature; genetic counseling concerning inheritance of genetically determined diseases; routine vision testing and eye care services; and periodic reexamination of high risk groups for selected diseases and for functional decline of sensory organs together with attendant appropriate remedial intervention; and such other medical services as may be necessary for providing effective and economical preventive health care.

New section 663: Paragraph (1) of subsection (a) authorizes the Administrator, pursuant to regulations, to furnish, on an inpatient, outpatient, or ambulatory basis, nationally or geographically, such preventive health care services as are feasible and appropriate to any veteran in connection with the treatment of a service-connected disability and, in the case of a veteran suffering from a service-connected disability rated at 50 percent or more, such preventive health care services as are feasible and appropriate to insure the best possible health care.

Paragraph (2) of subsection (a) authorizes the Administrator to institute controls and conduct followup studies (including research) to demonstrate the medical advantages and cost-effectiveness of the preventive health care services furnished under paragraph (1).

Subsection (b) authorizes the Administrator, pursuant to regulations, to carry out a health maintenance pilot program to demonstrate the medical advantages and cost-effectiveness of comprehensive preventive health care services. The pilot program is to begin on October 1, 1978, is limited to the provision of comprehensive preventive health care services to not more than 10,000 veterans with service-connected disabilities, and has a 10-year lifetime.

Subsection (c) directs the Administrator to utilize interdisciplinary health care teams in carrying out such a preventive health care program which, to the maximum extent feasible, shall be composed of various professional and paraprofessional personnel, especially nurses, pharmacists, psychologists, podiatrists, optometrists, technicians, physician assistants, and expanded-function dental auxiliaries.

Subsection (d) directs the Administrator, not later than 90 days after the date of enactment of new section 663, to advise each veteran eligible for preventive health care services of the nature and likely extent of the veteran's eligibility for such care.

New subsection 664: Directs the Administrator to include in the annual report to Congress, a comprehensive report on the administration of new subchapter VII, including recommendations for additional legislation deemed necessary.

Subsection (b) of section 302 amends the table of sections at the beginning of chapter 17 to add a reference to the new subchapter VII added to title 38 by subsection (a) of section 302 of the Committee bill.

Subsection (c) of section 302 provides that the programs authorized by the new subchapter VII except the health maintenance pilot program shall be effective with respect to services furnished on and after April 1, 1978.

Section 302—Cost: Enactment of the preventive health care programs set forth in section 302 of the Committee bill will cost $2.85 million in fiscal year 1978. In fiscal year 1979, the first year of the health maintenance pilot program, the cost resulting from such enactment will be $12.95 million.

Section 303—Establishes a special program for the treatment and rehabilitation of veterans with alcohol or drug dependence or abuse disabilities. Substantially similar provisions were passed by the Senate in S. 2108 (92d Congress), S. 284 (93d Congress), and S. 2908 (94th Congress).

Subsection (a) of section 303 amends subchapter II of chapter 17 by adding a new section 620A as follows:

New section 620A: Paragraph (1) of subsection (a) directs the Administrator to carry out specialized medical programs providing such inpatient and outpatient treatment (including treatment of the symptoms of detoxification, individual counseling and referral services, and crisis intervention), and rehabilitative services on a nationwide basis to veterans eligible for chapter 17 health care benefits, in accordance with revised discretionary eligibility requirements under paragraph (2) of this subsection, who are suffering from alcohol or drug dependence or abuse disabilities. The Administrator is further directed to utilize the most efficacious available treatment and rehabilitation modalities (stressing, to the maximum extent practicable, in such programs the utilization of satellite facilities, halfway houses, encounter-style therapeutic communities, and counselors who have recovered from such disabilities) extending beyond the detoxification period and designed to bring about, to the maximum extent possible, the recovery of the patient and, to the maximum extent practicable, the restoration of such patient to society as a productive, self-sufficient citizen. The Administrator is authorized to contract with private halfway-house facilities in accordance with regulations.

Paragraph (2) of subsection (a) provides the Administrator with discretionary authority, pursuant to regulations, to furnish drug and alcohol treatment and rehabilitative services to any former active-duty personnel who abused drugs or alcohol during active-duty service, including those with administrative discharges under other than honorable conditions, but not including those who are barred from receiving benefits under section 3103 of title 38 and those whose eligibility would otherwise be based on a period of service from which they were discharged by reason of a bad conduct discharge.

Subsection (b) authorizes the Administrator to provide treatment and rehabilitative services to a veteran (at VA expense up to an amount deemed reasonable by the Administrator) in community facilities approved by the Administrator whenever (1) a member of the veteran's immediate family is suffering from an alcohol or drug dependence or abuse disability, (2) it is deemed essential to the successful treatment and rehabilitation of a veteran receiving initial evaluation or treatment under the new section 620A that the veteran and immediate family member be treated in the same program, and (3) the veteran and immediate family member have both been accepted for treatment (the family member not at VA expense) in the community facility.

Subsection (c) requires the Administrator to offer each veteran receiving treatment under this section a drug-free treatment modality unless medically contraindicated.

Subsection (d) requires the Administrator to utilize all available resources of the VA, including the use of peer-group veterans, in seeking out and counseling toward treatment and rehabilitation those veterans who are eligible for alcohol or drug treatment and rehabilitative services under the new section 620A.

Subsection (e) directs the Administrator to take all appropriate steps, in consultation with the Secretary of Labor and the Chairman of the Civil Service Commission, to urge all Federal agencies and appropriate private and public firms, organizations, agencies, and persons to provide appropriate employment and training opportunities for veterans provided treatment and rehabilitative services under the new section 620A who have been determined by competent medical authority to be sufficiently rehabilitated to be employable; and to provide all possible assistance to the Secretary of Labor in placing such veterans in such employment opportunities.

Subsection (f) directs the Administrator, upon receiving an application for treatment and services under the new section 620A from a veteran with a discharge other than an Honorable or General Discharge, to (1) advise the veteran of his or her right to apply to the appropriate military service to

obtain a review of the nature of such discharge with a view toward removing any bar to eligibility for the receipt of veterans benefits under title 38; (2) advise the veteran of current military policy regarding the review of discharges received in connection with drug use or possession; and (3) advise the veteran of all programs under title 38 and any other law to which the veteran is entitled, and would be entitled if the veteran had a General or Honorable Discharge.

Paragraph (1) subsection (g) directs the Administrator to provide for treatment and rehabilitative services in the case of any veteran eligible under the new section 620A who has been charged with, or convicted of, a criminal offense by any court of competent jurisdiction in the United States, who is not confined, and who is not required to participate in the treatment and rehabilitation by such court.

Paragraph (2) of subsection (g) authorizes the Administrator to provide (either in VA-directly-administered facilities or programs or those under contract) for treatment and rehabilitative services to any veteran eligible under the new section 620A who has been criminally charged or convicted and who is required to participate in a treatment and rehabilitation program by a court of competent jurisdiction, but only under such conditions as the Administrator determines, on a case-by-case basis, will insure that the veteran's participation in the particular program will not impair the voluntary nature of the services provided other patients in such program.

Subsection (h) establishes procedures and requirements regarding the transfer, and treatment therein, of active-duty service personnel to VA health care facilities in connection with an alcohol or drug disability.

Paragraph (1) of subsection (h) provides for the transfer of a member of the active military, naval, or air service with an alcohol or drug dependency or abuse disability to a VA medical facility for treatment pursuant to mutually agreed upon terms between the Secretary of the military department concerned and the Administrator and subject to reimbursement by such department. Such transfers are authorized only within the last 30 days of a tour of duty. After such a transfer, such individual would receive treatment and rehabilitative services on the same terms and conditions as prescribed for a veteran in the new subchapter.

Paragraph (2) of subsection (h) prohibits transfers under new section 620A unless the individual in question specifically requests transfer for a specified period of time within the remaining tour of duty and does so in writing, and further prohibits the extension of such treatment beyond such specified period of time unless the individual specifically requests a specified extension and such request is approved by the Secretary and the Administrator.

Subsection (i) directs the Administrator to submit, as part of the VA's annual report, full reports on the programs carried out under the new section 620A.

Subsection (b) of section 303 amends the table of sections at the beginning of chapter 17 to reflect the addition of the new section 620A made by the amendments in subsection (a) of section 303.

Section 303—Cost: Enactment of the drug and alcohol dependence and abuse treatment and rehabilitation provision will, taking into account savings attributable to the use of halfway-house placements instead of hospital admissions in a substantial number of cases, cost only $4.4 million in fiscal year 1978.

Section 304—Amends title 38 of the United States Code to eliminate minor inequities in the law regarding (1) the eligibility for veterans' benefits under certain circumstances when the individual extends his or her period of service, and (2) the entitlement of certain veterans to dental care.

Subsection (a) of section 304 amends section 101(18) of title 38, defining the term "discharge or release", in order to assure eligibility for veterans' benefits to one who has satisfactorily completed a period of service equal in length of time to his or her originally intended period of service when he or she has not received a discharge or release at the completion of that period because of having extended active-duty service.

Subsection (b) amends section 612(b)(2)(B), regarding eligibility for VA dental care within 1 year of discharge or release from service, to correct a minor, but clear, inequity in the statutory provision governing eligibility for the treatment of service-connected dental conditions and disabilities which are not compensable in degree, by reinstating, after subsequent active service in the cases of persons with less than a 1-year break in service, the 1-year post-service period within which application must generally be made to the VA for such dental treatment.

Section 304—Cost: Enactment of this section will involve no significant cost in fiscal year 1978.

CONCLUSION

Mr. CRANSTON. Mr. President, in closing I want to express my particular appreciation to the two cosponsors of S. 1693, the Senator from West Virginia (Mr. RANDOLPH) and the Senator from New Hampshire (Mr. DURKIN), from which major portions of this legislation derived, and to the ranking minority member of the Subcommittee on Health and Rehabilitation, the Senator from South Carolina (Mr. THURMOND), and to the ranking minority member of the committee, the Senator from Vermont (Mr. STAFFORD), for their excellent work and bipartisan spirit of cooperation in the development of this measure. These Senators and all other members of the committee have, in their work on this bill, evidenced their continuing deep concern for the health of our Nation's veterans. I also wish to thank for their diligent and effective work, committee staff members Ed Scott, Jon Steinberg, Harold Carter, Marian Laster, Garner Shriver, Gary Crawford, and Louise Ringwalt.

AMENDMENT NO. 839

Mr. STONE. Mr. President, I send an amendment to the desk, amendment No. 839, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Florida (Mr. STONE), for himself and Mr. CHILES, proposes amendment No. 839.

Mr. STONE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

TITLE IV—RENAMING THE VETERANS' ADMINISTRATION HOSPITAL IN TAMPA, FLORIDA

SEC. 401. The Veterans' Administration hospital located at 13000 North Thirtieth Street, Tampa, Florida, shall hereafter be known and designated as the "James A. Haley Veterans' Hospital". Any reference in a law, map, regulation, document, record, or other paper of the United States to such hospital shall be held to be a reference to the James A. Haley Veterans' Hospital.

Mr. STONE. Mr. President, it is my pleasure to join with my senior colleague from Florida, Senator CHILES, in introducing this amendment to name the veterans' hospital in Tampa, Fla., the "James A. Haley Veterans' Hospital."

This amendment is identical to a bill which has passed the House of Representatives unanimously on two separate occasions, most recently on June 20, 1977. It has the support of the entire Florida congressional delegation.

Former Representative James Haley was a Member of the House of Representatives for 24 years and served with distinction on the House Committee on Military and Veterans' Affairs. As chairman of the Hospital Subcommittee Representative Haley was instrumental in improving veterans' health care throughout the United States.

There could be no more fitting tribute than to name the Tampa hospital after James A. Haley.

Mr. CRANSTON. Mr. President, as a general rule, I oppose naming VA hospitals by legislation. I also think it unwise to name facilities after living persons.

However, since this provision has the support of both Senators from Florida (Mr. STONE and Mr. CHILES) and all members of the Florida congressional delegation and has already been approved by the other body, I will not object to it being raised in this fashion without a rollcall.

I oppose the amendment, and will vote against it.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 790

Mr. THURMOND. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from South Carolina (Mr. THURMOND) proposes unprinted amendment No. 790.

Insert at the end thereof the following new title:

"TITLE V—RENAMING THE VETERANS' ADMINISTRATION HOSPITAL IN BEDFORD, MASS.

"SEC. 501. The Veterans' Administration hospital located at 200 Springs Road, Bedford, Massachusetts, shall hereafter be known and designated as the 'Edith Nourse Rogers Memorial Veterans' Hospital'. Any reference in law, map, regulation, document, record, or other paper of the United States to such hospital shall be held to be a reference to the "Edith Nourse Rogers Memorial Veterans' Hospital'."

Mr. THURMOND. Mr. President, Edith Nourse Rogers, former Congresswoman from the State of Massachusetts, was first elected to the 69th Congress. During her outstanding tenure as Congresswoman, one of her most auspicious accomplishments was as chairman of the House Committee on Veterans' Affairs, which office she held during the 80th and 83d Congresses.

Mrs. Rogers first activities in the field of disabled veterans was when she served with the American Red Cross in the care of disabled soldiers in the First World War in 1917.

Congresswoman Rogers passed away September 10, 1960, and this being the month of September, there could not be a more propitious time to remember her outstanding service spanning 35 years in the Congress of the United States, the majority of which time was spent benefiting the Nation's veterans.

It behooves us to honor this noblewoman today by naming the Veterans' Administration hospital in Bedford, Mass., the "Edith Nourse Rogers Memorial Veterans' Hospital."

My amendment has been sent to the desk and been reported.

I might state that I am informed that the Senators from Massachusetts do approve of this amendment.

Mr. CRANSTON. Mr. President, I will vote "no" for the same reasons I stated with respect to the prior amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from South Carolina.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment, the question is on agreeing to the committee amendment, as amended.

The committee amendment was agreed to.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

The title was amended so as to read:

An Act to amend title 38 of the United States Code to clarify the circumstances under which contract hospital care and medical services may be provided; to extend the authority to enter into special pay agreements with physicians and dentists and to modify the provisions of law with respect thereto; to improve the quality of hospital care and medical services in Veterans' Administration health care facilities; and for other purposes.

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the bill passed.

Mr. THURMOND. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

CRUDE OIL PRICING AMENDMENTS OF 1977

Mr. JOHNSTON. Mr. President, yesterday I introduced S. 2073, the Crude Oil Pricing Amendments of 1977. Through inadvertence I failed to request that the text of the bill be printed in the RECORD. I ask now, Mr. President, unanimous consent that the text of S. 2073 as well as the text of the attached statement be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSTON. Mr. President, I am introducing S. 2073, the Crude Oil Pricing Amendments of 1977. The purpose of this legislation is to correct a crude oil pricing system enacted in December, 1975. Since December, 1975 it has become painfully apparent that the mechanism enacted then has not worked.

As you will remember, Mr. President, Congress established, in the Energy Policy and Conservation Act of 1975, a composite price of $7.66 per barrel for all domestically produced crude oil. The President was given the authority to establish ceiling prices for different classifications of crude oil so long as the weighted average composite price of domestic crude oil remained at $7.66 per barrel, which was allowed to increase with inflation. Unfortunately, the legislation and initial Presidential action setting ceiling prices was predicated on certain facts and assumptions which have proven to be incorrect. The result has been a series of price freezes and price roll backs since February, 1976, which have caused the real dollars received for certain crude oil production to decrease since February, 1976. The Congress did not intend this result. However, it is a result which logically follows from the establishment of a mandatory composite price level.

This legislation, Mr. President, proposes to abolish the composite pricing system, but to continue price controls on "upper tier" and "lower tier" oil. The controlled price of these two classifications of oil be the February, 1976 price established under the composite pricing system plus inflation since that date. Both "upper tier" and "lower tier" crude oil would be allowed to rise in the future with inflation, as determined by the GNP deflator.

In addition, the legislation allows the President to establish different categories of oil which may receive ceiling prices higher than those established for "upper tier" and "lower tier" crude oil if the President makes certain findings. The findings are extracted from the composite pricing system and in general, must indicate that such classifications and higher ceiling prices are needed to encourage increased production of domestic crude oil.

Finally, this legislation proposes to exempt two classifications of crude oil from price controls. First, the legislation continues the exemption for crude oil produced from stripper wells. This exemption is the same exemption which was enacted as part of the Energy Conservation and Production Act of 1976. Second, the legislation creates a new classification referred to as "newly discovered crude oil" which is exempt from price controls. "Newly discovered crude oil" is defined as that crude oil produced from a reservoir which was first penetrated by a well the surface drilling for which commenced on or after April 20, 1977. This exemption reflects the proposal President Carter made when he announced his energy proposals on April 20. However, the President intended that this new classification of oil be made by the Federal Energy Administration through a rulemaking procedure and that the classification be subject to the existing composite pricing system.

Mr. President, I am convinced that this legislation is needed to encourage maximum domestic crude oil production. Producers should not be subject to the freezes and rollbacks the present pricing system has caused. Further, maximum price incentives should, as the President suggested, be given to newly discovered domestic crude oil. Crude oil pricing cannot be ignored in a comprehensive national energy plan. Therefore, I urge my colleagues to give serious consideration to this pricing proposal which will be fair to the consumer, while encouraging maximum domestic crude oil production.

S. 2073

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Crude Oil Pricing Amendments of 1977."

SEC. 2. Section 8 of the Emergency Petroleum Allocation Act of 1973 is amended by:

(a) deleting section (a) and inserting in lieu thereof the following new section (a) as follows:

"(a) Not later than the first day of the second full calendar month following the date of enactment of this section, the President shall promulgate and make effective an amendment to the regulation under section 4(a) of this Act which regulation, as amended, shall establish ceiling prices (or the manner of determining ceiling prices) in accordance with subsection (b) applicable to the first sale of that crude oil produced in the United States."

(b) deleting section (b) and inserting in lieu thereof the following new section (b) as follows:

"(b) (1) The regulation under section 4 (a), as amended, shall:

"(A) provide a ceiling price for old crude oil equal to the average first sale price for such oil during the month of February 1976, as adjusted to take into account the impact of inflation since February 1976, as measured by the adjusted GNP deflator; and

"(B) provide a ceiling price for new crude oil equal to the average first sale price for such oil during the month of February 1976, as adjusted to take into account the impact of inflation since February 1976, as measured by the adjusted GNP deflator.

"(2) As used in this subsection, the terms 'old crude oil' and 'new crude oil' mean those terms as defined in sections 212.72 of title 10, Code of Federal Regulations, as in effect on June 1, 1977.

"(3) As used in this subsection, the term 'adjusted GNP deflator' means the first revision of the quarterly percent change, seasonally adjusted at annual rates, of the most recent implicit price deflator for the gross national product which shall be computed and published for each calendar quarter by the Department of Commerce, subject to such additional modification as the President shall make to exclude therefrom any amount which he determines is attributable solely and directly to increases which occur after the date of enactment of this section in prices of imported crude oil, residual fuel oil, or any refined petroleum product resulting from concerted action of two or more petroleum exporting countries."

(c) deleting section (c) and inserting in lieu thereof the following new section (c) as follows:

"(c) The regulation under section 4(a), as amended, may provide, in any calendar year, for different classifications of a maximum of three percent of the crude oil produced in the United States, first sale prices higher than the ceiling prices specified in subsection (b) of this section. In providing for such different classifications of crude oil and such higher first sale prices, the President shall determine that such classifications and such first sale prices:

(1) will give positive incentives for (A) enhanced recovery techniques, or (B) deep horizon development; or

(2) are necessary to take into account declining production; or

(3) are likely to result in a level of production beyond that which would otherwise occur; and

(4) are administratively feasible; and

(5) are justified on the basis that such prices and such classifications are consistent with obtaining optimum production of crude oil in the United States."

(d) deleting subsection (d) and inserting

in lieu thereof the following new section (d) as follows:

"(d)(1)(a) The first sale price of stripper well crude oil shall be exempt from the regulation promulgated under section 4(a) of this Act as amended pursuant to the requirements of this section.

(b) For the purposes of this subsection, "stripper well crude oil" means crude oil produced and sold from a property whose maximum average daily production of crude oil per well during any consecutive 12 month period beginning after December 31, 1972, does not exceed 10 barrels.

(c) To qualify for the exemption under this subsection, a property must be producing crude oil at the maximum feasible rate throughout the 12 month qualifying period and in accordance with recognized conservation practices.

(d) The President may define terms used in this subsection consistent with the purposes thereof.

(2)(a) The first sale price of newly discovered crude oil shall be exempt from the regulation promulgated under Section 4(a) of this Act as amended pursuant to the requirements of this subsection.

(b) For the purposes of this subsection, "newly discovered crude oil" means crude oil produced and sold from a new reservoir which new reservoir is an underground formation which contains a producible accumulation of oil or gas, or both, and which is separate and distinct from, and not in communication with, any other formation which contains producible oil or gas, or both, provided such formation was first penetrated by a well the surface drilling for which was commenced on or after April 20, 1977.

(c) The President may define terms used in this subsection consistent with the purposes thereof."

(d) deleting subsections (e), (f), (g), and (i) and relettering subsection (i) as subsection (e).

NATIONAL ENERGY CONSERVATION POLICY ACT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 369.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 2057) to establish a comprehensive national energy conservation policy.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. HANSEN. Mr. President, I ask unanimous consent that the following staff members be given floor privileges during the consideration of and voting on S. 2057: Tom Wylie, Fred Craft, Chuck Trabandt, Carol Sacchi, Faye Widenmann, and Nolan McKean.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHURCH. Mr. President, I ask unanimous consent that Mr. Phil Corwin be afforded the privilege of the floor during consideration of S. 2057.

The PRESIDING OFFICER. Without objection. it is so ordered.

Mr. JOHNSTON. Mr. President, S. 2057, the National Energy Conservation Policy Act is the third major portion of President Carter's proposed National Energy Act reported by the Committee on Energy and Natural Resources and considered by the Senate this session. S. 701, providing energy conservation assistance to schools and hospitals, was passed by the Senate on July 20, 1977, and S. 977, the coal conversion bill, was passed yesterday.

The Committee on Energy and Natural Resources completed action on the National Energy Conservation Policy Act prior to the recent August recess, and the committee's report was filed on August 18. The committee deliberations on the bill were characterized by a substantial degree of bipartisan cooperation. I would like to congratulate Senator HANSEN, the ranking member for the minority, for the leadership he displayed during these deliberations. We have a good bill, a bill which will conserve energy without placing an undue burden on any segment of our society. I think I express the wishes of a substantial majority of the members of the committee in urging prompt action by the Senate on this bill.

The purpose of the National Energy Conservation Policy Act is to establish a mixture of voluntary and mandatory energy conservation programs designed to significantly reduce the rate of growth in domestic energy consumption. Between 1975 and 1976 total energy consumption in the United States rose by 5.1 percent. If this rate continues, U.S. energy consumption in 1985 will be nearly 50 percent higher than present use. Reducing the rate of growth in domestic consumption only 1 percent would save the energy equivalent of approximately 3.5 million barrels of oil per day in 1985.

In order to move toward lower levels of energy use, the bill requires the Nation's electric and natural gas utilities to assist homeowners in identifying and arranging for the financing and installation of energy conservation measures, establishes conditions to stimulate capital availability for financing residential energy conservation measures, and accelerates incentives to increase the share of residential energy consumption provided by solar energy. The Federal Energy Administration is directed to prescribe mandatory energy efficiency standards for home appliances and for certain industrial equipment. Minimum mileage levels are established for new automobiles produced after model year 1980.

A strong energy conservation program for the Federal establishment is mandated along with vigorous Federal demonstration efforts in vanpooling, solar heating and cooling and the use of photovoltaic devices. Funding for existing energy conservation programs is extended and increased.

The bill before the Senate addresses the same subject matter as parts A, B, and G of S. 1469, the nontax provisions of the President's energy proposal. The committee adopted amendments to the provisions proposed by the administration and, in addition, included several new provisions in S. 2057.

While the provisions of S. 1469 are predominantly within the jurisdiction of the Committee on Energy and Natural Resources, subject matter of interest to five other Senate committees is also addressed by the bill. This subject matter in each case involves energy conservation. The interested committees are:

Banking, Housing, and Urban Affairs;

Commerce, Science, and Transportation;

Human Resources;

Government Affairs; and

Environment and Public Works.

These committees were consulted by the Committee on Energy and Natural Resources concerning their views on S. 1469. Correspondence reflecting this consultation is reprinted in the committee's report. Formal recommendations were received from two of these committees, the Committee on Human Resources and the Committee on Banking, Housing, and Urban Affairs.

Mr. President, I ask unanimous consent that a summary of the major provisions of S. 2057 as reported by the committee be inserted in the RECORD at this point, and I strongly urge the Senate to adopt this legislation.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF MAJOR PROVISIONS

The Committee on Energy and Natural Resources in open sessions held on July 26–29 and on August 1, considered parts A, B and G of S. 1469, the energy conservation provisions of the energy legislation announced by the President on April 20, 1977, along with a number of additional energy conservation proposals developed by members of the committee. On August 1 the committee ordered an omnibus energy conservation bill, the "National Energy Conservation Policy Act", favorably reported to the Senate.

The provisions of the National Energy Conservation Policy Act, which is organized into four titles, are discussed below.

THE NATIONAL ENERGY CONSERVATION POLICY ACT

TITLE I: ENERGY CONSERVATION PROGRAMS FOR EXISTING RESIDENTIAL BUILDINGS

Utility and home heating supplier programs

Electric and natural gas utility companies in each State would be required to participate in a program (established pursuant to a plan filed with the Federal Energy Administration by the Governor) to offer to inspect and advise each customer about the appropriate energy conservation measures for the residential building the customer owns or occupies, to arrange for the installation and financing of the measures chosen and to collect from the customer for the costs of purchasing and installing the measures chosen on the regular utility billing cycle.

Each nonregulated utility would be required to file a plan of its own directly with the Administrator. Suppliers of home heating fuel (heating oil, propane and butane, etc.) would be included in each State plan and could participate in the program on a voluntary basis.

After enactment, no new electric and natural gas utility conservation program could be initiated incorporating the installation and financing of energy conservation measures by the utility itself. Each utility would, however, be required to organize a package of services for each interested customer, providing information about sources of financing, interest rates and available installation contractors as well as inspection and billing services. Existing utility programs could continue provided other standards specified in the bill are met. These prohibitions would

not apply where a State law requires or explicitly permits a utility to install or finance energy conservation measures, nor would they apply to suppliers of home heating fuel.

Financing programs

The National Housing Act is amended to permit utilities to be considered lenders under the Department of Housing and Urban Development Title I (home improvement) loan program.

In addition, both the Federal Home Loan Mortgage Corporation and the Federal National Mortgage Association would be authorized to purchase loans for residential energy conservation measures.

A special financing program is offered for persons installing residential energy conservation measures through the utility program. The Government National Mortgage Association would be authorized to purchase up to $5 billion in 90 percent federally insured loans of up to $2,500 to persons of all income groups to finance these residential energy conservation measures. The interest rate on these loans would be between approximately 7 and 12 percent per year.

The committee also adopted an amendment which would establish a revolving fund of $100 million administered by the Secretary of Housing and Urban Development to provide loans for the installation of solar heating and cooling equipment in residential dwellings. These loans would be made directly by the Secretary to applicants at 4 percent annual interest for periods of up to 15 years.

TITLE II: ENERGY EFFICIENCY STANDARDS FOR CONSUMER PRODUCTS

Title II requires the Administrator of the Federal Energy Administration to set mandatory energy efficiency standards by January 1, 1980 for refrigerators, refrigerator-freezers, freezers, water heaters, room air-conditioners, kitchen ranges and ovens, central air-conditioners, furnaces, clothes dryers, and home heating equipment other than furnaces. Discretionary authority is granted to set standards for dishwashers, television sets, clothes washers, humidifiers and dehumidifiers and any other product the Administrator chooses that consumes at least 150 kwh/year per household or 4.2 billion kwh per year.

Small manufacturers may be exempted from the standards for up to 2 years. Different standards may be imposed on the same appliance category where models use different kinds of energy than others, (i.e., gas or electricity) or where a different performance related feature of an appliance (as, for example, in a frost free refrigerator) justifies a separate standard.

As for preemption of State laws on appliance efficiency, the bill specifies, first, that State standards prescribed before January 1, 1978, will remain in effect. Second, those prescribed after that date are automatically preempted, even though Federal standards are not yet promulgated. This automatic preemption lasts until January 1, 1980, at which time States can once again prescribe their own standards. However, anytime a Federal standard is promulgated, all State standards for that category are superceded. The bill permits a State or manufacturer to appeal to the Administrator for a different result on preemption than above by showing (a) whether there is a substantial State or local interest sufficient to justify the standard and (b) whether there is an undue burden on interstate commerce.

For the purposes of preemption, a State standard that requires or bans specific energy-related components in appliances is treated as a performance standard for that category of appliance.

TITLE III: FEDERAL ENERGY INITIATIVES

Federal van pooling program

The bill provides that van pooling arrangements be offered to employees of the Federal Government under a program established by the Administrator of the Federal Energy Administration. To carry out the program, the General Services Administration may lease, purchase, or otherwise acquire up to 6,000 vans. Charges to passengers will be adjusted so that after 8 years all costs to the Federal Government, including estimated administrative costs, will be repaid. Part of the rider charge will cover self-insurance of the Federal Government for protection against liability. The van operator must be a regular full-time Federal employee, licensed to operate the van, and he must keep the van in safe working order. He may use it for personal use. The operator may be exempted from paying any rider charge and he may be compensated for his services.

The authorization for the program is set at $15 million for each of the fiscal years 1978, 1979, 1980, 1981, and $3 million for fiscal year 1982.

Energy conservation and solar energy in Federal buildings

The Administrator of the General Services Administration (GSA) is to establish life cycle capital and operating cost methods for all Federal buildings. Cost considerations for new Federal buildings must be determined on the basis of life cycle costs. The Administrator of GSA in consultation with other Federal agencies is to establish energy conservation and life cycle efficiency goals for all Federal buildings and to encourage attainment of those goals. An energy survey must be performed on each Federal building containing over 30,000 square feet of floor space and the overall results reported to Congress before August 15, 1978. The results of surveys of buildings containing between 1,000 and 30,000 square feet must be reported to Congress before August 15, 1979.

In leasing buildings, the Federal Government must give preference to buildings using solar heating and cooling equipment or having a high degree of energy efficiency. GSA and the Federal Energy Administration are to conduct a study of the energy conservation potential in Federal buildings and develop a schedule to assure implementation of the maximum possible life cycle cost effectiveness in these buildings by 1990.

Each Federal agency would be required to show expenditures aimed at improving life cycle cost efficiency as a line item in its annual budget request. The Administrator of GSA is authorized $2 million in fiscal year 1978 to perform analytical and administrative functions under this bill. $25 million is authorized to the Administrator of the Federal Energy Administration in fiscal year 1978 for transfer to the GSA Administrator and other appropriate Federal agencies to implement energy conservation measures in Federal buildings in order to achieve life cycle cost efficiency goals.

Demonstration of solar heating and cooling in Federal buildings

The FEA Administrator is to develop and carry out a program to demonstrate solar heating and cooling technology in existing or proposed Federal buildings. The Administrator would develop criteria for evaluating agency proposals which would include cost/benefit analysis, and demonstration to the maximum extent practicable of innovative and diverse applications to a variety of buildings and to encourage the location of projects in areas where private sector markets for solar energy equipment are likely to develop. The Administrator would evaluate the proposals and transfer funds to implement those approved. The authorization for appropriation for the FEA Administrator through fiscal year 1980 is $100 million.

Use of advanced photovoltaic devices in Federal facilities

The Administrator of the Federal Energy Administrator would be required to procure photovoltaic solar electric generation systems (solar cells) for use by the Federal government in quantities sufficient to permit the use of automated production techniques by suppliers. $98 million is authorized for appropriation to the FEA Administrator for the three year period ending on September 30, 1981.

Federal purchase of vehicles equipped with passive restraint devices

All passenger vans and automobiles purchased by the Federal Government after fiscal 1978 shall be equipped, to the maximum extent technically feasible, with air-bag collision protection devices or other passive restraint systems.

TITLE IV: ADDITIONAL ENERGY CONSERVATION PROGRAMS

Energy efficiency of industrial equipment

The Administrator of the Federal Energy Administration not earlier than 2 years after development of testing procedures and labeling rules would be required to set energy efficiency standards for new industrial electric motors and pumps. The Administrator would have discretion to select the classes of pumps and motors for which he will set standards. Within three years, test procedures and labeling requirements must be established for a specified list of 14 categories of energy intensive industrial equipment in addition to electric motors and pumps. The Administrator would be granted discretionary authority to set standards for any of these categories of equipment no earlier than two years after the prescription of a labeling rule.

Minimum fuel efficiency standards for new automobiles

Each new automobile model sold in the United States after model year 1979 would have to exceed the following levels of fuel economy in the respective model years:

Miles per gallon:	Year
16	1980
17	1981
18	1982
19	1983
20	1984
21	1985

The penalty for noncompliance would be $10,000 per car. In additions, the fines for violating the fleet average fuel economy requirements of the Energy Policy and Conservation Act would be doubled from $50 per MPG to $100 per MPG per car.

Extension of State energy conservation programs

Authorization for Federal grant programs established by the Energy Policy and Conservation Act in 1975 and the Energy Conservation and Production Act in 1976 which provide support for energy conservation programs operated by State government would be extended through fiscal years 1979 and 1980 at a total authorization of $100 million per year. The Administrator of the Federal Energy Administration would be required to report to the Congress within 6 months after enactment on the coordination of Federal energy conservation programs involving State and local government.

Mr. JOHNSTON. The bill covers a multitude of subjects, including utility and home heating supplier programs, financing programs to implement the same, energy efficiency standards for consumer products, a Federal van-pooling program, energy conservation and solar energy programs in Federal buildings; a demonstration of solar heating and cooling in Federal buildings program; a program for the use of advanced photovoltaic devices in Federal facilities; Federal purchase of vehicles

equipped with passive restraint devices—the so-called air bags; standards for energy efficiency of industrial equipment; minimum fuel efficiency standards for new automobiles, as well as the extension of State energy conservation programs.

Mr. President, the bill is comprehensive, it is significant, it is important, but because of its many parts, I will not go into an extensive discussion at this time, because the extensive number of amendments will entail a discussion of each part of the program as the amendments come up.

Mr. President, I ask unanimous consent that Jim Bruce, Ben Cooper, Granville Smith, Dan Dreyfus, Mike Harvey, and Marjorie Gordner of the staff of the Senate Committee on Energy and Natural Resources and Bob Szabo of my personal staff, be accorded the privileges of the floor during the period of Senate consideration of S. 2057.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BURDICK. I would like to ask the distinguished floor manager a question concerning section 103 of this bill. Section 103 lists the services and information which utilities must offer to their consumers under State residential energy conservation programs. Specifically, section 103(a)(2)(A) states that a utility will offer inspection services to residential customers for a reasonable fee. My question concerns the meaning of a "reasonable fee." Many utilities have been providing these services free to their consumers for quite a while. For instance, Verendrye Electric Cooperative in Velva, N. Dak., offers this service free of charge to its member-consumers. Guadalupe Valley Rural Electric Cooperative in Texas has inspected hundreds of homes free and recommended energy conservation measures to homeowners. Also, I know that Blue Ridge Electric Membership Cooperative in Lenoir, N.C., and Middle Tennessee Electric Cooperative in Murfreesboro, Tenn., provide these energy conservation inspection services free. I am concerned that this provision of section 103 would require a utility which has previously not charged now to charge a fee for inspection services. Was this the intent of the committee?

Mr. JOHNSTON. I appreciate the Senator raising this question about the meaning of a "reasonable fee." The committee included this section in the legislation to prevent utilities from overcharging their consumers for the services outlined in section 103. However, if the utility has decided to offer these services described in section 103(a)(2)(A) free of charge—because really such services benefit all consumers of the utility—then a reasonable fee could be no charge. In other words, we did not intend to require utilities to charge their consumers for inspections; we simply wanted to make certain that such charges were not too high.

Mr. BURDICK. I thank the Senator for his clarification.

Mr. PERCY. Mr. President, today we are considering the National Energy Conservation Policy Act. This is a vitally important issue because the best way to produce more energy is to use what we have more efficiently. I am pleased that President Carter has proclaimed conservation to be the cornerstone of his energy policy.

Chairman JACKSON of the Energy Committee, ranking minority member, Senator HANSEN, and the other members of the committee deserve our profound thanks. They have labored hard and long to produce this Conservation Policy Act, not to mention the other portions of the National Energy Act.

We are often given a false view of conservation. The popular conception of conservation is curtailment: cold homes and long lines at the gas pumps. This is a myth. One of the reasons Senator HUMPHREY and I founded the Alliance to Save Energy was to show that conservation means increased efficiency: well-insulated homes and cars which get better mileage.

The Ford Foundation's Nuclear Power: Issues and Choices states:

> Conservation is one of the most effective means of making available additional energy to produce desired goods and services. Whatever the form of energy use, there will be ample opportunities for conservation. The higher the unit price of energy, the greater the benefit from a given energy saving . . .
>
> The fourfold increase in the price of imported oil since 1973 justifies conservation investments today that would not previously have repaid their cost. The conservation business, however, has not yet expanded to the extent that its profitability would appear to warrant, and industry has not realized the range of opportunities to reduce its costs through more efficient energy costs. (pp. 147–148)

Dennis Hayes, author of the recently published and widely praised book "Rays of Hope," had this to say before a congressional committee last April:

> Vast amounts of energy—upwards of half of all the fuel we currently consume—could be saved using existing technologies that are already economically practical. These savings are available in every sector of American society . . . but, by and large, they are not being tapped.

Mr. Hayes warned:

> It is only a matter of time until fuel supplies begin to dwindle; a country that runs on cheap oil must eventually run out.

The Congressional Research Service reported in June on the likelihood of reducing oil imports. It concluded that this country cannot reduce its dependence on foreign oil through increased domestic supplies in the next 10 years. The only way to sufficiently cut imports is to reduce energy demand.

The MIT Workshop on Alternative Energy Strategies report of this past May warned that conservation should be a top international priority. MIT Prof. Carroll Wilson, who directed the workshop, said:

> All our work can be boiled down to a single message. The free world must drastically curtail the growth of energy use and move massively out of oil into other fuels with wartime urgency. Otherwise we face forseeable catastrophe.

Mr. President, any conservation program must meet several new important criteria. It must not discriminate against the poor. New Federal regulation should be kept to minimum levels necessary. It must protect consumers against fraud and deceptive practices. And no private firms should receive undue competitive advantages or favors.

A conservation program should use a mix of approaches, and should be flexible in its application. Finally, it must show awareness of the latest innovations in conservation technology, and accommodate new energy-saving ideas.

I believe the Conservation Policy Act largely satisfies these criteria. But I wish to make several points about specific sections of the bill.

The programs for existing residences may well be the centerpiece of the bill. They provide the means for homeowners to save energy through conservation and solar equipment. The price and tax incentives in the energy tax package will provide further impetus for savings.

I am concerned about possible fraudulent schemes in conjunction with solar and conservation contracting. I also am worried about the potential for abuse in determining which firms get included on the State lists of contractors who do refit work. Problems in either area could undermine confidence in the effectiveness of the programs.

The low-income weatherization program is vital. Tax credits are of little help to persons who pay no taxes. However, I feel an additional weatherization program for the rural poor through the Farmers Home Administration might be an appropriate addition.

Consumers need to know how much energy appliances can save if they are to make wise purchase decisions. I thus fully support the consumer product provisions in this bill. I do, however, hope that issuance of standards will be expedited. It is my understanding that there have been delays in instituting labeling requirements pursuant to the Energy Policy and Conservation Act.

The most direct way to get solar products into general use is to purchase them. I strongly support the Federal solar procurement program, the photovoltaic procurement provision, and the life-cycle costing requirements for Federal buildings. All three will help put the solar industry on a sound footing. Costs will fall as expanding firms reap the benefits of economies of scale. The private sector will have hard evidence of the viability of these technologies. Finally, the Federal Government itself will benefit through lower operating costs for its buildings and installations.

I hope that when the time comes to write procurement contracts, small businesses will receive their fair share. I also encourage officials of the Department of Energy to require use of as wide a variety as possible of active and passive solar collector systems, as well as wind generators. It is far too early for Government agencies to settle into comfortable relationships with large suppliers, or to pick one or two best technologies.

The Federal initiatives do omit one major item. They fail to deal with the issue of free Federal parking. It is just not fair for taxpayers to subsidize the

private automobiles of Federal employees. I am offering an amendment to this bill which would institute a fee system for Federal and congressional workers.

Finally, I wish to emphasize the importance of the States in the promotion of energy conservation. The States are well ahead of Washington in the development of innovative approaches to encourage conservation. The additional appropriations for State conservation programs under the Energy Policy and Conservation Act will enable States and localities to continue their fine work in this area.

Let me finish, Mr. President, by saying that if we fail to save energy today, great sacrifices will be required in coming years. We will face economic disruption, and threats to our national security, if our alarming dependence on foreign energy sources is not curtailed. It is far better to take minor steps now than to suffer greatly tomorrow. I need not impress upon my colleagues the urgency and importance of this legislation. I urge their support.

Mr. JOHNSTON. Mr. President, I yield to the distinguished Senator from Idaho.

UP AMENDMENT NO. 791

Mr. CHURCH. Mr. President, on behalf of myself and Senators DOMENICI, CULVER, BROOKE, DECONCINI, and CHILES, I send an amendment to S. 2057 to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Idaho (Mr. CHURCH) for himself, Mr. DECONCINI, Mr. CHILES, Mr. CULVER, Mr. DOMENICI and Mr. BROOKE, proposes unprinted amendment 791.

Mr. CHURCH. I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 2, in the table of contents after item "Sec. 121." insert the following:

PART D—WEATHERIZATION GRANTS FOR THE BENEFIT OF LOW-INCOME FAMILIES

Sec. 131. Federal Energy Administration Weatherization Grant Program.
Sec. 132. Availability of Labor.
Sec. 133. Weatherization Study.
Sec. 134. Energy-Conserving Improvements for Public Housing.

On page 39, after line 24, insert the following:

PART D—WEATHERIZATION GRANTS FOR THE BENEFIT OF LOW-INCOME FAMILIES

FEDERAL ENERGY ADMINISTRATION WEATHERIZATION GRANT PROGRAM

SEC. 131. (a)(1) Section 412(7)(A) of the Energy Conservation in Existing Buildings Act of 1976 is amended—

(A) by inserting "125 percent of" after "is at or below"; and

(B) by inserting the following after "Budget,": "except that the Administrator may establish a higher level if the Administrator, after consulting with the Secretary of Agriculture and the Director of the Community Services Administration, determines that such a higher level is necessary to carry out the purposes of this part and is consistent with the eligibility criteria established for the weatherization program under section 222(a)(12) of the Economic Opportunity Act of 1964,".

(2) The last sentence of section 413(a) of such Act is amended by striking out "in which the head of the household is a low-income person." and inserting in lieu thereof "occupied by low-income families.".

(b)(1) Section 413(b) of such Act is amended by inserting the following new paragraph at the end thereof:

"(3) The Administrator, in coordination with the Secretaries and Director described in paragraph (2)(A) and with the Director of the Community Services Administration and the Secretary of Agriculture, shall develop and publish in the Federal Register for public comment, not later than 60 days after the enactment of this paragraph, proposed amendments to the regulations prescribed under paragraph (1). Such amendments shall provide that the standards described in paragraph (2)(A) shall include a set of procedures to be applied to each dwelling unit to determine the optimum set of cost-effective measures, within the cost guidelines set for the program, to be installed in such dwelling unit. Such standards shall, in order to achieve such optimum savings of energy, take into consideration the following factors—

"(A) the cost of the weatherization material;

"(B) variation in climate; and

"(C) the value of energy saved by the application of the weatherization material.

Such standards shall be utilized by the Administrator in carrying out this part, the Secretary of Agriculture in carrying out Farmer's Home Administration weatherization grant programs, and the Director of the Community Services Administration in carrying out weatherization programs under section 222(a)(12) of the Economic Opportunity Act of 1964. The Administrator shall take into consideration comments submitted regarding such proposed amendments and shall promulgate and publish final amended regulations not later than 120 days after the date of enactment of this paragraph.".

(2) Section 412(9) of such Act is amended to read as follows:

"(9) The term 'weatherization materials' means—

"(A) caulking and weatherstripping of all exterior doors and windows;

"(B) furnace efficiency modifications limited to—

"(i) replacement burners designed to reduce the firing rate or to achieve a reduction in the amount of fuel consumed as a result of increased combustion efficiency,

"(ii) devices for modifying flue openings which will increase the efficiency of the heating system, and

"(iii) electrical or mechanical furnace ignition systems which replace standing gas pilot lights;

"(C) clock thermostats;

"(D) ceiling, attic, wall, floor, and duct insulation;

"(E) hot water heater insulation;

"(F) storm windows and doors, multiglazed windows and doors, heat-absorbing or heat-reflective windows and door materials; and

"(G) such other insulating or energy conserving devices or technologies as the Administrator may determine, after consulting with the Secretary of Housing and Urban Development, the Secretary of Agriculture, and the Director of the Community Services Administration.".

(c) Section 415 of such Act is amended—

(1) by striking out "weatherization materials, except that" in subsection (a) and all that follows through the period at the end of such subsection and inserting in lieu thereof the following: "weatherization materials and related matter described in subsection (c), except that not to exceed 5 percent of any grant made pursuant to section 413(a) and not more than 5 percent of any amount allocated under this section may be used for administration in carrying out duties under this part."; and

(2) by striking out subsection (c) and inserting in lieu thereof the following:

"(c)(1) Except as provided in paragraph (2), not more than $800 of any financial assistance provided under this part may be expended with respect to weatherization materials and the following related matters for any dwelling unit—

"(A) the appropriate portion of the cost of tools and equipment used to install such materials for such unit;

"(B) the cost of transporting labor, tools, and material to such unit;

"(C) the cost of having onsite supervisory personnel; and

"(D) the cost (not to exceed $100) of making incidental repairs to such unit if such repairs are necessary to make the installation of weatherization materials effective.

"(2) The limitation of $800 described in paragraph (1) shall not apply if the State policy advisory council, established pursuant to section 414(b)(1), requests the Administrator to provide for a greater amount with respect to specific categories of units or materials in the State, and the Administrator approves such request.".

AVAILABILITY OF LABOR

SEC. 132. The following actions shall be taken in order to assure that there is a sufficient number of volunteers and training participants and public service employment workers, assisted pursuant to the Comprehensive Employment and Training Act of 1973 and the Older American Community Service Employment Act, available to work in support of weatherization programs conducted under part A of the Energy Conservation in Existing Buildings Act of 1976, section 222(a)(12) of the Economic Opportunity Act of 1964, and section 504 of the Housing Act of 1949:

(1) First, the Administrator of the Federal Energy Administration (in consultation with the Director of the Community Services Administration, the Secretary of Agriculture, and the Secertary of Labor) shall determine the number of individuals needed to supply sufficient labor to carry out such weatherization programs in the various areas of the country.

(2) After the determination in paragraph (1) is made, the Secretary of Labor shall identify the areas of the country in which there is an insufficient number of such volunteers and training participants and public service employment workers.

(3) After such areas are identified, the Secretary of Labor shall take steps to assure that such weatherization programs are supported to the maximum extent practicable in such areas by such volunteers and training participants and public service employment workers.

WEATHERIZATION STUDY

SEC. 133. The Administrator of the Federal Energy Administration, the Secretary of Housing and Urban Development, the Secretary of Agriculture, and the Administrator of the Community Services Administration shall conduct a joint study which shall monitor, in a coordinated manner, the weatherization activities authorized by this Act and amendments made thereby and those weatherization activities undertaken independently of this Act and such amendments. Such officials shall report to the Congress within one year from the date of enactment of this Act, and annually thereafter, concerning—

(1) the extent of progress being made through weatherization activities toward the achievement of national energy conservation goals;

(2) adequacy and costs of materials necessary for weatherization activities; and

(3) the need for and desirability of modifying weatherization activities authorized by this Act, and amendments made thereby, and of extending such activities to a broader range of income groups than are being assisted under this Act and such amendments.

ENERGY-CONSERVING IMPROVEMENTS FOR PUBLIC HOUSING

SEC. 134. (a) Section 5(c) of the United States Housing Act of 1937 is amended by adding the following new sentence at the end thereof: "In addition to any other authority to enter into annual contribution contracts under this subsection, the Secretary may, subject to the approval in appropriation Acts, enter into such contracts aggregating not more than $10,000,000 per annum for financing the purchase and installation of energy conserving improvements (as defined in subparagraph (2) of the last paragraph of section 2(a) of the National Housing Act) in existing low-income housing projects, other than projects assisted under section 8, which the Secretary determines have the greatest need for such improvements based on the energy consumption of the projects and the amount of such consumption which can be reduced by such improvements.".

(b)(1) The Secretary of Housing and Urban Development is authorized to make grants to finance energy conservation improvements to projects which are financed with loans under section 202 of the Housing Act of 1959, or which are subject to mortgages insured under section 221(d)(3) or section 236 of the National Housing Act. The Secretary shall make assistance available under this subsection on a priority basis to those projects which are in financial difficulty as a result of high energy costs.

(2) The Secretary shall establish minimum standards for energy conservation improvements to multifamily dwelling units to be assisted under this subsection.

(3) There are authorized to be appropriated to carry out the provisions of this subsection not to exceed $25,000,000.

Mr. CHURCH. First, Mr. President, I want personally to extend my congratulations to the distinguished Senator from Louisiana for the leadership he showed in drafting this legislation and steering it through the committee. I was a witness to his efforts and I think he is to be highly commended for the bill he has brought here this afternoon.

Mr. JOHNSTON. I thank the distinguished Senator.

Mr. CHURCH. Mr. President, it is my privilege today to introduce this amendment to S. 2057, the National Energy Conservation Policy Act, which will establish a coordinated national weatherization program for low-income Americans.

I believe that this amendment is vital to a weatherization program which is rational, coordinated, and directed to the total needs of low-income persons, especially the elderly poor.

Mr. President, we must decide whether the weatherization programs of the Federal Energy Administration, FEA, and Community Services Administration, CSA, should be coordinated in their activities and consistent in their regulations. This amendment will accomplish that in a manner which assures efficiency and provides a valid basis for comparing their efforts.

We must also decide whether the FEA program should serve the near-poor as well as the poor, and have limits for weatherization materials costs sufficient to meet the health needs of the elderly. This is especially important inasmuch as S. 2057, as reported, substantially increases the authorization for the FEA program.

And finally, we must decide whether CSA, the agency which has already weatherized over 207,000 homes of the poor, should have some input into FEA's weatherization policy and help FEA identify the areas of greatest need.

Evidence received before three recent hearings of the Special Committee on Aging, which I chair, underscored the necessity for an effective and coordinated national weatherization effort. The financial security and health of older Americans is today imperiled by rapidly escalating fuel costs. The special need for this amendment stems from the fact that the bulk of our elderly reside in older housing stock, much of it in need of proper insulation and other rehabilitation. For example, a 1973 HUD survey showed that 52 percent of those households headed by persons 65 or older live in pre-1939 housing.

I believe this amendment speaks very appropriately to this needy by—

Permitting the near-poor to receive FEA weatherization assistance by raising the eligibility level from 100 percent to 125 percent of poverty level.

Permitting insulation which is adequate by raising the materials cost limit for the FEA program from $400 to $800. Experience in the CSA has shown an average cost of about $400, but an upper limit of $800 is required to provide for houses requiring more extensive weatherization.

Assuring consistency and coordination by having the FEA and CSA programs follow the same rules for eligibility, grant limits, permissible activities, and weatherization standards.

Assuring further coordination and efficiency by requiring these agencies to consult with each other in developing programs and regulations.

Enactment of this amendment will not commit us to this arrangement indefinitely. In fact, it requires the Administrators of FEA and CSA, along with the Secretaries of Labor and Agriculture, to submit an annual report on the total weatherization effort. This requirement will allow coordinated program evaluation and annual congressional review.

The amendment contains another important provision. It makes funds available for weatherizing HUD-assisted housing, including section 202 units for the elderly. Priority attention would be given to housing projects experiencing financial difficulty because of high energy costs.

Finally, the amendment encourages the participation of older workers in the national weatherization effort by permitting participants in the Older American Community Service Employment Act to be used, in addition to CETA workers, to weatherize the homes of low-income persons. Some 37,400 low-income individuals age 55 and above are employed under the senior community service employment program. Many are already engaged in a wide range of weatherization activities, including roof and wall repair, window and door calking, and wall and attic insulation.

Experience has shown that these individuals are conscientious and hard working. They enjoy a natural empathy with elderly homeowners receiving insulation services.

My amendment does not accord these older workers any priority in the national weatherization effort. It merely gives them the opportunity to be included. Identifying them should not pose any difficulties because this program, like CETA, is administered by the Labor Department. Utilizing these older workers will increase the labor pool available for the FEA and CSA weatherization programs.

I urge my colleagues to enact this amendment.

Mr. President, the purpose of this amendment, which has been cleared, I understand, with the staff assisting the distinguished Senator, is simply to accomplish those three objectives, all of which have to do with the weatherization program, all of which I have discussed.

I understand that these three objectives are acceptable to the manager of the bill. The staff has reviewed the wording of the amendment, and there is no objection to it. Therefore, I hope the Senate can speedily adopt it.

Mr. JOHNSTON. Mr. President, we think this is an excellent amendment. The weatherization program has grown in a very coordinated fashion and the uniform standards which this amendment provides for would help very much to coordinate the FEA and the CSA in their administration of these programs.

It will also provide for a weatherization study which will generate very useful information to assist in the congressional oversight of these programs.

Weatherization for low-income people and adding the elderly, as this amendment does, is a very significant step, because of all groups in the country who can both save energy and need help on their utility bills, the elderly and the poor are at the head of the list.

This amendment would help not only extend the program, but help coordinate it in the two agencies that provide the delivery of the weatherization program to the elderly and to the poor.

So we accept the amendment with enthusiasm. It has been cleared with the minority and I understand it is an express approval, although I do not ordinarily speak for them.

Mr. CULVER. Mr. President, I am pleased to support the amendment of my distinguished colleague from Idaho, Mr. CHURCH. Few Federal programs yield benefits as broad as these weatherization grants for low-income families, and this amendment would improve the administration and availability of these home insulation grants.

As I pointed out in an April statement for Senator CHURCH's Aging Committee hearings on high utility costs, the grant program for winterizing the homes of the

poor and elderly serves three worthy purposes:

(1) Conserving energy for home heating by 35 percent and more, thereby reducing our dependence on foreign oil;

(2) Creating tens of thousands of productive job opportunities; and

(3) Helping the elderly and poor in a project they could not otherwise undertake, and reducing their utility bills for years to come.

The amendment now before us would accomplish several needed changes in today's Federal Energy Administration grant program for low-income homeowners. Most importantly, it would increase the eligibility guideline from 100 percent to 125 percent of the official poverty level. This would qualify many near-poor homeowners, including tens of thousands of elderly who are living on their Social Security income just above the poverty level. And this change would eliminate a major discrepancy between the new FEA weatherization grant program and the older companion Community Services Administration weatherization program. The CSA eligibility level has long been at 125 percent of the poverty level. Furthermore, in many States across the Nation, when the FEA funds begin to be channeled to the Governors' offices they will be directed to the local Community Action Agencies which already have an existing network of operations for the CSA winterization moneys. It would certainly ease administration and availability of these complementary weatherization funds if the eligibility guidelines and grant limits were uniform.

The amendment also includes other important improvements in present law to insure a sensible and adequate administration of the home insulation effort. It would mandate a joint study and report to the Congress by the FEA Administrator's successor and the CSA Director on the progress, activities, and adequacy of the weatherization grant program. It also takes steps to insure that a sufficient labor force is available for home insulation through the Labor Department's CETA program. Finally, the amendment provides Housing and Urban Development funds for energy improvements in public housing, particularly section 202 low-income, multifamily dwelling units. These additional changes seem to me to be well-conceived, sensible measures to enhance energy conservation in the homes of the poor and near poor throughout our Nation.

I cannot emphasize enough the value these CSA and FEA home winterization grant programs have in terms of helping the poor and elderly and conserving energy. For as little cost as $180 per home—the CSA weatherization average—heating fuel consumption can be cut by at least one-third. Mindful of the fact that the majority of the aged own homes—most of which are over 30 years old and suffer from disrepair and inadequate insulation—we cannot underestimate the savings in heating fuel and their utility bills. And in light of their lower incomes and poorer health, these elderly people are particularly deserving. As a Senator representing Iowa—a State which has the highest proportion of elderly citizens—I am proud to say that nearly 10,000 Iowa homes have been weatherized by the CSA; and I am hopeful that with these simple changes and full funding, that figure can be doubled, tripled, and even quadrupled in the coming years.

Mr. DOMENICI. Mr. President, I am pleased to join with the distinguished chairman of the Special Committee on Aging (Mr. CHURCH) in supporting this vital amendment. As the ranking minority member of the Special Committee on Aging, I have become increasingly concerned about the adverse impact rising energy costs are having on older Americans.

Early this year I urged the Committee on Aging to undertake a series of hearings designed to focus attention on all aspects of this problem. The four hearings left little doubt in my mind that the low- and middle-income elderly individuals—most of whom are living on a fixed income—will have an increasingly difficult time making ends meet in the face of steadily rising energy costs. Our hearings also indicated that a high percentage of older persons own their own homes, but they lack the resources and the access to credit needed to maintain, modernize, and weatherize these dwellings. As a result, a great deal of energy is wasted—at a high cost they cannot afford—in a futile effort to maintain a basic level of physical comfort.

During the course of our hearings I was personally impressed by the ongoing weatherization program which is administered by the Community Services Administration. We received testimony from a number of senior witnesses who told us how their heating costs were dramatically reduced by federally supported weatherization projects.

On July 26, 1977, Senator BROOKE and I wrote to Senators JACKSON, HANSEN, JOHNSTON, and WEICKER urging them to take the necessary steps to extend and expand this program. I ask unanimous consent, Mr. President, that the text of this letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SPECIAL COMMITTEE ON AGING,
Washington, D.C., July 26, 1977.

Hon. HENRY M. JACKSON,
Chairman, Energy and National Resources Committee, Washington, D.C.

DEAR MR. CHAIRMAN: As your committee begins its work on the residential energy conservation provisions of the National Energy Act, we would like to make you aware of some particular concerns we have as members of the Special Committee on Aging. Our Committee has viewed with favor the ongoing weatherization program administered by the Community Services Administration. Through this program, many older American homeowners have received substantial and much needed weatherization assistance and the program has proved to be effective in finding those households with the greatest need and serving them promptly.

The Administration's attempt to cease funding for this program and instead channel all funding through FEA (including those funds which will go to Community Action Agencies) ignores the broad experience CSA has acquired. This Committee concurs with the decision of the House and Senate Appropriations Committees to divide weatherization funds for FY 78 between the FEA and CSA efforts.

We urge the Energy and National Resources Committee to consider legislation and/or Committee report language, indicating to the Administration that the Congress believes that the portion of weatherization funds which will be channelled through Community Action Agencies should continue to be administered through CSA. We believe FEA should support the program in all areas not covered by CAP agencies. We believe that such an administrative arrangement will assure uninterrupted and effective delivery of services to low income older Americans.

We would also like to express our support for the recommendations of the Senate and House Banking Committees that the guidelines and eligibility requirements of the CSA, FEA and Farmers Home Administration weatherization programs be made as uniform as possible. We believe that report language should also stress the need for inter-agency coordination and cooperation. In addition, efforts should be made to strengthen the involvement of the various CETA Programs (including its youth program) in weatherization projects.

Such changes will afford both flexibility and uniformity to these new programs which will help us to provide much needed weatherization services to older persons in a timely and effective manner.

Sincerely,

EDWARD W. BROOKE,
Ranking Minority Member, Committee on Banking, Housing, and Urban Affairs.

PETE V. DOMENICI,
Ranking Minority Member, Special Committee on Aging.

Mr. DOMENICI. Mr. President, I would note that this amendment closely parallels the language in the House bill and its adoption was recommended to us by the Senate Committee on Banking, Housing, and Urban Affairs. If enacted, this amendment would restructure the FEA weatherization program to make it more like the present CSA program. It would continue its focus on helping the poor and near poor meet their basic energy needs within the constraints of their limited income. In addition, this amendment will see to it that the various weatherization programs have adequate manpower by tapping the CETA and title IX Older Americans Community Service Employment programs for public service workers. The amendment also provides for a comprehensive 1-year interagency study of all federally sponsored weatherization activities. I hope this study will help us to expand and reshape our weatherization efforts in the future. The last provision in our amendment would authorize the Department of Housing and Urban Development to improve the energy efficiency of existing low income public housing units.

Mr. President, I believe the enactment of this amendment would help low income individuals and families to better meet the rigors of the energy crisis. I would note once again in closing, Mr. President, that the thrust of this amendment reflects the findings of the Special Committee on Aging and I urge my colleagues to give prompt approval to this proposal.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Idaho.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. JOHNSTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HANSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, we take under consideration today the conservation portion of the proposed National Energy Act. I agree with many of my colleagues that conservation should be considered as an important building block in such an energy plan. However, we must not risk the disillusionment of the American people by suggesting that conservation, standing alone, can solve our current plight. Conservation legislation without parallel congressional efforts to address the problem of declining oil and gas production will prove to be no solution at all, and our reliance upon imported oil will continue to increase. In sum, our conservation laws are an important part of, but certainly not the keystone of our overall energy policy.

Based upon this clear fact, I must question whether several of the provisions of S. 2057, and certain proposed amendments thereto, are reasonable—or even necessary. Specifically, I question whether any heavy-handed, Federal mandates in the area of conservation programs can be justified.

History has repeatedly shown that the American people are willing and able to sacrifice and to pull together in times of national need. I know that that same sense of national sacrifice and commitment will continue to govern our citizens' approach to conserving fuel. For this reason I strongly oppose in committee any amendments which could rob the American people of their initiative to voluntarily contribute their efforts toward conservation.

Fortunately, the committee rejected attempts to set mandatory home insulation and weatherization standards. Any such Federal intrusion into the private homes of the American people—through mandated conservation requirements, policed by Federal inspectors, and sanctioned by the threat of the loss of Federal mortgage loan guarantees—is an affront to our population. I urge my colleagues to join me in opposing any such amendments offered on the floor of the Senate.

Unfortunately, there are two other similarly repugnant provisions which were successfully added to S. 2057 in committee. The first is found in title II and mandates minimum efficiency standards for virtually all major home appliances ranging from hot water heaters to television sets. Such a law, if enacted, would set aside the voluntary efficiency program which was prescribed in the Energy Policy and Conservation Act of 1975—less than 2 months after the voluntary efficiency targets established by that act had been promulgated by FEA. Witnesses for the appliance industry testified before the Energy Committee that they wholeheartedly endorsed the concept of Federal standards, and expressed their commitment to voluntarily achieve those standards. And yet, S. 2057 would kill that voluntary program before it has been fairly tested.

The second mandatory provision which I oppose is that found in title IV and which sets minimum mileage standards for all automobiles produced or sold in the United States after the 1979 model year. Again, such a requirement would disregard the successful efforts of the automobile industry in achieving the average, fleetwide efficiency standards required by law in 1975, and which initially come into effect in this 1978 model year. Such a requirement would hamstring the flexibility of the auto industry in its efforts to meet the varied transportation needs of the country while at the same time meeting or exceeding national fleet fuel standards. Furthermore, this provision, if coupled with the proposed gas guzzler tax, represents regulatory "overkill" of the one industry which has convincingly demonstrated a firm commitment to doing its share to reduce national fuel consumption.

Mr. President, I urge my colleagues to give long and careful thought to the prudence of burdening our citizenry and our industries with mandated Federal conservation requirements when there is no evidence of any reluctance to voluntarily achieve the same results. In my judgment, we must not allow our zeal to address the energy crisis to stampede the Senate into unneeded and unjustified legislation.

Mr. President, I yield the floor.

Mr. RANDOLPH. Mr. President, I believe that this measure is an important cornerstone in the structure of an energy program that we hope will be helpful to the people of the United States, especially in view of the disastrous occurrences which have taken place in the past few years. I especially focus on the embargo of Mideast oil in 1973 and 1974.

I feel that as we think of conservation as an instrumentality for solving our energy problems, we must recognize the very real and pressing need to produce fuels in the United States of America. Oil, gas, coal, and the processing of these, often through synthetic fuel programs, are essential. But conservation of all fuels will be the ultimate solution to our energy problems. We must increase domestic supplies and reduce our dependence on foreign supplies.

In the State of West Virginia, the man who goes into the mine to produce the coal which is necessary to the mobility of America, to the energizing of America—the coal miner—is driving 50 or 60 miles a day from his home to the mine and then to his family after the shift on which he has been employed. It is very important that we think of not having the cost per gallon of gasoline so excessive that the miner—perhaps other miners riding with him in his private vehicle—not be given the opportunty to go to the mine. These people are needed to produce the energy supplies that the Nation must have in this year and in the years ahead.

I call to the attention of the managers of the bill and to our colleagues in the Senate that we are spending $12.5 billion to stockpile petroleum, petroleum that is coming from abroad, petroleum to take care of America, at least in part, in time of possible further blockade. That storage is understandable, but it costs the American taxpayers $12.5 billion.

For a like sum of money, we could be developing in our country a synthetic liquid fuels program that would supply an equivalent of that which we are storing. At that funding rate, the synthetic fuels program could continue on a 20-year basis. So when we spend $12.5 billion to store petroleum against a possible embargo, let us realize that in the United States we need programs of production as well as the necessary programs of conservation—both mandatory conservation and voluntary conservation.

My colleagues will recall that in the passage by Congress of the national 55 miles per hour speed limit law, it was our intention that this speed limit be observed and enforced by the States and political subdivisions. If the speed limit were universally observed, we would conserve approximately 160,000 to 200,000 barrels of gasoline every 24 hours. The problem is that the American people have not been observing, nor have the States and their political subdivisions been enforcing, the national 55 miles per hour speed law.

Now let us see what has been happening. We have tried very diligently—those of us associated with this form of conservation—to emphasize that there are provisions within our law to force compliance with this important national statute. In our Federal-Aid Highway Act, we provided that if a State was not enforcing the national speed limit law of 55 miles per hour, Federal funds for the construction of highways should be withheld from that State. No money has been withheld from any of the States. I am not saying that it should have been withheld. I am only saying that there is a lack of observance and a lack of enforcement of that national speed limit.

We must realize that in a conservation program we have to determine some way to have the American people realize the seriousness of the energy problem and necessity to cooperate with their States and political subdivisions in bringing about measures to conserve fuel in the United States.

I bring this up as one illustration of the action of Congress and the failure of the administration to follow through on warning the States but in actually withholding the Federal funds to the States which are not doing the job of enforcement.

I note with approval that President Carter in recent days has indicated to the Secretary of Transportation, Mr. Brock Adams, that he wants enforcement of this law. He expects Secretary Adams to look carefully at those States where there seem to be the greatest violations of the national 55-mile-per-hour speed limit.

Mr. President, during the 94th Congress, I introduced a resolution calling for an energy conservation crusade. This

measure was agreed to by a unanimous vote. It was the sense of the Senate, and the resolution listed 20 to 30 ways in which the people of the United States could conserve energy—in housing, insulation, all sorts of programs of that type. It was forwarded to the President of the United States as a sense-of-the-Senate resolution, and we hoped that the President, Mr. Ford, would look with favor upon what the Senate was doing and would tell the American people of the necessity for an across-the-board conservation program.

I regret to say that even with what we did, the sense of the Senate resolution was a failure, a failure to have the backing of the administration and a failure to follow through in many other aspects of legislation that would have brought us to grips with this problem. For this reason, I introduced in the 95th Congress a second resolution calling for the energy conservation crusade.

In this measure which is now brought before the Senate, once again we are attempting to make an attack on the core of the problem. We are not making, as I understand it, feeble attempts to come to grips on the fringes of this problem. But in the House and now in the Senate, we are in the process of making a determined frontal attack on those persons and institutions who have combined to thwart the efforts of an energy production program as well as an energy conservation program in the United States of America.

I think there is now a change in American thought on this matter. I believe they are not only aware of the energy crisis—it is not a crisis that is around the corner and going to come to us, but it is in the kitchen—but recognize the critical nature of the problem.

There is this recurring problem in America of the need, as I see it, to produce within our country energy supplies rather than to be holding to, let us say, the very fragile threads of foreign supplies which, of course, are not fragile in their amounts but uncertain in continuance. At the present time we are importing into the United States about 50 to 51 percent of all the petroleum that is being used in this country.

It is not easy to divide the subject matter between production and conservation, but it is necessary, as I have indicated, to do the job on both fronts. They certainly combine in this frontal attack which is necessary for both the Congress and the administration to participate in.

I ask unanimous consent to insert the remarks I made at the time of the introduction in the Senate of Senate Joint Resolution 13 on January 24, 1977, calling for an energy conservation crusade.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

By Mr. RANDOLPH (for himself, Mr. ABOUREZK, Mr. ALLEN, Mr. BURDICK, Mr. HARRY F. BYRD, JR., Mr. CASE, Mr. CANNON, Mr. CLARK, Mr. GRAVEL, Mr. HASKELL, Mr. HATFIELD, Mr. HUDDLESTON, Mr. HUMPHREY, Mr. JACKSON, Mr. JOHNSTON, Mr. LAXALT, Mr. MAGNUSON, Mr. MATHIAS, Mr. MCCLURE, Mr. MCINTYRE, Mr. MORGAN, Mr. MUSKIE, Mr. PEARSON, Mr. PELL, Mr. RIBICOFF, Mr. STONE, Mr. THURMOND, and Mr. WILLIAMS):

Senate Joint Resolution 13. A joint resolution designating "Energy Conservation Month"; to the Committee on Interior and Insular Affairs.

ENERGY CONSERVATION

Mr. RANDOLPH. Mr. President, for myself and 27 cosponsors, I introduce a joint resolution of importance, not only to the Members of the Senate, but to the American people as a whole.

Besides this Senator there are 20 Democrats and 7 Republicans who are cosponsors of this resolution in support of an Energy Conservation Crusade and Energy Conservation Month.

As the first energy action of the 94th Congress, on February 5, 1975, this body approved a similar resolution introduced by this Senator and cosponsored by 67 Members of this body.

Mr President, the joint resolution I introduce today is cosponsored by 27 Members of this body in recognition of the importance of energy conservation as a fundamental element of a national energy policy.

Speaking about natural gas shortages, President Carter declared last Friday that, "without public—energy—conservation, there may not be enough energy to allocate." The Chief Executive instructed Dr. Schlesinger to work with congressional leaders to develop emergency legislation to augment or legal means to distribute equitably our available supplies of natural gas.

Recognizing the importance of energy conservation the President also directed officials of all Government facilities to turn their thermostats down to 65 degrees in the daytime and lower at night. He also called on all Americans to do the same.

The resolution I introduce today endorses this proposal by President Carter by calling for an Energy Conservation Crusade. The measure would declare as Energy Conservation Month the period from February 16 to March 15, 1977, to reemphasize our national commitment to eliminate wasteful uses of energy.

With effective national leadership by Federal, State, and local governments and by all segments of business and industry, the American people can achieve an estimated energy savings equivalent to 5 million barrels of oil per day.

However, achievement of any substantial savings through energy conservation will involve millions of individual decisions by American consumers and, in particular, by the business community. A major national commitment will be required by American business.

I hope that this Energy Conseration Crusade resolution will receive prompt consideration and vigorous implementation.

Mr. President, I ask unanimous consent to have printed in the RECORD, at this point in my remarks the names of the Senators who are cosponsors of this resolution.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

"Mr. Abourezk, Mr. Allen, Mr. Burdick, Mr. Byrd of Virginia, Mr. Case, Mr. Cannon, Mr. Clark, Mr. Gravel, Mr. Haskell, Mr. Hatfield, Mr. Huddleston, Mr. Humphrey.

"Mr. Jackson, Mr. Johnston, Mr. Laxalt, Mr. Magnuson, Mr. Mathias, Mr. McClure, Mr. McIntyre, Mr. Morgan, Mr. Muskie, Mr. Pearson, Mr. Pell, Mr. Ribicoff, Mr. Stone, Mr. Thurmond, Mr. Williams."

Mr. RANDOLPH. Mr. President, this sponsorship indicates that there is no partisanship whatever in this approach. We are not pointing the finger at anyone. Frankly, we are pointing our fingers at ourselves.

We all realize that an Energy Conservation Crusade with the Energy Conservation Month, will help us realize that we are challenged in a voluntary way to make this effort. Thus Americans can be made more aware that the problems related to the importation of oil from abroad can in a large measure be solved, by beginning our independence here, with the disciplines that we can build into our daily lives.

The resolution is in no way a gesture. If the President of the United States will proclaim this Energy Conservation Crusade, if he will designate the month indicated as Energy Conservation Month, and will call upon the American people, through his leadership, then we, through our cooperation, can do much in our hour of need.

Mr. President, I ask unanimous consent that the resolution be reprinted in the RECORD.

S.J. RES. 13

Resolved by the Senate and the House of Representatives of the United States of America in Congress assembled, That it is hereby declared to be the sense of the Congress that wasteful energy consumption in the United States must be eliminated at this time when our country is experiencing unprecedented economic and energy problems and is faced with severe shortages of energy, and requests the President to issue a national proclamation calling for a National Energy Conservation Crusade and declaring the period from February 16 to March 15, 1977, as "Energy Conservation Month." In the observation of Energy Conservation Month—

The President is called on to publicize information for government, industry, and consumer use on appropriate energy conservation measures and to direct the Federal establishment to institute all available actions to reduce energy consumption without reducing the level of essential services being provided to the American people;

Governors, county executives, mayors, and other responsible officials are called on to examine the activities of State and local government and wherever possible institute comparable measures to those of the Federal government to promote energy conservation;

Business and industry are requested to examine their energy consumption practices and institute measures to eliminate unnecessary energy consumption and improve efficiency of use of available energy supplies, to curtail ornamental lighting and nonessential lighted advertising, to adjust business hours to reduce energy consumption, and to modify building operating and maintenance practices to promote energy conservation; and

The American people are called on to take the initiative in conserving available energy supplies by observing the 55 mile per hour speed limit on highways, by reducing the use of energy to heat and cool homes, offices, schools, and commercial establishments, by increasing the utilization of mass transportation facilities, carpools, compact cars, and stick-shift motor vehicles, and by installing insulation in their homes.

SEC. 2. The President is requested to report to Congress by March 31, 1977, on the steps taken to promote energy conservation and their results and on any recommendations for legislation he believes necessary to implement a continuing program of energy conservation.

SEC. 3. The President is requested to report monthly to the American people and the Congress on the status of energy conservation initiatives and their effectiveness, domestic energy supplies, domestic energy

shortages on the economy of and employment in the United States.

Mr. RANDOLPH. Mr. President, from time to time I am sure Members within this body will address themselves to the specifics of the amendments that are before us. I am appreciative that at the very beginning of the consideration of this bill I have had the opportunity not to say just that this is something that should have been done long ago. It is, of course, something that comes so often after the fact, and America tries to catch up. But America faces this problem, and I hope there will be the enlightenment, the courage, and the understanding within the Senate as well as the other body to bring these packages together.

I commend our majority leader, Senator ROBERT C. BYRD, as he attempts to expedite these programs in the Senate—not to fail to discuss them thoroughly, each and every part of the package, but to separate them in an attempt so that the Senate itself will be able to go to conference with the House. We must begin to bring to fruition the energy program of this Congress, of this administration, and, hopefully, of the American people.

Mr. ROBERT C. BYRD. Mr. President, I thank my distinguished senior colleague for his kind comments.

The PRESIDING OFFICER. The bill is open to further amendment.

UP AMENDMENT NO. 792

Mr. JOHNSTON. Mr. President, on behalf of myself and my distinguished colleague from Colorado (Mr. HASKELL) I have an amendment which I send to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Louisiana (Mr. JOHNSTON) for himself and Mr. HASKELL proposes an unprinted amendment No. 792.

Mr. JOHNSTON. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 94, line 19, insert the following new section:

PART D—USE OF RECOVERED MATERIALS

AMENDMENT TO PART D OF TITLE III OF THE ENERGY POLICY AND CONSERVATION ACT

SEC. 423. (a) FINDINGS.—The Congress finds that—

(1) significant amounts of industrial energy and other scarce natural resources are conserved in certain major energy-consuming industries where recovered materials are utilized in their manufacturing operations;

(2) substantial additional volumes of industrial energy and other scarce natural resources will be conserved in future years if such major energy-consuming industries increase to the maximum feasible extent utilization of recovered materials in their manufacturing operations;

(3) millions of tons of recoverable materials which could be used by such industries are needlessly wasted and buried each year at great cost to State and local governments, while technology and methods exist whereby those materials could readily be made available for utilization; and

(4) the recovery and utilization of such recovered materials can substantially reduce the dependence of the United States on foreign natural resources and reduce the growing deficit in its balance of payments.

(b) PURPOSES.—The purposes of this section are to conserve valuable energy and scarce natural resources, promote the national security, and protect the environment by—

(1) directing that targets for increased industrial utilization of recovered materials be established for certain major energy-consuming industries;

(2) creating procedures whereby such industries may cooperate with the Federal Government in the establishment and achievement of such targets; and

(3) providing incentives for increased industrial utilization of energy-saving recovered materials in such major energy-consuming industries.

(c) TARGETS FOR USE OF RECOVERED MATERIALS.—Part D of title III of the Energy Policy and Conservation Act is amended by inserting the following new section after section 374:

"TARGETS FOR USE OF RECOVERED MATERIALS

"SEC. 374A. (a) For purposes of this section, the term 'energy-saving recovered materials' means aluminum, copper, lead, zinc, iron, steel, paper and allied paper products, textiles, and rubber, recovered from solid waste, as defined in the Solid Waste Disposal Act.

"(b) Within one year after the date of enactment of this section, the Administrator shall set targets for increased utilization of energy-saving recovered materials for each of the following industries: The metals and metal products industries, the paper and allied products industries, the textile mill products industry, and the rubber industry. Such targets—

"(1) shall be based on the best available information,

"(2) shall be established at levels which represent the maximum feasible increase in utilization of energy-saving recovered materials each such industry can achieve progessively by January 1, 1987, and

"(3) shall be published in the Federal Register, together with a statement of the basis and justification for such targets.

"(c) In establishing targets under subsection (b), the Administrator shall consult with the Administrator of the Environmental Protection Agency and with each of the major industries subject to this section, and shall consider—

"(1) the technological and economic ability of each such industry progressively to increase its utilization of energy-saving recovered materials by January 1, 1987, and

"(2) all actions taken or which before such date could be taken by each such industry, or by Federal, State, or local governments to increase that industry's utilization of energy-saving recovered materials.

"(d) Any target established under subsection (b) may be modified if the Administrator—

"(1) determines that such target cannot reasonably be attained, or that it should require greater use of energy-saving recovered materials, and

"(2) publishes such determination in the Federal Register, together with a basis and justification for such modification.

"(e) Within each of the industries subject to this section, the Administrator shall notify each corporation which is a major energy consumer (within the meaning of section 373) of the requirements of this section. Not later than January 1, 1978, the chief executive officer of each such corporation (or individual designated by such officer) shall include in his report to the Administrator under section 375, or if section 376(g) applies, prepare and transmit a report which includes a statement of the volume of energy-saving recovered materials that such corporation is using in each of its manufacturing operations located in the United States and what plans, if any, the corporation has to increase the utilization of such materials in those operations in each of the next ten years. Not later than January 1, 1979, and annually thereafter, each such corporation shall include in such report a statement of the progress it has made to increase its utilization of energy-saving recovered materials to reach targets established under this section by the Administrator for its industry. Such reports shall contain such information as the Administrator determines is necessary to measure progress toward meeting the industry targets established under this section.

"(f) The Administrator shall include in his annual report under section 375(c) a report on the industrial energy and natural resource conservation and recovery program established under this section. Each such report shall include—

"(1) a summary of the progress made toward the achievement of targets set by the Administrator under this section; and

"(2) a summary of the progress made toward meeting such targets since the date of publication of the previous report, if any.".

(d) TECHNICAL AMENDMENTS.—Section 376 of such Act is amended by—

(1) inserting "or 374A" after "section 372" in subsection (b), and

(2) inserting "or any target under section 374A" after "374" in subsections (c) and (f).

Mr. HASKELL. I am proposing today an amendment to S. 2057 which deals with the use of recycled materials. This amendment will result in the creation of voluntary recycling targets for industry to encourage recycling or resource recovery of energy intensive materials. I would like to emphasize that these recycling targets are completely voluntary and are designed solely to serve as yardsticks to measure progress in achieving these goals. This amendment is cosponsored by Mr. JOHNSTON and is supported by the administration. In addition, this is the same measure which passed the House and is included in H.R. 8444.

We believe that this amendment will significantly enhance the effectiveness of President Carter's overall energy program. The encouragement of recycling and resource recovery in American industry is one of the most direct and efficient ways for the United States to cope with the energy crisis.

The benefits of current recycling efforts are significant. In 1976 three of the major energy consuming industries in the United States—metals, paper, and rubber—conserved the equivalent of 151 million barrels of oil by recycling materials in their industrial operations in place of utilizing new natural resources.

Despite those savings we are just at the threshold of the possibilities of recycling. Indeed, at the end of World War II, the paper industry's recycling rate was roughly twice what it is today. With relatively minor Federal incentives the metals, paper, and rubber industries would double their current recycling rate in the next decade.

This legislation amends the Energy Policy and Conservation Act and directs the administrators of FEA and EPA to consult with the major energy-consuming industries and establish voluntary targets for progressive increases in recycling through 1987. In addition, it requires that major energy consuming corporations in each such industries report to FEA each year the progress made in reaching their targets.

Successful implementation of this program offers the following potentials:

First, it will lead to the conservation of significant volumes of industrial energy.

Second, it will reduce our Nation's growing dependence on foreign sources of supply of both energy and other natural resources.

Third, it will alleviate our Nation's growing solid waste problems, and reduce solid waste disposal costs for cities and State, and

Fourth, it will improve our rapidly deteriorating balance of payments.

Mr. JOHNSTON. Mr. President, this amendment is brought up at this time in hopes that after explanation it will be accepted. If it is not, then I would want to defer it until Senator HASKELL could be heard on it.

It is a recycling amendment, Mr. President, that is very narrow in its scope, but it is an important first step, I believe, toward realizing for this country the great possibilities in recycling.

What the amendment does is, it results in the creation of voluntary recycling targets for industry to encourage recycling or resource recovery of energy-intensive materials. In addition, there are mandatory reporting requirements for each corporation which is designated as a major energy consumer. These are in four industries: Metals and metal products, paper and allied products, textile mill products, and rubber industries.

Mr. President, we are not doing the job in recycling that we ought to be doing, and yet it offers such great possibilities. During 1976 the aluminum, copper, lead, zinc, steel, paper, and rubber industries alone conserved nearly 285 billion kilowatt-hours or the equivalent of 151 million barrels of oil by using recycled material in their industrial operations in place of the virgin resource counterparts.

Unfortunately, however, American industry is literally just scratching the surface on recycling. At the end of World War II, for example, our national paper recycling rate was roughly twice what it is today. The aluminum industry projects that with relatively minor Federal incentives its current recycling rate can be doubled in the next decade.

Now, why then come in with just voluntary targets? Well, frankly, the possibilities in recycling are so vast, but like so much of Federal legislation, we do not know precisely how to require them to recycle. So what we want to do by this amendment, so modest in its scope, is simply to ask industries themselves to set their own target.

There is nothing mandatory at all about the targets, but, in other words, to require them to come in and make their own study: How many beer cans ought to be recycled, how much paper, how much steel, how much zinc, how much of these other materials ought to be recycled, set their own target, and then require that they report if they are in an energy-intensive industry, and that is all it requires.

I think it is a modest first step, but the possibilities in recycling are so great that I think we must at least take this first step.

I frankly do not see any opposition or how there would be opposition to this amendment. I think there are those who oppose it, but I think, frankly, their opposition is, "Well, voluntary targets may lead to mandatory targets."

Well, if that is so, if it does lead to mandatory targets, it will be only because Congress, after studying the results of the voluntary targets and after studying the possibilities in the field, feels that the possibilities are great, and that they are not doing what they ought to do. But that is a question that would be put off for another day and another time and in another Congress, and after we know a great deal more about it.

For the time being the setting of voluntary targets with a simple reporting requirement I think is a modest, proper, and necessary step to take.

Mr. RANDOLPH. Mr. President, the amendment of the able Senator from Louisiana (Mr. JOHNSTON) addresses one of our country's most serious problems. I believe we have achieved a new awareness that we must carefully conserve and reuse our material resources. In addition, we are constantly searching for new and inventive ways to conserve energy and to produce energy from readily available domestic fuel sources.

The Resource Conservation and Recovery Act of 1976 for the first time established a major commitment of the Federal Government to altering the national attitude from use and discard to one of recovery and reuse. This legislation, which I sponsored, provides vital assistance to States and communities to help them develop and implement workable solid waste programs. Through its programs we will work to resolve some of our environmental, energy, and materials problems.

The amendment of the Senator from Louisiana (Mr. JOHNSTON) is consistent with the aims of the Resource Conservation and Recovery Act. The sponsor of the amendment properly perceives that we can more effectively act in this area if we have full knowledge about the resources available to us and the means for recovering both energy and materials. His amendment would help provide important information and thereby further the need to recover and recycle. I commend him for his initiative and I am glad to be a cosponsor of the amendment.

Mr. HANSEN. Mr. President, will the distinguished floor manager of the bill yield for a question?

Mr. JOHNSTON. Certainly.

Mr. HANSEN. What I hear impresses me as being a reasonable and yet a worthwhile effort that should and could be made. I have just one question. Having in mind the burden that paperwork imposes upon industry and the added costs that result oftentimes from what I think are overly detailed and extensive reports, I am persuaded to ask would it be the sponsor's idea to keep the reporting down to simple delivery of the facts, the essentials that would be important, and yet not to make it necessary to employ any significant extra amount of help in order to fulfill that Federal requirement if indeed this amendment does become law?

Mr. JOHNSTON. The Senator is precisely correct. As a matter of fact, I am advised that this information would be filed on forms already being filed so that there would be some additional facts put on the same form, so in terms of additional paperwork and employees it should not take any of that.

Mr. HANSEN. May I say then to my friend from Louisiana that from what I have heard I see much to commend the amendment, and I know at this moment of no reason why it should not be adopted.

Mr. JOHNSTON. I thank the distinguished Senator from Wyoming.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

ADDITIONAL COSPONSORS

Mr. JOHNSTON. Mr. President, if the Record does not already show it, I ask unanimous consent that the name of the distinguished Senator from West Virginia (Mr. RANDOLPH) be included as a coauthor on the recycling amendment (No. UP 792). Senator RANDOLPH was one of the original movers in the field of recycling.

The PRESIDING OFFICER. Without objection, his name will be shown in the RECORD as a coauthor of the amendment.

UP AMENDMENT NO. 793

Mr. HEINZ. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Pennsylvania (Mr. HEINZ), for himself and Mr. HART and Mr. CRANSTON proposes unprinted amendment No. 793.

Mr. HEINZ. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill, add the following:

BICYCLE STUDY

SEC. 8. (a) The Congress recognizes that bicycles are the most efficient means of transportation, represent a viable commuting alternative to many people, offer mobility at speeds as fast as that of cars in urban areas, provide health benefits through daily exercise, reduce noise and air pollution, are relatively inexpensive, and deserve consideration in a comprehensive national energy plan.

(b) Not more than one year after the date of enactment of this Act, the Secretary of Transportation shall complete a study of the energy conservation potential of bicycle transportation, determine institutional, le-

gal, physical, and personal obstacles to increased bicycle use, establish a target for bicycle use in commuting, and develop a comprehensive program to meet these goals. In developing the program, consideration should be given to educational programs, Federal demonstrations, planning grants, and construction grants. The Secretary of Transportation shall submit a report to the President and to the Congress containing the results of such a study.

Mr. HEINZ. Mr. President, the purpose of this amendment is to emphasize the heavy energy burden modern forms of transportation placed on us and to provide for an investigation of the feasibility of a more basic—and healthier—mode of transportation—the bicycle.

We are all well aware of the size of the transportation sector in energy terms. It amounts to 25 percent of our energy budget. More important for the short term, 95 percent of energy used in transportation comes from petroleum, the very commodity we are most concerned about conserving. And the situation is deteriorating. By 1985 it is estimated that 58 percent of our oil will be consumed by the transportation sector. Much of that, of course, will go to the automobile, since our use of auto transportation has been increasing despite the energy crisis and the tremendous rise in gasoline prices in the past 4 years.

Much of this gasoline consumption has been in urban areas over short distances. The periodical, Bicycling, reported, for example, that private automobiles in urban service used 35 billion gallons of gasoline in 1970; 60 percent of those trips were 2½ miles or less. Federal Highway Administration figures indicate that 43 percent of urban work trips by autos are 4 miles or less.

This kind of travel is exceptionally wasteful—short trips, constant accelerating and braking, idling in traffic all combine to reduce mileage, increase gasoline consumption, and, not incidentally, increase commuter frustration.

Miraculously, there is an answer to all this waste and aggravation, an answer which not only saves gas and reduces time wasted commuting, but which improves public health and physical fitness in the process. That answer is bicycles.

I am sure I do not need to recite at any length the virtues of bicycle transportation, as I am confident my colleagues are not unacquainted with the device. Bicycles use no gas, relying on a more fundamental means of power. They take up less space than autos, are more maneuverable, have no parking problems, and very frequently move faster than cars in rush-hour traffic. All in all, they are a significant improvement over the automobile, and a potentially significant energy conservation device.

Nor should we assume that the bicycle is primarily a children's device. A survey in California showed that 23 percent of the bicycle trips surveyed were for shopping, 23 percent for work, 14 percent for school, and 40 percent for recreation. Moreover the percentage of bicycles for sale to adults has been steadily increasing. More and more people are realizing the potential of the bicycle as a serious means of transportation and are beginning to adjust their life styles to take advantage of it. For example, a survey a few years ago of bicycle clubs in the Washington area showed that 43 percent of the members try to commute to their jobs regularly by bicycle, and I suspect that that percentage also is increasing.

On a somewhat lighter note, an increased emphasis on bicycle transportation will also add a certain continental touch to our way of life. Bicycling is a common and accepted mode of travel in Europe, and we could do well to learn from that example. Urban distances are not significantly greater, and, if anything, the topography is more hospitable.

Having delivered this paean to the bicycle, however, let me make clear the limited scope of this amendment. It is simply a study amendment, providing for a 1-year Department of Transportation study of the energy conservation potential of bicycles and of obstacles to increased bicycle transportation. The study will include a plan for increased bicycle use that might involve educational programs, demonstrations, planning or construction grants, none of which could be implemented, of course, without further legislation.

As I have said on other occasions, we have gone beyond the point in our energy conservation battle where simple, easy actions will result in large savings of energy.

Conservation now is essentially an incremental effort—a series of small steps, each of marginal significance when viewed singly, but which taken together have a noticeable impact on energy conservation. To that end we must recognize that no effort is statistically insignificant, and that every effort that saves energy—particularly oil and gas—merits our support. To use an expression appropriate to this amendment, we have to stop soft-pedaling our fight to conserve energy and instead wheel all our resources—including bicycles—into line. I believe it is clear that promotion of bicycle transportation would be a useful energy conserving step and that it merits our analysis and support. This amendment, of course, merely provides the analysis, not the program, but should the study be as positive as I think it will be, you can be sure I and others will be back here next year seeking funding for a bicycle program.

Mr. President, this is a very simple amendment. Its purpose is to create an emphasis and a climate to recognize that the humble bicycle is a very overlooked means of conserving energy. We all drive to work, so many of us. We are so dependent on the automobile, and we use up a great deal of precious petroleum because of that dependence.

That transportation requires some 25 percent of our total energy use each year. In other parts of the world, notably Europe, the bicycle has been accepted as an effective means of transportation for decades. In this country the topography is more hospitable than some of the hilly terrain of Switzerland or Germany or my wife's home country of Portugal, where the bicycle has a great following.

Here in Washington, D.C., I understand that some 43 percent of the commuters have at one time or another tried to bicycle to work.

As a matter of fact, I was one of those individuals. I tried commuting to work from Georgetown and because there are a few fairly difficult and dangerous transitions I gave it up in the interest of public safety—mine.

It is for this reason, Mr. President, that I offer this amendment which is nothing more or less than a study amendment. It directs the Department of Transportation, the Secretary, to make a complete study of the energy conservation potential of bicycle transportation, and a report to the President and to Congress containing the results of the study. A similar provision is in the House bill, and I would hope, Mr. President, that my colleagues would see fit to accept the amendment.

Mr. JOHNSTON. Mr. President, I agree with the comments of my distinguished colleague from Pennsylvania except when he refers to the bicycle as a humble means of transportation. I think the bicycle has come into its own in recent years, with all of the new technological improvements, 10 speeds, the exquisite paint jobs, and the new-found interest in physical training. So I think it is time to elevate the bicycle to its rightful place, and I think this amendment takes that first and important step in having the study done to determine where that place is and how much it should be elevated. We accept the amendment with enthusiasm.

Mr. HEINZ. Would it be fair to say that the distinguished floor manager of the bill feels that it is time to stop soft-pedaling a bicycle?

Mr. JOHNSTON. I think it is time to stop soft-pedaling, and I think it is time for the distinguished Senator from Pennsylvania to resume his bicycling to work in order to set the example for the rest of us here in Washington.

Mr. HEINZ. Mr. President, I am prepared to yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Pennsylvania.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

UP AMENDMENT NO. 794

Mr. RANDOLPH. Mr. President, I send an unprinted amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from West Virginia (Mr. RANDOLPH) proposes unprinted amendment No. 794.

On page 69, line 4, after the word "Administrator," insert the phrase: "in consultation with the Administrator of the General Services Administration."

On page 69, line 10, after the word "Administrator," insert the phrase: "in consultation with the Administrator of the General Services Administration."

Mr. RANDOLPH. Mr. President, in our Committee on Environment and Public Works we have jurisdiction over public buildings and grounds, those owned or leased by the Government of the United States. The bill, as reported, provides for a demonstration program on the uses of solar energy in Federal buildings. This program would be carried out by the Federal Energy Administration. Since most Federal buildings are the responsibility of the General Services Administration, I believe the potential value of the solar demonstration program would be enhanced by the involvement of this agency. GSA has great experience in the construction of public buildings and can contribute significantly to finding ways to adapt solar energy systems to our buildings. For this reason, my amendment would require the Administrator of the Federal Energy Administration to consult with the Administrator of GSA in the development and execution of the solar energy program.

I think it is a reasonable request, and I know there will not be one agency competing with another. They can work together to insure a better result.

Mr. JOHNSTON. Mr. President, the distinguished Senator from West Virginia (Mr. RANDOLPH) has an amendment which improves this bill because the GSA Administrator should be consulted and failure to do so would result in an uncoordinated program and one that would be sure not to be a success.

So we accept it with congratulations to the distinguished Senator from West Virginia.

Mr. RANDOLPH. I thank the manager of the bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from West Virginia.

The amendment was agreed to.

UP AMENDMENT NO. 795

Mr. HASKELL. Mr. President, I send an unprinted amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Colorado (Mr. HASKELL) proposes unprinted amendment No. 795.

Mr. HASKELL. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 33, line 5, after the comma insert "or".

On page 33, line 8, strike out "twenty-five" and insert in lieu thereof "50".

On page 33, strike out lines 9 through 17.

On page 34, line 10, before the semicolon insert "unless the loan is assumed by such other person".

On page 35, between lines 10 and 11, insert the following:

(5) In making loans under this section, the Secretary shall issue and make available to prospective borrowers at the time loan applications are accepted, rules and regulations governing the repayment requirements applicable to such loans.

On page 35, strike out lines 12 through 16, and insert in lieu thereof the following:

(A) the term "qualified solar heating equipment" means any active system (based on mechanically forced energy transfer) or passive system (based on conductive, convective, or radiant energy transfer) or a combination of both systems which utilizes solar energy to provide all or part of the heating requirements of a residential structure (including all the necessary fittings and related installations) and which is certified by the Secretary—

On page 35, line 20, strike out "substantially all" and insert in lieu thereof "more than 40 per centum".

On page 36, line 6, strike out "and".

On page 36, strike out lines 7 through 11 and insert in lieu thereof the following:

(B) the term "qualified solar heating and cooling equipment" means any active system (based on mechanically forced energy transfer) or passive system (baesd on conductive, convective, or radiant energy transfer) or a combination of both systems which utilizes solar energy to provide all or part of the heating and cooling requirements of a residential structure (including all the necessary fittings and related installations) and which is certified by the Secretary—

On page 36, line 15, strike out "substantial".

On page 36, line 21, strike out the period and insert in lieu thereof "; and".

On page 36, between lines 21 and 22, insert the following:

(C) the term "passive system" includes, but is not limited to, window and skylight glazing, thermal floors, walls and roofs, movable insulation panels (in conjunction with glazing), portions of a residential structure which serve as solar furnaces so as to add heat to residences, double pane window insulation, or other components designed to enhance the natural transfer of energy for the purpose of heating or heating and cooling a residence as determined by the Secretary—

On page 37, line 2, before "each type" insert "the cost effectiveness of".

On page 37, between lines 10 and 11, insert the following:

(C) establish by rule within six months after the date of enactment of this Act criteria for determining what portion or percentage of the cost of any passive system will be eligible for loans under this section where the primary or a major purpose of such system is other than solar heating of a residential structure. Such criteria shall be based on—

(i) the extent to which the system will contribute to the heating of a residential structure;

(ii) the most effective use of the funds available for loans under this section in stimulating the widespread use of solar energy;

(iii) any other factors the Secretary deems relevant.

On page 37, line 11, strike out "(C)" and insert in lieu thereof "(D)".

On page 37, line 19, strike out "(D)" and insert in lieu thereof "(E)".

On page 37, line 23, strike out "(E)" and insert in lieu thereof "(F)".

On page 38, line 12, strike out "or of a loan contract entered into under this section".

Mr. HASKELL. The amendment which is now at the desk and in the hands of the clerk, it is my understanding, has been cleared both with the majority and the minority. What it does is make minor and what I consider to be nonsubstantive changes in the solar loan section which was adopted by the committee.

The amendment I have just sent to the desk is cosponsored by my friend and colleague from Colorado (Mr. HART), who provided much of the legislative background for the solar loan program. The amendment clarifies several definitions; and, since the Department of Housing and Urban Development has not yet formulated minimum standards for passive systems, the amendment stipulates that passive systems standards be established within 6 months after passage of the bill.

I believe this probably suffices for an explanation, but, of course, if either the manager of the bill or the distinguished ranking minority member have questions, I will be glad to answer them. My understanding is that the amendment has been accepted.

Mr. JOHNSTON. Mr. President, we agree with the distinguished Senator from Colorado in his statement on this amendment. It does perfect language already in the bill, and I think improves it; and we will accept the amendment.

Mr. HASKELL. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado. Does the Senator from Wyoming seek recognition?

Mr. HANSEN. Mr. President, I endorse the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. HANSEN. Mr. President, I ask unanimous consent that Mike Crisp, of Senator BAKER's staff, may be accorded the privilege of the floor during all consideration and voting on this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 796

Mr. BROOKE. Mr. President, I call up my amendment which is at the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The Senator's amendment is apparently not at the desk.

Mr. BROOKE. Mr. President, I send to the desk an amendment for myself and Mr. ROBERT C. BYRD, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Massachusetts (Mr BROOKE), for himself and Mr. ROBERT C. BYRD, proposes an unprinted amendment numbered 796.

Mr. BROOKE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 23, line 5, insert the following: "(d) TRUTH IN LENDING.—Nothing contained in section 104(4) of the Truth in Lending Act (15 U.S.C. 1603(4)) or the regulations issued pursuant thereto shall be deemed to exempt sales or credit extensions by public utilities under this subpart."

Mr. BROOKE. Mr. President, the Consumer Credit Protection Act, 15 U.S.C. 1601, et seq. Public Law 90–321, as

amended contains seven separate titles establishing minimum Federal protections for consumers—and in some cases businessmen—involved in credit transactions. The separate titles include the Truth in Lending Act with its fair credit billing amendments.

Section 104 of the Truth in Lending Act, 15 U.S.C. 1603, exempts certain transactions under public utility tariffs if the Federal Reserve Board determines that the State regulatory body regulates the charges involved. In the context of traditional utility activities this exemption is sensible since the act's primary purposes—to facilitate comparative shopping for credit and to foster price competition—will not be served. In contrast, extensions of credit under utility programs should not be exempted since there are alternative sources of both the services to be performed and the financing that will be available. Compliance with the Truth in Lending Act will encourage consumer shopping and credit price competition. In addition, the Truth in Lending Act provides a 3-day period during which a consumer may cancel a loan. This provision may be important in home improvement transactions in which a security interest is taken in the principal residence of the consumer.

The Federal Trade Commission does not construe section 104(4) of the Truth in Lending Act to authorize an exemption for extensions of credit by utilities for the purpose of home insulation or retrofitting. Some utilities currently sponsoring programs similar to the utility program required in the bill, however, have failed to comply with applicable consumer credit protection laws. Explicit clarification, therefore, is warranted.

The application of the Fair Credit Billing Act to utility programs which otherwise meet the act's definition of "open end credit" also requires clarification. The Fair Credit Billing Act—15 U.S.C. 1666–1666j, Supp. IV, 1974—provides a mandatory dispute resolution procedure for alleged billing errors appearing on periodic billing statements sent to consumers. Utility billing systems which meet the definition of "open end creditor" should be required to comply with the Fair Credit Billing Act dispute resolution procedures.

The amendment I have offered together with the distinguished majority leader clarifies the applicability of the Truth in Lending Act to extensions of credit by utilities under utility programs and that should be added to section 107. IV states that:

(d) TRUTH IN LENDING.—Nothing contained in Section 104 (4) of the Truth in Lending Act (15 U.S.C. 1603 (4)) or the regulations issued pursuant thereto shall be deemed to exempt sales or credit extensions by public utilities under this subpart.

So the purpose of this amendment, Mr. President, generally is for clarification purposes, and it is my understanding that the distinguished floor manager and ranking minority member of the committee have reviewed this clarification amendment and hopefully will accept it.

Mr. ROBERT C. BYRD. Mr. President, will the distinguished Senator yield, with the concurrence of the manager of the bill?

Mr. BROOKE. I yield to the cosponsor of the amendment.

Mr. ROBERT C. BYRD. Mr. President, in order to make our residential conservation program effective, it must provide homeowner financing. The Energy and Natural Resources Committee has acted wisely in permitting utilities to continue with those conservation plans already in effect.

It is necessary, however, when credit is extended by utilities for the purchase of conservation materials or services, that these arrangements be protected by the Truth in Lending Act. We cannot authorize utilities to assist homeowners in their conservation efforts without insuring that all financial agreements will be unambiguous and fair.

I am very appreciative, and I wish to express my thanks to my distinguished friend from Massachusetts (Mr. BROOKE) for allowing me to cosponsor this amendment with him. I hope that the managers of the bill will accept it, because I think that it is being offered for the purpose of guaranteeing the protections to which we have alluded.

Mr. JOHNSTON. Mr. President, will the Senator from Massachusetts yield for a question?

Mr. BROOKE. I am very pleased to yield.

Mr. JOHNSTON. The distinguished Senator from Massachusetts understands, of course, that utilities may finance these energy conservation measures only where they have been in the business or have made substantial investments, I believe is the phrase, toward doing that; and, of course, this amendment does and should apply to those loans directly granted by the utilities.

But my question is, the Senator does not intend that the utilities must comply with the truth-in-lending law when their only connection with the loan is to arrange the financing, does he? Because we require them to arrange financing through other private institutions, and in that event, it would be the duty of the private institution, and not the duty of the utility, to comply with the law.

Mr. BROOKE. The Senator is correct. That is the intent of the amendment, and in such cases it is not the intention that the public utility be required to comply with the Truth in Lending Act.

Mr. JOHNSTON. Mr. President, we accept this amendment, which we believe will greatly improve the bill, and assure that the consumer protection that is provided under the act will be granted to public utility consumers. We think it will improve the bill.

Mr. HANSEN. Mr. President, the amendment offered by the distinguished Senator from Massachusetts I believe has great merit. I endorse it and I hope the Senate will accept it.

Mr. BROOKE. Mr. President, I thank my distinguished colleague from Louisiana, and my distinguished colleague from Wyoming, and also my distinguished cosponsor of the amendment, the distinguished majority leader.

I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. MATSUNAGA). The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 797

Mr. BROOKE. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Massachusetts (Mr. BROOKE) proposes Unprinted Amendment No. 797.

Mr. BROOKE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 23, after line 13, insert the following new subsection:

"(c) LAWS RELATING TO UNFAIR COMPETITION AND DECEPTIVE ACTS.—Nothing in this part shall be construed as restricting the authority of any agency or authority of the United States or of any State under any provision of law to prevent unfair methods of competition and unfair or deceptive acts or practices by public utilities."

Mr. BROOKE. Mr. President, subsection 102(d)(3) of S. 2057 requires participating States to submit for Federal Energy Administration approval programs "for preventing unfair, deceptive or anticompetitive acts or practices" in the implementation of utility programs. Because this language mirrors that of section 5 of the Federal Trade Commission Act, 15 U.S.C. 45, it is at least arguable that section 102(d)(2) effectively transfers jurisdiction over such acts or practices from the Commission to the FEA. A variant of this argument prevailed in *FTC* v. *Miller*, 549 F. 2d 452 (7th Cir. 1977). Alternatively, a regulated utility might argue that so long as its conduct conforms to a section 102(d)(2) program imposed by a State utility commission, the Federal Trade Commission may not pre-empt State action by finding such conduct violative of section 5 of the Federal Trade Commission Act. *Cf. Parker* v. *Brown*, 317 U.S. 341(1943). Also, it might be argued that the bill authorizes the Federal Energy Administration to exempt public utilities from complying with existing or future trade regulation rules in their implementation of utility programs. Although these arguments may not be legally sound, the statute should effectively preclude them.

The language I propose to add states:

Nothing in this part shall be construed as restricting the authority of any agency or authority of the United States or of any State under any provision of law to prevent unfair methods of competition and unfair or deceptive acts or practices by public utilities.

Mr. President, FEA stated in its July 21, 1977 letter to the chairman of the Energy and Natural Resources Committee that it supports this amendment.

This letter is reprinted on page 239 of report S. 2057.

An identical provision is included in the House-passed National Energy Act bill, and the FTC recommended the provision in its May 20, 1977 comments on the National Energy Act submitted to the House Energy and Power Subcommittee.

I hope the distinguished floor managers of this bill can see the obvious need for this clarifying language and accept this amendment.

Mr. JOHNSTON. Mr. President, one of our principal concerns in perfecting this bill has been with the possibility that it might create monopolistic situations. This amendment is not only acceptable but greatly welcomed by our committee because it clarifies the power of the FTC and its power to protect against monopolistic practices. We are, after all, putting together a large program, a new program, very great in scope. It is in an area where, in the past, we have found consumer rip-offs in great profusion. We greatly welcome this amendment and we accept it with enthusiasm.

Mr. HANSEN. Mr. President, the distinguished Senator from Louisiana, the manager of the bill, expressed the sentiments which reflect those held by the minority members of the commitee. I am happy to accept it.

Mr. BROOKE. I thank my colleagues.

Mr. President, I move the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. BROOKE. Mr. President, I yield the floor.

The PRESIDING OFFICER. Are there further amendments?

AGRICULTURAL ACT OF 1977— CONFERENCE REPORT

Mr. TALMADGE. Mr. President, I submit a report of the committee of conference on S. 275 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 275) to provide price and income protection for farmers and assure consumers of an abundance of food and fiber at reasonable prices, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respectives Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings.)

Mr. TALMADGE. Mr. President, I ask unanimous consent that the following staff members of the Committee on Agriculture, Nutrition, and Forestry be permitted to be present on the floor during the consideration of the conference report on S. 275: Michael McLeod, Henry Casso, Carl Rose, Dale Sherwin, Glenn Tussey, William Taggart, and Karen Schubeck.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TALMADGE. Mr. President, I bring before the Senate the conference report on S. 275, the Food and Agriculture Act of 1977.

Action on this measure was begun over a year ago when the committee solicited the views of a number of farm organizations and others interested in food and agriculture as to the direction new legislation ought to take. That compendium of views—"Farm and Food Policy 1977"—was published by the committee on September 15, 1976.

I introduced that bill, S. 275, on January 18, 1977. It set target prices at cost of production, with loan rates set by the Secretary of Agriculture at not less than 75 percent of the target price. The main objectives of the bill were to:

Extend for 5 years, through 1982, the basic price support programs for cotton, wheat, rice and feed grains;

Extend the food stamp program while making a number of badly needed reforms;

Improve and extend legislative authority for our food-for-peace program for 5 years;

Establish a new charter and clearer direction for the Federal role in agricultural research;

Extend for 3 years the authorization for appropriations of the Environmental Protection Agency to regulate pesticides.

And except for the last item dealing with EPA, which passed the Senate as a separate bill, the reported 4-year bill meets our goals plus many more.

Hearings on the bill began in February and continued during March. In all, the committee held 17 sessions in Washington, with additional subcommittee hearings and field hearings in some 14 places throughout the Nation.

Farm groups were particularly concerned over rising production costs and the need for more adequate supports under the new legislation. In my view, the target prices and loan levels had been set so low in the 1973 act that they were of little benefit to the producers. We wanted to develop new legislation to provide reasonable supports, which at the same time would not reduce our competitiveness on the world market.

The committee held extensive markup sessions, starting at 8 a.m., from April 19 through May 4, and the bill passed the Senate on May 24 in virtually the same form as reported by the committee.

In the meantime, the House Committee on Agriculture was also considering new legislation and on July 28, 1977, the House approved its version of S. 275.

A conference was held beginning on August 1 and lasted through August 5. The conferees met early and sat late, and the conference report now before the Senate is the result of that effort.

I might point out that the Senate was not able to maintain its position completely, but neither was the House. The conference report is truly a compromise, but a good compromise. It is a sound and supportable measure.

It achieves a number of basic agricultural goals.

First, it provides basic price and income assurance so that farmers will be willing to maintain production;

Second, the program is devised to allow the maximum market potential for our agricultural commodities;

Third, this bill provides the greatest possible farm-planning flexibility;

Fourth, the interests of consumers and taxpayers are fully protected;

Fifth, the program is designed to help strengthen the Nation's economy; and

Sixth, the program is designed to permit and encourage the family farm to grow and prosper.

It achieves these goals through its price support structure for the major agricultural commodities. It makes basic revisions in the price support program for peanuts to drastically reduce program costs.

But, it is more than just a price support measure.

It also provides for grain reserves; improved disaster payments; an extension of Public Law 480, the food for peace program; food stamps and commodity distribution programs; a national agricultural research policy, emphasizing nutrition and solar energy research; rural development and conservation; amendments to the Federal Grain Inspection Act; and a policy for Department of Agriculture advisory committees.

All of these programs are in the national interest, and they will serve our Nation well.

Mr. President, agriculture is extremely important to the Nation, and therefore it must remain strong and productive.

Last year, farmers spent almost $81 billion to produce crops and livestock. This went for equipment, machinery, seed, feed, fertilizer, petroleum, property taxes and other items which generate economic activity, especially in small towns and rural communities.

Sales of crops and livestock introduced an additional $94.8 billion into our Nation's economy. Transportation, processing, packaging, manufacturing, wholesaling and retailing all share in the economic activity generated by farming.

Farming and the industries which support it account for about one-fourth of our gross national product. In some areas of our country, the only economic activity is that generated by agriculture.

Agriculture is the Nation's biggest industry. It employs about 4.3 million workers, almost as many as the combined employment of the transportation industry, the steel industry, and the automobile industry.

Estimates show that about one out of every five jobs in private employment is related to agriculture. About 2 million people have jobs providing the supplies farmers use for production. Eight to ten million people have jobs storing, transporting, processing, and merchandising the products of agriculture.

In 1975, purchases by farmers included:

For new farm tractors and other motor vehicles, machinery and equipment, $5.4 billion;

For fuel, lubricants, and maintenance of machinery and motor vehicles, $5.6 billion;

For feed and seed, $15.1 billion; and

For fertilizer and lime, $6.8 billion.

American farm productivity is an example to the Nation. Output per man-hour on farms is over three times higher than 20 years ago. In manufacturing industries, output per man-hour is only 1.7 times as great; thus output per man-hour on farms is increasing nearly twice as fast as in industry and is an unmatched record in efficiency.

In 1952, one person out of seven was living on a farm producing agricultural products. Now, 1 person in 26 lives on a farm. This has released people to produce other wealth and services and is primarily responsible for the unequaled affluence of the Nation.

Total agricultural exports in the United States for the current fiscal year are estimated at about $24 billion, representing the production of about one out of every three harvested acres.

According to the U.S. Department of Agriculture, the net agricultural contribution to the U.S. trade balance last year was about $12 billion. This contribution helped offset the unfavorable nonfarm balance of about $8.5 billion last year.

There are only 2.8 million farms left in the United States, and the farm population totals only 8.3 million persons. About 215 million persons in the United States and many more millions throughout the world depend upon these farms and farm operators for most of their food and fiber. All of us are consumers, and as consumers we all benefit from the increased efficiency created by modern technology in the production and marketing of farm products.

Food prices have increased due to a variety of circumstances beyond the control of anyone.

But, even with the upsurge in food prices, farmers today receive only 40 cents out of every dollar consumers spend for U.S. farm produced foods. The other 60 cents goes for transportation, processing, manufacturing, wholesaling retailing, and profits to the middle-men.

The major purpose of S. 275 is to continue and improve the Nation's farm and food programs in order to provide income protection for farmers and assure consumers of an abundance of food and fiber at reasonable prices. But, our farmers must not be asked to bear the entire risk of unforeseen developments that would be devastating to the agricultural community—and to all consumers of agricultural commodities.

Mr. President, I will not go into the fact that the conference report is less costly than the Senate-passed bill.

The Senate thoroughly discussed the issue of the cost of the conference report yesterday, and the Senate determined by an overwhelming margin that the expenditures that will be made under the conference report are fully justified.

They are justified by the desperate plight that much of American agriculture finds itself in.

They are justified by the fact that conditions in much of the farm economy are more severe than they have been since 1933.

They are justified by the fact that a strong and sound agricultural economy is a basic underpinning of a healthy U.S. economy.

They are justified by the fact that we must keep our farm productive capacity whole if we are to continue to assure the consumers of this Nation an abundant supply of food and fiber at stable prices.

I am proud of the conference report, for it encompasses the most comprehensive food and agricultural policy that has ever been enacted in one bill in the history of this country.

I am proud because, working together, the Congress and the administration will have succeeded in a very difficult task When this bill is signed into law, we will have succeeded in enacting a comprehensive farm bill in the first year of a new administration for the first time since 1933.

We succeeded in this task despite the fact that when the Senate Agriculture Committee was going through its hearings and deliberations on farm legislation, most of the key officials in the Department of Agriculture had not yet been appointed.

However, we were fortunate enough to have as Secretary of Agriculture, a man who had years of experience as a leading member of the House Agriculture Committee, and as a working farmer.

I am extremely pleased with the cooperative attitude that Secretary Bergland has displayed throughout the farm bill deliberations. No Cabinet member has ever tried harder to cooperate with the Congress in writing a major bill than has the Secretary of Agriculture. President Carter is indeed fortunate to have Secretary Bergland on his team.

The Senate deliberated on this measure for many weeks and many days in markup, and we had many days, early and late, in conference with the House. We had an amicable and peaceful relationship with the conferees in the House. We have worked out an agreement which we believe is fair. We believe the President of the United States will sign this legislation into law. I recommend that the Senate approve it.

In that connection, I send to the desk, Mr. President, a statement from Senator HUMPHREY in support of the conference report and ask that it be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT OF SENATOR HUMPHREY

The Food and Agriculture Act of 1977 is a highly significant and important piece of legislation with broad implications.

While this bill does not have everything that I would like, it is a significant improvement over current law.

It truly is both a food and agriculture act. This legislation affects far more than the one out of 25 Americans engaged in farming. It will strengthen agricultural research, improve commodity support programs, revamp disaster assistance, make important reforms in the food stamp program, and outlines a set of rules for an on-farm grain reseal program that will benefit both farmers and consumers.

Further, this bill makes advances in dairy programs and modifies the operation of the PL-480 "Food for Peace" program.

I am particularly pleased that Congress has seen fit to develop a program that should lead to stabilization for America's sugar producers. It is imperative that the Administration move immediately to implement the provisions of this section of the bill. Our sugar producers are experiencing tremendous hardship with prices that are close to half the cost of production.

The quality of the Food and Agriculture Act of 1977 has been enhanced by inputs of scores of concerned groups and individuals from every corner of this nation. The shaping of this bill has been assured by the dedication of one of the most able Committee staffs in the Senate. But most importantly, it has been the commitment of Chairman Talmadge and Senator Dole, Ranking Minority Member, that has guaranteed the excellence of the bill that we have before us.

The Conference Committee that toiled from August 1–5 was one of the most informed and diligent that I have experienced. I commend the distinguished Representative from Washington, Mr. Foley, for the able manner in which he chaired the more than 40 hours of meetings.

This bill was produced by a Conference Committee that included an unprecedented—at least in modern times—number of Congressmen who never before had been involved in Conference activities on major farm legislation. These individuals, including Congressman Rick Nolan of my home state of Minnesota, will develop the farm and food policies of tomorrow.

The imprint on this legislation of my good friend from Minnesota, Secretary of Agriculture Bob Bergland, is clear. Secretary Bergland was most helpful and cooperative in formulating the bill.

This bill, which will remain on the statute books through September 30, 1981, has been molded by a microcosm of the multitudes it is designed to serve. Because of this, I believe it will serve all—including a great many beyond our own boundaries—in a fair manner.

COMMODITY SUPPORT PROGRAMS

Our feedgrain and wheat farmers are suffering the consequences of an unenlightened fencerow-to-fencerow farm policy. I would like to see conditions that would permit this nation's farmers to produce to their full efficiency and reward them for doing so. Unfortunately, those conditions do not yet exist. We must work more diligently to increase our food exports—a move that would increase farm income and reduce budget outlays.

The commodity support programs are a significant improvement over existing law. I would have preferred higher levels. No one, however, can tell how effective these levels will be in protecting farmer income. In fact, wheat and feedgrain producers have yet to receive their first target price payments. We will have to watch the adequacy of these payments and the extent to which these payments tend to benefit land-rich rather than land-poor farmers.

I am particularly pleased that we have gotten away from historic allotments to a current plantings basis for our support payments program. This change will make our farmers even more responsive to changing market conditions.

DAIRY PROVISION

Perhaps no segment of American agriculture has changed more since World War II than the dairy sector. Recent statistics on dairying have been startling. The number of dairy producers in this nation has declined dramatically, yet production has climbed astronomically.

In my home state of Minnesota, it is not uncommon to find herds that are twice as productive as predecessor herds on the very same farms just one decade ago. Our dairyment have reached new heights in produc-

tivity, yet this productivity constantly threatens to throw these producers into a price depression. We must watch this situation closely so that production remains in balance with demand. This will, I am certain, require even more steadfast effort in the years ahead.

The dairy support provisions are superior to existing authority. The indemnity program has been strengthened. I am pleased with this section.

CORPORATE AGRICULTURE

The Congress has been alerted once again to intrusions by non-food producers into agriculture. It clearly is the intent of Congress that those who make their primary source of income off the farm should not be encouraged by government policy to become producers of food and fiber. While this principle is clear and has strong consensus support, the application of it remains to be implemented. This bill includes provisions that require a close examination of this issue.

We must watch this situation very closely. History clearly shows that those who live on the land, who draw their primary source of income from the land, are those who produce food with longterm concerns in mind rather than immediate profits.

GRAIN RESERVE PROGRAM

This is a particularly important section of the bill. Grain reserves clearly will benefit both producers and consumers by smoothing out the wide fluctuations in food prices.

This section specifies trigger release points that are fair to all interests involved. I am somewhat disappointed that reserve provisions that relate to feedgrains leave considerable discretion at the hands of the Secretary of Agriculture. While I am confident that the current Secretary can manage a feedgrains reserve in an effective and fair manner, I am concerned that future Administration officials may not have the same even-handed concern.

In many ways, I think that historians will consider this particular section to be particularly significant as a major departure in food policy.

DISASTER PROGRAMS

As efficient as our producers are, they remain at the mercy of one unknown—the weather.

We must have a disaster program that protects our producers from the vagaries of the weather. A single bad season can totally wipe out a farmer. In recent years, we have seen numerous examples of where our disaster programs were inadequate. This bill provides vast improvement.

However, I think we need to go even further. We need a comprehensive crop insurance program. There are a number of bills in Congress to accomplish such an aim. Also, I would like to applaud the Secretary of Agriculture for establishing an experimental crop insurance program. This effort by the Administration will give us further experience by which to judge different approaches to this problem.

FOOD STAMPS

I am extremely pleased that the purchase requirement for food stamps finally has been eliminated. The purchase requirement prevented the poorest Americans from access to this important program.

Unfortunately, the elimination of the purchase requirement has meant that new eligibility restrictions will be imposed on higher income groups. What this means, I am afraid, is that many working poor will be unable to take advantage of this program. I am sorry that we had to make this choice.

This may be the last Farm Bill to include food stamps. While some may applaud this, I believe that such a view is shortsighted. Many urban members of the Senate and House have supported the Farm Bill because of the inclusion of food stamps. If food stamps are removed, then urban support is likely to decline. The importance of this is that farm program supporters will have to find new means to build the necessary Congressional support.

PUBLIC LAW 480 "FOOD FOR PEACE"

This is one of the most important programs in the bill. It has helped us to develop markets throughout the world—markets that should help us sustain strength in our farm economy. At the same time, the humanitarian aspects of this program are well known and documented.

While the operation of this program has been improved by the legislation, there are a number of provisions that are troublesome from my point of view. We should remove all restrictions on this program. Food should not, in my opinion, be restricted from going where it is desperately needed. I will endeavor in future years to see that these restrictions are removed.

CONCLUSION

This bill marks a turning point in our nation's farm policy. Given the disastrous economic conditions in the Great Plains and Midwest, we will have our first full test of the target price concept. Congress is going to have to watch the effectiveness of this legislation. If we find it inadequate, we should realize our shortcomings and try to improve it. I do not know how well it will work. I do, however, believe that this legislation is far better than existing law. Also, I believe that it is in the best interests of both consumers and producers. Therefore, I commend this bill to my colleagues for their support.

Mr. LEAHY. Mr. President, I strongly support the provisions of S. 275 as agreed to in conference. I believe the bill achieves the balance necessary for a comprehensive national food policy. The bill as reported from the conference committee delicately balances a number of necessary, yet sometimes competing, objectives—maintenance of a strong market orientation for American agriculture, the greatest possible freedom for farmers to make their own management decisions, maximum price assurance to protect farmers from economic disaster as well as to provide a stable supply of food and fiber to consumers, and minimum costs to our taxpayers.

I would like to commend the hard work of the conferees. I especially praise the distinguished chairman, Senator TALMADGE, for his leadership in guiding this legislation through all the hurdles it has faced over the last 9 months.

As a Senator who played an active role in consideration of this legislation, there are a few provisions I would like to clarify before we endorse the conference report.

First, the conference agreement on S. 275 contains a number of important provisions relating to the dairy industry. I would like to briefly comment on two which amend the dairy price support program authorized by the Agriculture Act of 1949.

This legislation increases the minimum level of dairy price support from 75 to 80 percent of parity through March 31, 1979. This is the provision approved by the Senate earlier this year. This will allow establishment of the price support level in a range between 80 and 90 percent of parity. While retaining the flexibility needed by the Secretary of Agriture in administration of the program, the higher minimum affords farmers a needed measure of price assurance.

An important feature of the legislation is the requirement that the price support level be adjusted semiannually to reflect changes in the parity index. The purpose of such an adjustment is, quite simply, to prevent inflation-fed erosion of the price support level during the marketing year. By requiring such semiannual adjustment, we are seeking to assure the dairy farmer that the level of price support throughout the marketing year will have the same value, in terms of parity, as it did at the beginning of the year.

Several times in recent years, sharp increases in the cost of production have reduced the value of the price support level during the marketing year, thus lessening the price assurance the program is intended to provide.

In the administration of the price support program, the practice has been to establish a price support level at the beginning of the marketing year—presently April 1—and to maintain the announced dollar level of support through March 31 of the following year. A midyear adjustment has been made, partially as the result of congressional urging, in each of the last 2 years. Secretary Bergland is presently considering a similar adjustment for the current year.

The importance of such action can be seen if we take a look at the impact of inflation on the price support program in several recent years. In March 1973, the price support level was set at 75 percent of parity, $5.29 per hundredweight. By August of that year, the $5.29 level represented little more than 71 percent of parity.

Under congressional mandate, the price support level was increased to $5.61 per hundredweight in August 1973—80 percent of parity—but by March 31, 1974, the end of the marketing year, this had declined to 69 percent of parity. For the 1974–75 marketing year, the support level was set at 80 percent of parity on April 1, 1974—$6.57 per hundreweight. By the end of December 1974, $6.57 represented less than 73 percent of parity.

Thus, by mandating a midyear adjustment as we have in S. 275, we are assuring dairy farmers that the effect of inflation will be moderated.

Some concern has been expressed regarding the precise interpretation of the semiannual adjustment provision. S. 275 states:

> The support price of milk shall be adjusted by the Secretary at the beginning of each semi-annual period after the beginning of the marketing year to reflect any estimated change in the parity index during such semi-annual period.

As the author of the amendment in the Senate Committee on Agriculture, Nutrition, and Forestry, it was my intention that the semiannual adjustment take into account any erosion in the price support level as a percentage of parity since the beginning of the marketing year. Restoring the price support level in this manner will have the effect of accomplishing our goal, the as-

surance to the dairy farmer that the announced level of price support affords the same degree of price assurance at the end of the marketing year as it did at the beginning of the year when it was established.

The second area of the farm bill I would like to address is the food stamp section. In particular, I draw my colleagues' attention to the compromise the conferees reached on the income deductions section of the bill. I believe the compromise needs some explanation. In the conference it was clear that the House conferees were unable to accept the Senate version of the excess shelter deduction because of the higher gross income ceiling for four-person households. As the author of the shelter deduction, I suggested to the conference committee a way in which that major objection could be met.

That compromise is that instead of a household being able to claim both an excess shelter and a dependent care—as in the Senate bill—a household could claim a shelter and/or dependent care deduction up to $75 a month. Thus, the gross income ceiling remains at the level adopted by the House.

The computation of the shelter and dependent care deductions would be the same as provided under the Senate bill. That is, the dependent care deduction is for the actual cost of dependent care when necessary to allow a household member to continue employment, or training or education which is preparatory for employment, and the shelter deduction is for the amount by which a household's shelter costs exceed 50 percent of their income—after other deductions, including the dependent care deduction. Either deduction, or a combination of both, would be limited a maximum of $75 a month, and the dependent care and shelter costs would be calculated as anticipated during the certification period and as defined under current rules.

There are some other areas of the food stamp title of S. 275 which are very important to the poor people of my State. Vermont is one of the most rural States in the Union, and as such, it is difficult for many poor households to currently participate in the food stamp program, because of the transportation difficulties. One provision of S. 275 will increase the program's accessibility for rural poor. It requires the Secretary to set up standards—standards with teeth—for the location, and hours of operation of, certification and issuance offices. This, combined with the elimination of the purchase requirement, should make the program truly open to all those in need. I urge the Secretary to take the intent of this provision seriously and endeavor to implement our goal of reaching all those in need. Without accessible offices, the program cannot hope to meet its objective of insuring that all needy people have the opportunity to improve their diet through the use of food stamps.

The conference adopted the House version of the income exclusion for reimbursements. I am informed that the current rules require some sources of money to be counted as income even when they do not constitute a gain to the household. In Vermont, again because of its rural character, some of the workers in the community action agencies, as well as in other jobs, are reimbursed for travel costs incurred in the context of their work. Currently, the food stamp offices must count these mileage reimbursements as income for food stamp purposes. This clearly does not make any sense. The conference-adopted provision excludes as income any reimbursement of any kind—whether it is received by workers, students, or CETA employees—which does not constitute a gain to the household. Though a very minor provision in the act, this reform will mean a great deal to those it affects.

These provisions of the food stamp section of the farm bill will certainly have a great effect on making the food stamp program more accessible and more equitable. However, another provision of the bill, the elimination of the purchase requirement, will have the greatest impact on the equity, simplicity, and accessibility of the program. I thank Senators McGOVERN and DOLE for their sponsorship of this provision. Because EPR is such an important gain, I hope that it will be implemented as soon as possible after this bill's enactment. This reform is not dependent on other features of the bill, and thus does not have to wait until more complicated provisions are in place. I urge the Secretary not to delay in implementing the EPR provision.

Mr. President, thank you for the opportunity to address these issues. I urge my colleagues to adopt S. 275 with the amendments suggested by the conference committee.

Mr. CURTIS. Mr. President, will the distinguished Senator yield?

Mr. TALMADGE. I yield to my distinguished colleague from Nebraska, who serves so ably not only on the Committee on Agriculture but on the Finance Committee, also.

Mr. CURTIS. Mr. President, I commend the fine work of the distinguished chairman of the Committee on Agriculture and Forestry. Not only is he knowledgeable of agriculture, but he is fair to all segments of the industry. He is as conscientious in dealing with the agricultural production of States far removed from his own State of Georgia as he is with his own region.

I must also commend him for his ability in presiding over meetings. He is courteous to every member; all viewpoints have an opportunity to be expressed; yet he can expedite the legislative program.

Mr. President, I wish to ask the distinguished chairman one or two questions about the support program.

Mr. TALMADGE. First, let me thank my distinguished colleague for the generosity of his remarks. Then I shall respond to any questions he may ask.

Mr. CURTIS. My first question is this: In reference to wheat, what will be, under this proposal when it becomes law, the support and loan rate, the commodity loan rate, on wheat for the 1977 production?

Mr. TALMADGE. $2.25 a bushel.

Mr. CURTIS. And what will be the target price?

Mr. TALMADGE. $2.90 a bushel.

Mr. CURTIS. Does this act change the commodity loan rate and the target price over existing law with respect to wheat of prior years?

Mr. TALMADGE. It does not.

Mr. CURTIS. In other words, if someone has on hand wheat produced in 1976 or before, it is not affected in any way by this bill?

Mr. TALMADGE. The Senator is correct.

Mr. CURTIS. In reference to corn and feed grains—and we understand, of course, that feed grains are fixed comparable to the rate on corn—what will be the commodity loan rate for corn produced in the calendar year 1977?

Mr. TALMADGE. $2 per bushel.

Mr. CURTIS. And what will be the target price?

Mr. TALMADGE. $2 per bushel.

Mr. CURTIS. Is there anything in this legislation that deals with what might be termed old corn—corn produced in 1976 or prior years?

Mr. TALMADGE. There is not.

Mr. CURTIS. No change in any right to reseal or anything of that sort?

Mr. TALMADGE. No sir.

Mr. CURTIS. How long is the bill extended for?

Mr. TALMADGE. Four years, except for the agricultural extension, which I believe is 5 years. Research and extension is 5 years. The remainder is 4 years.

Mr. CURTIS. What will be the commodity loan rate on wheat for that which is produced in 1978 and subsequent years?

Mr. TALMADGE. It will be $2.35 in 1978.

Mr. CURTIS. The loan rate?

Mr. TALMADGE. That is correct.

Mr. CURTIS. What will be the target price?

Mr. TALMADGE. It will be $3. If we have a crop of 1.8 billion bushels or less, it will be $3.05.

Mr. DOLE. Will the Senator from Nebraska yield?

Mr. CURTIS. The distinguished chairman has the floor.

Mr. TALMADGE. I yield to my colleague from Kansas.

Mr. DOLE. I think that under the conference agreement, that loan rate can be reduced in 1978 by not to exceed 10 percent.

Mr. TALMADGE. Ten percent, yes.

Mr. CURTIS. And what is the target rate on wheat for 1978?

Mr. TALMADGE. The 1978 target rate of wheat is $3 and if the crop is less than 1.8 billion bushels, it will be $3.05.

Mr. CURTIS. Now, the same questions in reference to corn: What will be the commodity loan rate for corn produced in 1978 and what will be the target price?

Mr. TALMADGE. The loan rate will be $2; the target price will be $2.10.

Mr. CURTIS. What provision, if any, is in this bill in reference to a set-aside or other method of idling acres with reference to wheat reserve?

Mr. TALMADGE. What reserves? It authorizes the Secretary to create a set-aside, which the Secretary has done for next year, as the Senator knows, for 20 percent of the acres planted for harvest in 1978. It also authorizes a grain reserve of 300 to 700 million bushels of wheat.

Mr. CURTIS. What are the similar features with reference to corn?

Mr. TALMADGE. Corn has no specified levels in respect to reserves.

Mr. CURTIS. In both the area of reserves and set-asides, it is discretionary with the Secretary?

Mr. TALMADGE. The Secretary of Agriculture, yes.

Mr. CURTIS. One more question: I believe the provision for four pilot plants to use the products of the farm and forest to produce energy is in both the House and the Senate bill.

Mr. TALMADGE. The Senator is correct.

Mr. CURTIS. Of course, that was beyond the reach of the conference and is still there.

Mr. TALMADGE. That is correct.

Mr. CURTIS. I thank my colleague from Georgia.

Mr. TALMADGE. I thank my colleague from Nebraska for his contribution.

I yield now to my distinguished colleague from North Dakota.

Mr. BURDICK. I wish to join in the commendation of my friend from Georgia. The Senator and his committee worked under some very trying circumstances and I think they have done the best job they can do.

(Mr. ABOUREZK assumed the chair.)

Mr. BURDICK. I have one question about wheat. Under the present law, part of the mechanics that are used in bringing about support prices is deficiency payments. Has there been any change in the operation of deficiency payments?

For example, under the present law, a farmer who has a 100-acre allotment could divert those acres to another crop and not prejudice his right to deficiency payments. Has that been changed in any way?

Mr. TALMADGE. We went to current plantings on deficiency payments.

Mr. BURDICK. In other words, there has been no change in that regard.

Mr. TALMADGE. That is right.

Mr. BURDICK. I thank the distinguished chairman.

Mr. TALMADGE. I thank the distinguished Senator.

I yield to the distinguished Senator from Hawaii.

Mr. MATSUNAGA. I thank my friend from Georgia.

I join in commending the distinguished chairman of the committee, Senator TALMADGE, for the skillful manner in which he brought about an acceptable compromise with the House on a most complex bill, one which the Congress can live with. I expressly wish to commend him for resolving a most difficult problem with reference to sugar.

If I may put a question to the distinguished chairman about sugar, it is my understanding that, in accordance with the amendment requested by me and my senior colleague Senator INOUYE and offered by Senator HUMPHREY, all of the 1977 crop will be provided, with price support, either by existing laws, or by the so-called de la Garza amendment in the pending bill. Am I correct in my assumption?

Mr. TALMADGE. The Senator is correct. First, let me thank him for his generous remarks.

We knew when we went to conference and accepted the sugar amendment that was offered in the House by Congressman DE LA GARZA that more than half of the harvest in Hawaii had already been harvested.

So we put this provision in the conference report:

> Nothing in this subsection shall affect the authority of the Secretary to establish under any other provision of law a support program for that portion of the 1977 crop of sugar cane and sugar beets marketed prior to the implementation of the program authorized by this subsection.

We did that specifically to take care of the Hawaiian problem.

Mr. MATSUNAGA. I thank the Senator from Georgia, the distinguished chairman of the Agriculture Committee, for his clarification of this vital point.

On behalf of the people of Hawaii, and especially those 30,000 whose jobs depend on the sugar industry, I also wish at this time to express my deepest appreciation not only to the chairman, but also to the ranking minority member, Senator DOLE, the chairman of the House Agriculture Committee and of the House conferees, Mr. FOLEY, and all the remaining conferees on the farm bill for their acceptance of this crucial amendment proposed by me and Senator INOUYE. My special thanks go to my great and most gracious friend, the Senator from Minnesota, Mr. HUMPHREY, who, although his State did not stand to benefit directly from acceptance of our proposed amendment, consented to offer the amendment on behalf of Hawaii, and who was largely responsible for its acceptance. The conferees and now the Senate by their action have been fair to the Aloha State and understanding of its plight, in recognizing the unique situation which exists there with respect to the growing of sugar; and let me say this with certainty; the people of Hawaii are truly grateful for their generous action. Mahalo Nui Loa.

Mr. TALMADGE. I thank my distinguished friend from Hawaii.

I yield now to my distinguished friend, my able colleague, the ranking minority member from Kansas.

Mr. ALLEN. Will the Senator yield briefly to me before yielding to the Senator from Kansas?

Mr. TALMADGE. Yes, to the distinguished Senator from Alabama.

Mr. ALLEN. Mr. President, I thank the distinguished chairman of the committee and I thank the distinguished Senator from Kansas for allowing me to say a few words at this time.

Mr. President, I commend the distinguished chairman of the Agriculture Committee, the distinguished Senator from Georgia (Mr. TALMADGE), for his fine work as chairman of the Agriculture Committee, for his fine work as a Senator from Georgia and from the Nation.

The farmers of Alabama and, indeed, the farmers of the Nation have a true friend in Senator TALMADGE. He is held in high regard in my State by our farm population and by all of our citizens. We look to him for leadership on our farm programs and he has never let our farmers down.

We appreciate his expertise, his ability, and the manner in which he has handled the farm legislation here in the Senate.

I wish to commend also the ranking minority member, the Senator from Kansas (Mr. DOLE), who works in close cooperation with the chairman and with the committee, and our splendid staff, which is a nonpartisan, nonpolitical staff, available to every member of the committee to give advice, to give information, to help in shaping legislation.

I think we are most fortunate on the Agriculture Committee. I think the Senate is most fortunate to have a committee headed by Mr. TALMADGE with Mr. DOLE as the ranking minority member. I commend both of these Senators for their fine work in conference and in getting these very complex problems worked out.

I commend all of the members of the conference committee for their spirit of cooperation and give and take on the farm bill, which is most important to farm people and to the Nation as a whole. I am delighted that an agreement has been reached on the conference report.

Mr. President, I rise in support of the conference report on S. 275, the Food and Agriculture Act of 1977, and urge my colleagues to accept it without any further delay.

During the hearings and markups in both the House and Senate earlier this year and while the bills were debated in the Senate in May and in the House in July, the farmers of this Nation waited patiently. They waited to hear just what message the Congress would send to them in this year's farm legislation. When they were asked to expand production several years ago, they responded as only the American farmer can repond—by producing an abundance of wheat, feed grains, and other commodities. The doomsday prophets of worldwide starvation were weeping and wailing, but the farmers of America saw to it that there was an ample supply to meet not only domestic needs and export sales but enough to provide assistance to the starving nations of the world while assuring a more than adequate carry over.

Now, in a time of abundant supply when farm prices have plunged downward are we going to prove ourselves to be fair-weather friends to our food producers? To reject this report would be a slap in the face to this important segment of our society. Such action would not only be a cruel blow to those who feed us; it would be an expression of ingratitude. These farmers are not only waiting to hear our opinion of them, but they are anxiously waiting to learn exactly what plans they should make about

future planting. Some of their decisions must be made immediately and to prolong this legislation would be grossly unfair and unjust to them.

In Alabama, Mr. President, our farmers do not need any more discouragement in any form because 1977 has just not been a good year for them. My State has experienced the worst drought in its history. Instead of rewards for their months of labor they have experienced disaster. Officials of the Alabama Department of Agriculture and Industry, have made a conservative estimate of a $200 million loss to the farmers of our State. The loss to cattlemen alone has been set at over $100 million this year. To make bad matters worse, they have been hit hard by insects in the form of army worms. Dr. J. Michael Sprott, director of the Alabama Cooperative Extension Service stated in a recent newspaper interview:

> The combined import of this year's drought and insect damage to Alabama's agricultural industry is inestimable. Either of these would have done serious damage to our food and fiber sales, but together, they are almost more than the agricultural community can absorb.

We have written off the corn crop in Alabama this year, but other areas of the country are experiencing a bumper crop and the supply is driving prices down, hurting them even more. Our cotton yields have been cut by one-fourth to one-half bale per acre in many areas of the State. Alabama's hay crop is about 30 percent of normal and winter-feeding needs still have to be met.

Mr. President, in a situation like this I would find it difficult indeed to say to the agriculture producers in my State that the Senate in its wisdom rejected this conference report.

For too long the consumer has been pitted against the farmer in this country. Four percent of the population of this country represented by the farmer feeds the other 96 percent of us. If the farmer is discouraged the consumer is faced with a supply shortage which means increased cost for food.

In recent years, the cost of production of agricultural commodities to the farmer has more than doubled with increased costs for gasoline, oil, diesel fuel, natural gas, fertilizer, and machinery. In the month ended August 15, 1977, farm prices fell 3 percent. It was the third monthly decline in a row. In fact, on August 26, 1977, USDA issued a projection that total net farm income will be $19.3 billion for 1977, off 15 percent from 1976. In 1972, total net farm income was $18.6 billion. Since then, there has been a cumulative 45-percent inflation. Just to be on par with their situation in 1972, this year's total net income would need to be $26.7 billion.

At this juncture, Mr. President, it should be pointed out that the authority for the food stamp program expires at the end of September. If this report is rejected there is little chance that any revision could be brought before the Congress before that expiration deadline. Imagine, if you will, the mass confusion and outrage should this situation develop.

All of these things considered, Mr. President, it is imperative that we adopt this conference report without further delay. To do otherwise, would deny the income assurance provided by these programs to our farmers to encourage their continued production of food and fiber.

Mr. TALMADGE. Mr. President, I deeply appreciate the most generous, complimentary remarks about the chairman and the ranking minority member made by the distinguished Senator from Alabama. I know of no member of our committee who works more diligently, more effectively, on behalf of the farmers of our Nation than the Senator from Alabama. I deeply appreciate his generous remarks.

Mr. President, I feel I would be derelict in my duty if I did not point out the fact that, as the Senator from Alabama has stated, our committee operates on a nonpartisan basis, both the members of our committee and the staff of our committee, which I think is equal to the staff of any committee of the Senate, or any committee of the House, in their diligence, their dedication and ability, their service to every Senator that calls on them, their willingness to work day and night.

It has been a particular pleasure for me to work with my colleague from Kansas, who is the ranking minority member of the Committee on Agriculture. He and I happen to serve on our two committees, Finance and Agriculture. Our relationship has been extremely pleasant, extremely cordial. At no time has any element of partisanship ever entered into the operation of our committee and I can say that about every member of our committee, both on the Democratic side and on the Republican side. We work together in what we think is the interest of the Nation, the interest of farmers, the interest of consumers, without regard to partisanship, personalities or party affiliation.

Mr. President, I now yield the floor to my distinguished colleague, the ranking minority member of the Committee on Agriculture, Nutrition and Forestry.

The PRESIDING OFFICER (Mr. MATSUNAGA). The Senator from Kansas.

Mr. DOLE. Mr. President, I thank my distinguished chairman.

Certainly, as has been indicated, I commend the chairman for his leadership and commend other members of the committee who have served. I see the distinguished Senator from North Dakota is on the floor, who served on that committee for a long time and was known as Mr. Wheat for many years in that committee and has been most helpful in our deliberations in the conference. As has the distinguished Senator from Alabama, who I think almost singlehandedly, hour after hour, day after day, conducted hearings. For that we are most grateful, in addition to his even-handed assistance to all of us on the committee. I also wish to thank the distinguishhed Senator from Indiana (Mr. LUGAR) for his fine contribution on this bill.

The distinguished Senator from North Carolina (Mr. HELMS) and the distinguished Senator from California (Mr. HAYAKAWA) were very helpful and served well on our committee in developing this farm bill. Senator CURTIS served diligently from the beginning of the hearings all through the consideration of the bill and served with distinction as a conferee. The distinguished Senator from Oklahoma (Mr. BELLMON) was invaluable as a true farmer himself, putting the ideas expressed into understandable examples of how they would actually work in farm situations.

So I think it goes without saying that we, of course, appreciate the work of the staff, both those who represent Republicans and Democrats, and, as the distinguished chairman pointed out, for the most part, we have a nonpartisan staff.

But the point is that we, like other committees in the Congress, have our differences, not particularly partisan differences. Sometimes it depends on where we live, it depends on the crops we produce and the interest of the people in our particular areas.

But as I look up and down the committees on both sides of the aisle, I find, as has been expressed before, a great deal of interest in legislation this year. I cannot think of a single member on the committee who did not have a significant input somewhere along the line in the consideration of this legislation—and we have a diverse committee. We have different views.

But I suggest that if one looks at the bill passed by the Senate and then takes a look at the results of the conference committee, we come up with a pretty good piece of legislation, not all that some of us would have liked, maybe there are things in the bill we would have written differently, changes would have been made, but it seems to me we have the basis for a reasonable farm support program.

But the Senator from Kansas stresses, as other Senators have been stating on this floor on both sides of the aisle, there is a possible crisis in rural America. The vicious cost-price squeeze that has been adversely affecting wheat producers for some time has now spread to the producers of feed grains, cotton, and other commodities. Slack demand and intense competition in world markets has resulted in distressed farm prices throughout rural America.

In addition, there have been problems of drought in both the Southeast and the far western parts of our country.

The deepening of the farm crisis is being felt by the industries and workers that service the American farmer. A farm implement dealer in Garden City, Kans., pretty well summed up, in the following statement, the ripple effect of the declining farm economy on businessmen servicing the farmer:

> This is one of the most depressed economic times we have ever seen. There is no way things can continue as they are—we cannot last.

Thus, the crisis which is now embracing more and more farmers is spreading to those who build and sell tractors and to others whose livelihoods relate to agriculture. There is no way that the na-

tional economy can prosper for very long with depression conditions on American farms.

So it would seem that this implement dealer in the rural community of Garden City, Kans., quite well sums up the problem.

Farm commodity prices have continued to decline during the period of consideration of this bill. Agricultural price data reported by the USDA show declines in prices received by farmers between January and August of this year as follows:

Average price received by farmers

Commodity:	1–15–77	8–15–77
All wheat, per bushel	$2.43	$2.02
Corn, per bushel	2.34	1.64
Soybeans, per bushel	6.80	5.43

I am happy that the target price for wheat was increased—and justifiably so—for the 1977 crop and subsequent crop years on the basis of the cost of production. Farmers who produce to meet our ever increasing food requirements and demands for export need protection against disastrously low prices caused by overproduction resulting from unusually favorable weather conditions worldwide. Many commodity problems were addressed in this legislation and now it should be implemented to provide as much assistance as possible to the distressed agriculture economy.

The farm parity ratio has reached a low at 64 percent in August. Only in March of 1933 were conditions worse when the average parity ratio was 55 percent. Wheat and feed grain farmers are particularly hard hit. Prices received last month by wheat farmers represented only 40 percent of parity; feed grains were at 48 percent of parity.

While only improved demand and consequent higher market prices can cure the current farm crisis, this bill can help in alleviating the distress that is becoming more and more widespread in rural America.

Some of the specific major features that will be of assistance are as follows:

PAYMENT LIMITATIONS

Adjustments were made in the limitations on crop program payments any person can receive annually. Under existing law producers of wheat, feed grains, and upland cotton are limited to $20,000 under one or more of these programs and rice participants are limited to $55,000.

Under the new farm bill the limitation on total payments received by participants in the wheat, feed grains, and upland cotton programs is established at levels as follows: 1978—$40,000; 1979—$45,000; and 1980—$50,000.

The payment limitation on rice is to be reduced from $55,000 by 5 percent in 1978 and will be $50,000 in 1979. Beginning in 1980, payments to a producer of wheat, feed grains, upland cotton and rice shall not total more than $50,000 annually. Disaster payments are exempt from payment limitations.

In view of the current farm crisis, an upward adjustment in the payment limitation for 1977 should have been made for producers of wheat, feed grains, and cotton.

WHEAT

The wheat section of the bill does not fully protect the farmer. I am pleased however that the House rejected the lower target price levels advocated by the Carter administration and reported to the floor by the House Agriculture Committee. The $2.90 per bushel target price for 1977 was the level I worked for in committee and with the able assistance of many colleagues on the Agriculture Committee this provision survived even against the veto threats of the administration by a vote of 50 to 46 on May 24, 1977. Target prices for 1978 were compromised in conference at $3 per bushel unless the crop is 1.8 billion bushels or less, in which case it will be $3.05 per bushel. The historical acreage allotment system has been eliminated in this new program and the basis for program participation will be planted acres.

Wheat loan levels for 1978 will be $2.35 per bushel unless the administration chooses to lower it under a provision adopted from the House bill which allows this loan level to be lowered if market prices fall to not more than 105 percent of the loan level. Target prices for 1979–81 crops will be the previous year's price plus escalation on the basis of increases in the cost of production.

Set-aside is provided in this bill at the discretion of the Secretary when he determines that the total supply of wheat will, in the absence of such a set-aside, likely be excessive taking into account the need for an adequate carryover to maintain reasonable and stable supplies and prices to meet a national emergency. The announced intention of a set-aside requirement is yet to be implemented and I have some reservation on how this program will affect summer fallow areas.

The Secretary has the option of making a payment for land diversion but has chosen not to, according to his announcement of set-aside intention.

The disaster program changes allow for a larger payment to the grower hit hardest by a disaster. The lower yields will get a larger percentage of target price payment. This program is extended for 2 years, which will allow Congress to develop a new crop insurance disaster program.

FEED GRAINS

The feed grains section provisions are established for corn and the Secretary may establish provisions for other feed grains on the basis of a relationship to feeding value compared to corn.

The corn target price is established at $2 per bushel for 1977 and $2.10 per bushel for 1978 to be escalated thereafter according to increases in the cost of production. A corn loan level of $2 per bushel is set for 1977 and 1978 except the Secretary may reduce this level to keep U.S. corn competitive in the world market but in no event less than $1.75 per bushel. Planted acres is the basis for program coverage. The 3-to-5-year farmer loan progarm applicable for wheat is also allowed for feed grains if the Secretary decides to establish one. Disaster payment provisions for low-yield and prevent plantings are extended for 2 years and modified to extend greater coverage for those farmers hit the hardest by disaster. These provisions are the same as those applicable for wheat.

SOYBEANS

There shall be a mandatory price support for soybeans for the 1978 through 1981 crops. The Secretary shall make available loans and purchases but no minimum level shall be required. The Secretary may not require a set-aside of soybeans as a condition of eligibility for price support for any commodity.

SUGAR

The sugar price support amendment accepted by the conference is at least a true price support program. As I pointed out on the floor of the Senate on June 17, 1977, the administration's formerly proposed subsidy program was not the best alternative to support the distressed sugar industry. At that time I called for implementation of the International Trade Commission—ITC—recommendation of import quota restrictions to support the domestic price. The sugar producers could have had market price support as long ago as March 1977, if those recommendations had been adopted by the administration. The attempt at an alternative program was declared an illegal subsidy and the sugar producers are still awaiting relief. Accepting the House loan and purchase price support program was considered by the conferees to be of immediate assistance to the beleaguered sugar industry.

The conference report urges the U.S. Department of Agriculture to implement this program with dispatch even before the bill is enacted. This loan program should be instituted immediately to give some relief to the Hawaiian sugar producers who have already commenced harvesting without the benefit of this price support of 13.5 cents per pound, just as the administration announced its set-aside program before enactment of the bill.

The sugar beet and sugar cane producers deserve immediate implementation of the loan program. It has been a long time since the International Trade Commission made a finding that sugar is "being imported into the United States in such increased quantities as to be a substantial cause of the threat of serious injury to the domestic industry," and "recommend that, to prevent the threat of serious injury found to exist, a quantitative restriction in the aggregate amount of 4,275,000 short tons."

RESERVES

The new farm bill will require the Secretary of Agriculture to formulate and administer a producer storage program for wheat and feed grains by providing original or extended price support loans, repayable in 3 to 5 years. Interest on loans to producers will be based on the rate charged CCC by the U.S. Treasury. Storage paid producers will be at the discretion of the Secretary in amounts he deems appropriate to cover storage costs.

The Secretary is required to provide conditions to induce producers to redeem and market grain regardless of loan ma-

turity date when market price reaches 140–160 percent of the current support level. The Secretary may call loans at 175 percent of the current price support level.

The quantity of wheat is to be no less than 300 million bushels nor more than 700 million bushels, adjusted upward to meet commitments in any international agreements. No minimum or maximum quantities are specified for feed grains.

I feel that this holding of grain by the farmers who produced it can be a very valuable aid to more orderly marketing. Farmers will have the opportunity of obtaining a loan to help with their expenses while waiting for improved market prices. Stocks held in this manner should not overhang the market with price depressing effects and would flow into market channels as demand and prices improved.

Provision for an international food reserve of 2 to 6 million tons was defeated in the conference committee. Substituted was a statement that "encouraged" rather than "authorized" the President to enter into negotiations with other nations to develop an international system of food reserves to provide for humanitarian or emergency purposes.

Any international reserve negotiated by the President will come to the Congress for ratification. At that time I will be most interested in its provisions. I find sentiment for sharing the burden of stock holding with other developed countries such as Japan, the Soviet Union, Canada, Australia, and the countries of Western Europe. However, safeguards are essential against the possible manipulation of grain stocks held in any international reserves to hold prices of grain down whenever price recovery commences from current uneconomic levels.

I am pleased that the new farm bill includes a provision for disaster reserve. When no wheat, feed grains, or soybeans are available through the price support program at locations where such commodities are needed to alleviate distress due to natural disaster, the CCC may purchase these commodities and hay or other livestock forage as are needed. This provision coupled with the emergency feed program should help considerably in alleviating hardships suffered by farmers and ranchers where disaster strikes.

GRAIN INSPECTION

I sponsored an amendment to the farm bill to add the previously Senate-passed grain inspection bill. This amendment was needed to insure action on this much-needed legislation.

Field supervision of inspection or weighing under the U.S. Grain Standards Act shall be financed by appropriated funds instead of fees to be paid by farmers as provided in previous legislation. The new farm bill will require Federal supervision adequate to reasonably assure the integrity and accuracy of weight certificates and authorizes the Administrator of the Federal Grain Inspection Service to establish procedures as well as standards for accurate weighting and weight certificates.

This bill also removes the ban against dark hard vitreous grading for wheat that could have restricted our Latin American export sales.

WHEAT AND WHEAT FOODS RESEARCH AND EDUCATION ACT

The new farm bill establishes a council to administer research generated by an industry sponsored end product assessment. The major objective of this legislation is to authorize a cooperative program of research and nutrition education among producers, processors, end product manufacturers and consumers. The council and program are responsible to the Secretary of Agriculture.

I am pleased to have had a role in the sponsorship of this title not only because of the good that it can accomplish for wheat and wheat food products, but also because this will be an effort for the industry to help itself at no cost to the taxpayers.

FOOD FOR PEACE PROGRAM

The food for peace program (Public Law 480) is extended for 4 years with linkage of food assistance to economic development in Public Law 480 recipient countries, with a number of provisions designed to prevent program abuse, and with provisions for a greater commodity export potential.

Unfortunately, the greater export potential provided for in the new farm bill may not materialize. As I have pointed out to Secretary Bergland in a letter of August 24, 1977, the sums budgeted by the administration for Public Law 480 in fiscal year 1978 are inadequate not only from the standpoint of the need to meet food aid objectives of 6 million tons or more from the United States, but new legislative provisions will necessitate a supplemental budget request for additional funds for Public Law 480, title I, in fiscal year 1978.

The sum of less than $600 million for title I commodity costs in the administration's budget for fiscal year 1978 is grossly inadequate and becomes even less adequate under the new legislative provisions which "allows the carryover of unobligated balances of the preceding calendar year only, and provides that new spending authority for title I shall be effective for any fiscal year only to such extent or in such amounts as are provided in appropriation acts."

In view of both the food aid objective of 6 million tons or more of annual shipments and the need to stimulate farm exports, $1 billion is needed for title I commodity purchases next fiscal year.

The two most effective tools at the Secretary of Agriculture's disposal for stimulation of exports of farm commodities are Public Law 480 and CCC credits. The judicious use of these two programs coupled with effective use of Export-Import Bank loans for farm commodities can greatly reduce the cost of the new farm bill.

In view of the farm program cost reduction benefits which can accrue by export stimulation and the need to meet competition in world markets as effectively as possible, I have asked Secretary Bergland to seriously consider financing commodity exports under the Public Law 480 and CCC credit programs in the following amounts for 1978:

First, Public Law 480, title I and new title III—$1 billion worth of commodities, up from $800 million in fiscal year 1977.

Second, Public Law 480, title II—$565 million worth of commodities and ocean freight. This level, if used in conformance with the pricing provisions of the new farm bill, would provide 1.7 million tons thus assuring that the legislative minimum of 1.6 million tons would be shipped.

Third, CCC credit—$1.5 billion worth of commodities, up from $1 billion in fiscal year 1977, and only a $750 million funding level recently announced by USDA for fiscal year 1978.

Also, because of the urgent need to stimulate farm exports, have suggested that Secretary Blumenthal review the Eximbank's policy as it relates to agricultural exports. Instead of the relatively meager credits for farm exports ranging from only $69 to $85 million annually in recent years, I believe Eximbank should step up their financing of farm exports to $500 million annually. This would still be a very small proportion of total Eximbank resources which have been running from $6 to nearly $10 billion annually in recent years for U.S. export assistance. Farm exports which represent over 20 percent of total U.S. exports deserve considerably more attention from the Eximbank than is currently the case.

The best hope for improving farm prices is through increasing our share of export markets. A dollar spent on export stimulation may save many dollars in farm program costs.

DAIRY SUPPORTS AND BEEKEEPER INDEMNITY PROGRAMS

I believe the dairy part of the farm bill to be good legislation for the dairy industry. Most of the provisions that were adopted were supported by most dairy leaders.

The conferees agreed that milk would be supported at not less than 80 percent of parity through March 31, 1979. After that date, dairy price supports would be set at between 75 percent and 90 percent of parity.

Dairy price supports must be adjusted on a semiannual basis for the 4-year period ending March 31, 1981.

The conferees agreed to provide indemnity payments for dairy farmers because of contamination from nuclear radiation or fallout or residues of chemicals or toxic substances which were not used contrary to applicable regulations or labeling instructions.

The Secretary is required to issue a standard of quality for ice cream within 30 days of enactment, specifying solids, weight, and whey content in order to meet USDA standards for ice cream. The provision was put in the bill as a reaction to the proposed changes in the ice cream standards by the Food and Drug Administration.

Also, the bill extends the program, under which beekeepers are indemnified for losses sustained as a result of pesticides, to December 31, 1981.

RICE

Since enactment of the Rice Production Act of 1975, the quantity of U.S. rice exported on commercial terms, as opposed to Government financed programs such as Public Law 480, has doubled and further expansion of cash sales is promising. Current commercial rice exports are running at a level of about 1.4 million metric tons annually with a value of approximately $500 million.

The loan level for rice takes into account competitive factors in world markets, while the target price level provides a reasonable degree of income protection for the rice producers. These features are embodied in the rice provisions of the new farm bill and will hopefully result in further growth in commercial exports of U.S. rice.

The target price for the 1978–1981 rice crop will be the previous year's target price modified according to a moving 2-year average adjusted cost of production formula.

Payment limitations for rice producers will be brought into line with limitations applicable to producers of wheat, feed grains and upland cotton by 1980 since by that date the limitations for wheat, feed grains, and upland cotton will be increased up to $50,000 and the limitation for rice will be reduced from $55,000 to $50,000.

COTTON

The target price for 1978 will be at least 52 cents per pound and relates to the cost of production. The target price for 1979 and beyond shall be not less than 51 cents.

Early cotton legislation did not recognize the necessity of remaining competitive in world markets. Consequently, high loan rates not only encouraged the manufacture and sale of manmade fibers, but also "held an umbrella" over cotton production in competing cotton exporting countries. U.S. cotton has done much better in world markets since competitive market factors have been taken into account. The new farm bill recognizes the essentiality of being competitive in foreign markets. Therefore, the loan level will be set at the lower of either: First, 85 percent of the average U.S. spot price for strict low middling 1 1/16-inch cotton during the previous 4 marketing years; or second, 90 percent of the liverpool price in the first 2 weeks of October, adjusted by transportation and other factors.

PEANUTS

A new 4-year program will go into effect for peanuts with a two-tier price system and poundage quotas. The national allotment is 1.6 million acres with the minimum national poundage quotas of 1,680,000 tons in 1978, being reduced to 1,440,000 tons in 1981.

The loan on quota base peanuts is set at $420 per ton. Nonquota peanuts will be supported at levels taking into account world market prices. Thus, the new peanut program should make U.S. peanuts more competitive in world markets. Under the more rigid programs of the past, U.S. peanuts have been frequently priced out of world markets.

NATIONAL AGRICULTURAL RESEARCH, EXTENSION, AND TEACHING POLICY

I was pleased to support the provision in this bill which once again establishes the teaching of food and agricultural sciences as a priority for the USDA. I believe it is important that the USDA be responsible for research, extension and teaching in the food and agricultural sciences. My experience has shown that the USDA is the only agency in Government that is truly interested in farmers, food, agriculture, and matters relating thereto.

When legislation and funding relating to these matters are given or transferred to other agencies, they do not receive high priority.

The Department of Agriculture is designated as the lead agency for agricultural research—except with respect to the biomedical aspects of nutrition—extension, and teaching in the food and agricultural sciences, and the Secretary of Agriculture is given specific responsibilities with respect to the coordination and planning of research, extension, and teaching activities.

The bill requires the Secretary of Agriculture to establish a competitive grants program for high priority research programs. Competition for these grants would be open to all colleges and universities, and the duration of individual grants would be limited to 5 years.

The Secretary is authorized to make grants for periods of up to 5 years, without regard to matching funds, to facilitate or expand food and agricultural research which has promise of significant breakthroughs in research areas of the food and agricultural sciences and also to facilitate and expand the Federal-State research effort.

The bill establishes a program for research facility grants to support purchases of land and equipment and construction or renovation of buildings under which each State agricultural experiment station would be assured of an annual grant of $100,000 or an amount equal to 10 percent of the agricultural research funds it receives under the Hatch and McIntyre-Stennis Acts, whichever is greater.

The Secretary is required to make grants to States on a 50–50 matching basis for the purpose of construction or expansion of new or existing schools of veterinary medicine.

The Secretary is required to conduct a program of competitive grants for all colleges and universities to further education in the food and agricultural sciences.

The Secretary is required to make grants to colleges and universities for the purpose of conducting research on producing and marketing industrial hydrocarbons, gas, and other coal derivatives for methanol and methyl fuel from agricultural commodities and forest products.

The Secretary is directed to establish nutrition research as a separate and distinct mission of the Department of Agriculture and increase support to a level adequate to meet nutrition research needs.

The bill establishes a national animal health and research program and authorizes up to $25 million annually, to support continuing animal health research programs at eligible institutions and up to $15 million annually, to support research on national or regional animal health problems.

A small-farm research and extension program is to be carried out to upgrade small farmer operations.

The Secretary of Agriculture is directed to carry out a program of competitive grants for research and development on the uses of solar energy with respect to farm buildings, farm homes, and farm machinery and the uses of biomass derived from solar energy, including farm and forest products, byproducts, and residues, as substitutes for nonrenewable fuels and petrochemicals.

The Secretary of Agriculture is directed to distribute funds to State Departments of Agriculture and extension services, State agricultural experiment stations, forestry schools, and 1,890 colleges, including Tuskegee Institute, for use in establishing model farms and demonstration farms.

Provision is made for the establishment of three to five regional solar energy research and development centers in the United States, located so as to reflect the unique solar characteristics of different latitudes and climatic regions within the United States.

The Secretary is authorized to expand the operational coordination of the Department of Agriculture with agricultural research and extension activities around the world.

The bill establishes overall appropriation authorizations for the fiscal years 1978–1982, for research, extension, and Hatch Act programs.

RURAL DEVELOPMENT AND CONSERVATION

I have been concerned for several years that agricultural conservation practices have been geared too much toward shortrun concerns rather than longrun solutions. The bill specifies that financial assistance will be provided to agriculture producers for carrying out enduring conservation or environmental enhancement measures. Emphasis will now be shifted from shortrun to longrun practices and proposals I have supported for several years.

The bill amends the revised statutes to include aquaculture and human nutrition as basic functions of the Department of Agriculture.

The rural community fire protection program has been a concern of mine for several years. The bill extends the life of that program through 1980. Many excellent rural fire districts have been created in the State of Kansas as a result of the program. The bill also encourages the use of Federal excess property for rural fire forces.

The authority for the Secretary to establish multiyear set-aside contracts is extended through the 1981 crop, and livestock grazing is prohibited except as the Secretary determines is needed as a result of natural disaster.

FOOD STAMPS

The food stamp portion of the farm bill represents a fair compromise between the Senate and House food stamp bills. While the two bills differed on several provisions, there was agreement on the most far-reaching reform, which was the elimination of the pur hase requirement. Because both Houses had voted in favor of deleting that requirement, the conference centered around less controversial issues.

EXTENSION OF PROGRAM

In conference, the Senate receded to the House providing for a 4-year extension of the food stamp program. The Senate bill had extended it for 2 years. A 5-year extension was discussed in the Agriculture Committee, but lost on a 9 to 9 tie. An amendment on the Senate floor for a 5-year extension was defeated by only three votes. Both the committee and the floor votes indicate there was considerable support in the Senate for a longer extension of the program.

CAP

Coupled with the House provision for a 4-year bill was a cap on food stamp expenditures. The cap was designed as a shield against runaway program growth which House Members feared would occur following the removal of the purchase requirement. Although the Senate bill contained no similar provision, the House conferees had wide support for the cap among their colleagues, and were not willing to compromise or recede. Therefore, the Senate conferees agreed to recede.

CASH-OUT

The House bill permitted states the option of cashing out food stamps for elderly and disabled recipients. This option was not seriously discussed in the Senate Agriculture Committee, nor was it brought up on the floor. The House voted to delete their provision, largely because the latest cost estimates were higher than the original figures.

WORKFARE

Mandated in the House bill was the establishment of workfare pilot projects in every State. The purpose would be to test the feasibility of requiring recipients to work in return for their food stamp benefits.

The Senate conferees felt that if such a project was mandated in every State, it would surpass the definition of a pilot project. A compromise agreement was reached to set up 2 pilot proje:ts in each of the 7 USDA regions, for a total of 14 project sites, rather than 50.

In addition, certain CETA provisions were adopted to insure that workfare recipients do not replace salaried workers.

SHELTER

The two bills were inconsistent in their treatment of the shelter deduction. The Senate bill allowed for excess shelter costs to be considered when determining a recipient's eligibility for food stamps. The House permitted shelter costs to be considered in determining a person's benefits, but only after he had been declared eligible to participate in the program.

In other terms, the maximum income allowed under the Senate bill was $10,600. This would apply only to working families who could claim both the dependent care and the shelter deductions. The maximum allowed under the House bill was $9,300, because it did not permit a family to count the shelter deduction when determining their eligibility. A compromise was accepted which allows recipients to determine eligibility by claiming a deduction for either dependent care or excess shelter, or a combination of the two up to $75.

Although this provision cuts off all families at the $9,300 level, there is now more flexibility than was contained in the House bill. Recipients in particularly the Northeastern part of the country tend to have high shelter costs. Under the compromise, they will have a greater opportunity to participate in the program than would have been allowed under the House bill.

STUDENTS

Finally, the Senate conferees agreed to provisions in the House bill which place stricter requirements on students. To qualify for stamps, students have to be enrolled at least half-time in an institution of higher learning. In addition, they must be employed a minimum of 20 hours a week, or registered for work. Exceptions to this requirement are allowed in only a few specific instances.

These are the primary changes that were made to the food stamp program during the conference. Other smaller modifications were made, but there was general agreement among the Senate conferees on these issues. I support the conference food stamp bill, for it is an objective reconciliation of the differences contained in each bill. I hope that my colleagues will be equally satisfied, and will vote to accept it.

CONCLUSION

Finally, I must emphasize the gravity of the economic crisis in agriculture: Farm prices are at the lowest ebb since 1933; financial institutions have extended credit to farmers to their limits trying to finance them through this depressed period; farm and machinery equipment manufacturer employment is down about 20 percent from last year. In fact, what we have is an economic crisis in rural America that is extending to the urban population as well, compounding our national unemployment problems. This bill provides for a good farm program, if administered in the interest of the farmers, but should not be looked upon as a panacea. I have reservations about the reserve section, particularly regarding how stocks once accumulated are fed back into the market and at what price levels. I would not like to see release prices become ceiling prices. Low farm prices are the major problem. While only improved demand and consequent higher market prices can cure the current farm crisis, this bill, properly administered, can help in alleviating the distress that is becoming more and more widespread in rural America.

Mr. President, I want to also stress the point made in the exchange between the distinguished Senator from Hawaii (Mr. MATSUNAGA) and the distinguished Senator from Georgia, the chairman of the committee.

It is the intent of the conferees that we provide relief for sugar producers in the great State of Hawaii. That has been clarified or underscored, at least, by the comments made by the distinguished Senator from Georgia in response to the question posed by the distinguished Senator from Hawaii.

In addition, in my remarks here, I made an effort to underscore how we interpreted that provision and I hope it will be helpful to the producers in that State.

The PRESIDING OFFICER. The Chair would like to intercede at this time to thank the Senator from Kansas for his part in the effort to save the Hawaiian sugar industry.

Mr. DOLE. I thank the Chair.

Mr. TALMADGE. Mr. President, will the Senator yield?

Mr. DOLE. I yield.

Mr. TALMADGE. Mr. President, I understand that the leadership has held some Senators here, telling them there would be a yea-and-nay vote. So far as the Senator from Georgia is concerned—I am sure this is shared by the Senator from Kansas—I would just as soon have a voice vote. But in view of the leadership's pledge, I urge the attachés of the Senate to call and look around in the corridors and get 11 Senators on the floor so that we can order the yeas and nays on the bill.

I thank the Senator for yielding.

Mr. DOLE. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. DOLE. Mr. President, Senator HUMPHREY made the legislative history at the House-Senate conference regarding the sugar provisions. I believe that he communicated with the Senator from South Dakota (Mr. MCGOVERN) to be sure to present the facts as Mr. MCGOVERN knows them regarding the conference.

Mr. McGOVERN. Yes, he did. It is an honor for me to have been asked to fill his shoes in this matter. I shall endeavor to reflect the understandings reached by the conferees.

Mr. DOLE. The conferees from both sides of the Capitol agreed unanimously, did they not?

Mr. McGOVERN. Yes.

Mr. DOLE. What does the legislation provide?

Mr. McGOVERN. Probably the best way to get the final provisions on the record is to read from the price provisions of the sugar legislation itself. It is not very long:

(f) (1) The price of the 1977 and 1978 crops of sugar beets and sugar cane, respectively, shall be supported through loans or purchases with respect to the processed products thereof at a level not in excess of 65 per centum nor less than 52.5 per centum of the parity price therefore: *Provided*, That the support level may in no event be less than 13.5 cents per pound raw sugar equivalent. In carrying out the price support program authorized by this subsection, the Secretary shall establish minimum wage

rates for agricultural employees engaged in the production of sugar.

(2) Notwithstanding any other provision of the law, the Secretary may suspend the operation of the price support program authorized by this subsection whenever he determines that an international sugar agreement is in effect which assures the maintenance in the United States of a price for sugar not less than 13.5 cents per pound raw sugar equivalent.

Certain factors are obvious as to how the conferees, including the author of the sugar amendment, Representative DE LA GARZA of Texas, determined this legislation should be implemented. First, there was agreement that the sugar products acquired, if any, would not be sold at less than 105 percent of the support price plus reasonable carrying charges. Second, there is the express provision that the Secretary of Agriculture could suspend the operations of this program when he determines that an ISA is functioning to effectively maintain a raw sugar price of at least 13.5 cents per pound. Notice we did not say establish and maintain for the ISA. Under the proposed ISA, there is provision for the acquisition and maintenance of a multimillion ton raw sugar stock—to which the United States will be a major financial contributor. Sugar definitely is storable without excessive loss through deterioration or storage and without excessive cost for storage for the time required to permit its disposition without substantial impairment of the effectiveness of the price support program. Obviously, the maintenance of a multimillion ton stock assumes storability. Also, there are several million tons of raw and refined sugar in storage in the United States now.

Mr. DOLE. However, in the conference, the conferees agreed that no outlay of CCC funds will be needed since there would not be any acquisition of sugar products, did they not?

Mr. McGOVERN. Yes, the conferees agreed that the executive branch should, as soon as this bill becomes law, use now existing legal authorities to impose an additional import duty and/or import fee, which when added to the current import duty will enable raw sugar to sell in the domestic market at not less than the effective support price. As a matter of fact, we even recommended that USDA under existing authority implement this program of higher duties and an import fee as soon as possible even before the act is signed into law. Only, if necessary, will other import management authority provided under section 22 of the Agricultural Adjustment Act of 1933 be used.

Mr. DOLE. The conferees pointed out that USDA currently has the authority to implement the sugar program required by this amendment. We recommended that the implementation be carried out as soon as possible even before the farm bill is signed into law. Nothing has been done by USDA so far as I know, despite our recommendation. I was pleased that USDA announced its set-aside intention for wheat in advance of passage of this legislation, but I am sorely disappointed that despite our express recommendation, USDA failed to act on sugar where authority already exists to first, announce a price support program for sugar beets and sugar cane and second, utilize the emergency import management provisions of section 22 of the Agricultural Act of 1933.

Mr. McGOVERN. The Senator is right. Actually, these actions should be taken immediately. Sugar imports are pouring into the United States. The Nation is losing import fee revenues. Moreover, the USDA is missing an opportunity to assure the prompt and smooth implementation of the sugar amendment. The conferees were clear in this matter. I do not understand the delay.

Mr. DOLE. Can the Senator tell us what understanding there was regarding the implementation of this legislation between Senator LONG and administration officials?

Mr. McGOVERN. Probably the best way to do this is to read the letter from Senator LONG to the chairman of the Senate Agriculture Committee, Senator TALMADGE. Senator HUMPHREY followed closely this compromise of Senator LONG. The letter reads as follows:

COMMITTEE ON FINANCE,
Washington, D.C., August 3, 1977.

The Honorable HERMAN E. TALMADGE,
Chairman, Committee on Agriculture and Forestry, U.S. Senate, Washington, D.C.

DEAR HERMAN: As a result of discussions earlier today with various representatives of the Administration, it seems to me a good compromise on the sugar issue might be the following: Accept the de la Garza amendment with an amendment which lowers the level parity support from 55% to 52½%. No other change would be made in the de la Garza amendment.

The statement of managers would explicitly state that the Department of Agriculture would immediately institute an import management program that would achieve a domestic price level sufficiently in excess of the 52½% parity level to insure that there shall be no acquisition of sugar by the Government.

Additionally, statement of the managers would outline that the import management program, or levies to accomplish the goals of the amendment, would be administered by the U.S. Department of Agriculture.

The statement of managers would further make clear that an International Sugar Agreement which has been approved by the Congress (either as a treaty or as a trade agreement) which is implemented and which achieves the price objectives of the de la Garza amendment as modified, would take precedence over this amendment.

This compromise falls between what the Administration, under threat of veto, is offering and what the domestic industry and the Congress feel is fully justified. Therefore, it should be acceptable to reasonable men as a fair accommodation and, in my opinion, should not result in a veto of the Farm Bill.

With every good wish, I am
Sincerely,

RUSSELL B. LONG,
Chairman.

Mr. McGOVERN. The U.S. representative to the International Sugar Agreement meeting in July 1977, has proposed on behalf of the United States a world price minimum/maximum range of 11 to 21 cents per pound for raw sugar at export points. Based on the current import duty plus insurance, shipping and other import charges, the minimum import price would be at least 13.5 cents. Thus, the new sugar program is compatible with the U.S. proposal under the ISA and the United States can move from the new domestic sugar program to the ISA with practically no disruption in marketing.

Mr. DOLE. Mr. President, the Senator from Kansas urges the adoption of the farm bill conference report now before us. It is the product of long hours of debate and compromise, and deserves the support of the body.

Over the course of this legislative effort, I have often spoken of the need for reform of the food stamp program. I believe this bill reflects sound and responsible reform of a program which is important to the well-being of millions of Americans. It embodies much of what the Senator from South Dakota (Mr. MCGOVERN) and I have been advocating for the past 2 years.

EPR

The heart of the bill is the way in which it improves eligible people's access to the program. In the past, many eligible persons were shut out of the program because of the purchase requirement, and were denied important aid. S. 275 helps to break down the biggest programmatic barrier to participation by eliminating the purchase requirement. Senator MCGOVERN and I have long contended that this had to be the cornerstone of legislative reform, and I am pleased it was accepted.

WELFARE REFORM

By eliminating the purchase requirement, we are taking the first step towards true welfare reform. We are not completely revamping the food stamp program or trading it in for something new and untested.

Instead, we have taken an existing program, studied its weaknesses, and proposed significant changes to allow for broader participation by those who are eligible. Because of the purchase requirement, many of the deserving poor have been forced out of the program because they lacked the money needed to buy their allotment of stamps.

With the removal of this obstacle, food stamp benefits will be extended to all who legitimately qualify for them. I think this is an important component of true welfare reform. We have provided for better assistance to those who deserve a helping hand. At the same time, we have worked within the existing program to target nutrition assistance to the poor, while cutting off higher income persons who have misused the program in the past.

CAP

The food stamp title of the bill also provides a "cap" or ceiling on food stamp appropriations. The bill authorizes to be appropriated not in excess of $5,847,600,000 for fiscal 1978, $6,158,900,000 for fiscal 1979, $6,188,600,000 for fiscal 1980, and $6,235,900,000 for fiscal 1981. The bill specifies that allotments in any fiscal year may not exceed the amount appropriated for such fiscal year, and that allotments must be reduced if this is necessary to comply with this provision. As a

result, if all funds appropriated for a fiscal year were being used in that year, any carry-over funds that might be available from prior years could be used only for administrative costs, and could not be used to pay for food stamp benefits to eligible households.

When this issue arose in conference, I offered alternate language, drafted by Chairman FOLEY, that would have adjusted the amount of the CAP up or down in accordance with fluctuations in food prices and in the unemployment rate. The alternate language would also have prevented any carryover funds from being used in any year, if such funds would result in a larger expenditure in that year than the appropriation ceiling for such year. Under the conference bill, carryover funds can bring overall expenditures above the appropriation ceiling if the additional amount is used solely for administrative costs and not for benefits. I believe the alternate language was preferable, as it would have related the amount of the ceiling to the performance of the economy.

ISSUANCE OF STAMPS

In several ways, the program will be made open and more responsive to participants. The Secretary of Agriculture is required to set standards for locations and hours of issuance and certification. While we did not specify the standards that he should adopt, our intent is clear: recipients should be able to reach offices conveniently, and offices should be open sufficient hours to make those visits purposeful. For example, just as with the work registration requirements, applicants should not have to travel several hours round trip to apply or obtain their food coupons, nor should working people have to take time off from work to apply, or get their assistance.

In addition to these requirements, the conferees were agreed that special certification methods be available to the elderly, the handicapped, and others who cannot appear in person at the office.

The bill provides that the Secretary establish two sets of certification standards: First, standards for points and hours of certification and issuance, and second, standards under which States shall provide for telephone contact by, mail delivery of forms to, and mail return of forms by, and subsequent home or telephone interview with, those persons who are unable to appear in person at a certification office or through a representative—because of their age, a physical or mental handicap, or transportation difficulties and similar hardships.

We also required in the bill that stamps be provided on an expedited basis to those recipients in immediate need. We would expect that the Secretary would make sure that food stamps are provided promptly to those households meeting the criteria for such emergency assistance.

DEDUCTIONS

We simplified the itemized deductions by providing a standard deduction, a deduction for work-related expenses, and a combined dependent care and/or shelter cost deductions for the same expenses currently permitted. This modified standard deduction should help to streamline the certification process.

A household in the 48 States and the District of Columbia may claim a dependent care deduction of up to $75 a month, a shelter deduction of up to $75 a month, or deductions for both dependent care and shelter so long as the combined deductions do not exceed $75 a month. The shelter deduction shall be the amount by which a household's shelter costs exceed 50 percent of the household's income after all other deductions—including the dependent care deduction, if claimed. In computing the shelter deduction, the same shelter costs will be allowed as are allowed under current regulations, and no additional costs will be included.

For Alaska, Hawaii, Guam, Puerto Rico, and the Virgin Islands, the maximum deduction for shelter, or dependent care, or both, shall be an amount determined by the Secretary in accordance with the best available information on the relationship of the actual shelter costs of food stamp recipients in those areas to such costs in the 48 contiguous States and the District of Columbia.

CERTIFICATION

We have further simplified administration by requiring that households be certified for 3 months. Eligible elderly households could be certified for a year, if possible, so as to end the constant recertifications that plague program administration. An exception to this 3-month-or-longer rule would be those households, such as migrant farmworkers, who have unstable incomes or who anticipate receiving income soon after arriving in a project area, but not soon enough to meet their immediate needs.

Households are required to report, on a form designed or approved by the Secretary, changes in income or household circumstances that the Secretary deems necessary to provide accurate determinations. The Secretary would be authorized to establish standards setting forth which changes must be reported, and in how many days.

INDIANS

We allowed recipients on Indian reservations to choose between the commodity food program and the food stamp program, and stipulated that the former be improved. Thus, indigent Indian people will have a choice of the food program that best suits their specific situation, and which would provide fairly comparable benefits.

An Indian tribe shall receive training and technical assistance if it so requests and if the Secretary has determined that first, the State is failing to administer the program properly, and second, the Indian tribe is likely to be found capable of administering the program if it receives the necessary training and assistance.

FRAUD

While improving access to the program, we have also taken steps to tighten up the program to meet criticisms of the past few years.

First of all, we have provided for strict and immediate penalties for fraud. Upon the finding of a State agency, individuals found guilty of fraud will, for the first time, be disqualified from participation for a period of 3 months, with an additional penalty of 6 to 24 months if found guilty and assigned this additional penalty by a court. We expect that the Secretary will establish careful standards for fraud to differentiate between fraudulent activity and unintentional errors.

In providing for the disqualification of an individual household member for fraud, it is not intended that the household members remaining eligible benefit from such disqualification by having the value of their allotment increased.

We have made the work registration requirements stricter. Not only did we disqualify households in which the head has voluntarily quit a job without good cause, we also imposed a job search requirement. Rather than mandate a uniform job search, we left the implementation of that provision to the Secretary. We expect him to be guided by sound, reasonable judgment.

WORKFARE

Finally, we compromised with the House and accepted a pilot project to test the advisability of making unemployed persons work in return for food stamps. This pilot authority extends for 18 months after enactment of the bill, at which time we expect a report as to its effectiveness. At that time, we can take a good look to determine if, in fact, it does what its proponents contend.

There shall be no USDA-cost sharing in the costs of providing the CETA rights and assurances, or other "workfare" administrative costs—except for the cost of providing food stamp benefits to complying households or household members. These costs shall be borne by the political subdivisions or CETA prime sponsors who "employ" those recipients who are performing work in return for their food stamps.

The funds specifically provided for pilot projects—one-fourth of 1 percent of the previous year's appropriation—do not include any benefits or allotments that might be distributed to eligible households under such projects.

75 PERCENT COST-SHARING

The 75 percent cost-sharing is not limited to expenditures incurred by the State agency. It shall also apply to costs borne by other State and local agencies in investigating and prosecuting fraud, such as the costs of the salaries of prosecutors for the time they spend on food stamp fraud matters.

MAINTENANCE OF EFFORT

The maintenance of effort provision—section 8(b)—encompasses assistance provided by a State or local government to serve individuals enrolled in a drug addiction or alcoholic treatment and rehabilitation program. Such assistance may not be reduced because of the receipt of allotments by individuals enrolled in such treatment and rehabilitation program.

POST OFFICE ISSUANCE

The conferees intend that the general arrangements between the Postal Service and the U.S. Department of Agriculture, regarding Post Office issuance of food stamps, be subject to the approval of the

President. They do not intend that the President have to approve the entry of each individual post office into the food stamp program.

SUMMARY

I hope the Secretary will make every effort to implement this new program as soon as possible. My understanding is that the elimination of the purchase requirement will not necessitate massive changes at the local level, and should not take too long to implement.

Mr. President, this conference report is the product of responsible and dedicated legislative efforts by Members of both Houses. I support this food stamp bill and join the Senator from Georgia (Mr. TALMADGE) in recommending the report to this body and urging its immediate adoption.

Mr. President, there is another new section of the bill, the so-called Wheat and Wheat Foods Research and Nutrition Education Act, title XVII. For the sake of legislative history, I ask unanimous consent to have printed in the RECORD a brief outline of how this section will operate and how it will impact agriculture and those who may be affected by it.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SUMMARY OF MAIN FEATURES OF WHEAT AND WHEAT FOODS RESEARCH AND NUTRITION EDUCATION ACT, TITLE XVII, FOOD AND AGRICULTURE ACT OF 1977

This title is drafted as enabling legislation and authorizes a cooperative program of research and nutrition education among wheat producers, processors, end product manufacturers, and consumers. Nutrition education programs will be conducted to disseminate information relating to the nutritional benefits or economic value of wheat, processed wheat, or end products resulting from research; promotional activities based solely on the desirability of wheat, processed wheat or end products will not be included. Such nutrition education can be carried out both within the United States and in international markets. Funds for the program will be generated from assessments of up to 5 cents per hundredweight on commercial wholesale end product manufacturers at the time they purchase "processed wheat" (including intracompany transfers of processed wheat between related companies or divisions of the same company) for use in "end products."

The terms "processed wheat" and "end product" as used in the Act are mutually exclusive. An "end product" is defined as a product which contains "processed wheat" as an ingredient and which is intended as produced to be used for consumption as human food, notwithstanding any incidental preparation which may be necessary by the ultimate consumer. "Incidental preparation" means such actions as thawing frozen bakery products or baking brown-and-serve products, so that frozen cakes, breads, or bread doughs, brown-and-serve rolls, etc., would be considered "end products" and, therefore, would be subject to the assessment.

On the other hand, "processed wheat" means the wheat-derived content of substances such as flour, self-rising flour, and cake mixes, which are not normally consumed as human food in that form, but rather used as ingredients of "end products".

Products such as graham crackers, granola, or other substances which may be consumed in their present form or used as an ingredient of another end product are within the definition of end product. Therefore, the assessment on the processed wheat purchased for use in the manufacture of such substances would be paid by the end product manufacturer who first manufactures them into a substance which can be consumed as human food. No further assessment, however, would be due from subsequent end product manufacturers purchasing such end products for use as ingredients of other end products.

The assessment is payable, at intervals determined by the Secretary, directly to the Wheat Industry Council on the amount of processed wheat purchased by end product manufacturers for use in the manufacture of end products. Therefore, for example, when a cake mix manufacturer purchases flour for use in the manufacture of a cake mix, whether such mix is to be sold directly to ultimate consumers or to commercial bakers, no assessment will be payable because cake mix is not an end product and he is not an end product manufacturer.

When a commercial baker buys flour, a mix, or any product containing processed wheat for use in producing an end product, he will be required to pay the assessment because he is an end product manufacturer. In order to allow end product manufacturers to calculate the assessment due, persons selling products containing processed wheat in combination with other ingredients (e.g., cake mixes) to end product manufacturers must disclose to them the wheat-derived content of such products. However, when persons buy cake mix, flour, or another product containing processed wheat for their own personal, family or household use, no assessment is payable because such persons are specifically exempted from the definition of "end product manufacturer" Persons who buy processed wheat and produce end products which are consumed on the premises where produced are also excluded from the definition of end product manufacturer. Thus, hotels, restaurants, and institutions, to the extent that they produce end products consumed on the premises, will not be subject to any assessment.

The concept of the legislation follows that of previous marketing order programs. The programs it authorizes will be administered, under the oversight of the Secretary of Agriculture, by a twenty-person Wheat Industry Council, composed equally of producers, processors, end product manufacturers, and consumers appointed by the Secretary from nominations submitted by organizations certified eligible by the Secretary. As in other marketing order programs, a referendum procedure is required prior to the adoption of an order and will be conducted among eligible end product manufacturers (those who will be subject to the assessment). A "voter registration" procedure is required and all voters will be required to certify (1) the amount of processed wheat contained in the end products they manufactured during a representative period defined by the Secretary, and (2) that they are not within the retail baker exemption of section 1607 of the Act. Votes must be cast by at least 50% of the registered end product manufacturers with approval favored by not less than two-thirds of those voting or a majority if such majority represents two-thirds of the processed wheat contained in the end products manufactured by those voting.

Upon approval of the order, the Council would develop plans or projects in accordance with the purposes of the bill and an annual budget, both of which would be submitted to the Secretary for his approval. A summary of the budget, including a general description of proposed research and nutrition education programs, would be published in the Federal Register. Such publication is only intended for notice-giving purposes and does not constitute a "rulemaking" procedure within the meaning of the Administrative Procedure Act. End product manufacturers would have 60 days thereafter in which to elect, in writing, to reserve the right to seek refunds for the following year. Refunds of the assessment would only be available to those who made such an election on an annual basis.

Retail bakers are specifically exempted from all the provisions of the Act as a matter of statutory right. The effect of this exemption is to free retail bakers from all obligations under the Act, including payment of the assessment, voting in the referendum, or serving on the Council. Retail bakers are defined as end product manufacturers who sell end products directly to ultimate consumers. End product manufacturers which derive less than 10% of gross end product sales revenues from sales to ultimate consumers are excluded from the definition so that wholesale bakers who do some minor retail sales will remain subject to the Act. End product manufacturers which derive 10% or more of gross food sales revenues from sale of products manufactured or produced by others are excluded from the definition of retail bakers so that large chain grocery store bakery operations will remain subject to the Act.

To receive the benefit of the exemption it would only be necessary for any end product manufacturer to demonstrate to the Secretary, if so requested: (1) that it does sell end products directly to ultimate consumers; (2) that it derives 90% or more of its gross end products sales revenues from such sales to ultimate consumers; and (3) that it does not derive 10% or more of its gross food or food products sales revenues from the sale of such products manufactured or produced by others. It is not expected that the Secretary would use his authority to require retail bakers to prove eligibility for the exemption except in rare instances.

All administrative costs of the Secretary in conducting the referendum and in administering the order will be reimbursed from assessments, meaning that the program will be totally self-supporting and be conducted, after approval of the initial referendum, at no cost to the government.

Enforcement of the Act and of the collection of the assessment would be the responsibility of the Secretary. A civil penalty of $1,000 for violating the Act is provided and would be levied through the courts. Delinquent assessments would be collected through civil suits brought by the Justice Department.

The order could be suspended or terminated by the Secretary or upon a referendum approved by a majority of the end product manufacturers subject to the order and voting in the referendum, or by end product manufacturers who produced end products containing more than 50% of the total processed wheat contained in all the end products manufactured by those voting. Otherwise, the order would continue indefinitely.

Mr. DOLE. Section 1201 of the Food and Agriculture Act of 1977, authorizes the Commodity Credit Corporation, upon the request of the Public Law 480 recipient country, to act as its agent in arranging the purchase and shipment, or both of title I commodities. This is not an amendment to put the shipping or purchasing agent of integrity out of business. Any agent who receives his contract in a fair manner, who has no conflicting interests and who renders honest and efficient professional services need not fear that the Public Law 480 country will cancel his service and turn to the USDA for shipping or purchasing functions.

Honest and efficient shipping and purchasing agents who operate in a businesslike and ethical manner offer services to Public Law 480 recipient countries that can greatly facilitate Public Law 480 title I exports.

It is intended that Public Law 480 recipient countries would not terminate the services of a shipping agent unless one or more factors such as the following prevailed:

First. There was reason to doubt the agents business integrity, honesty or ethics of his practices;

Second. There were indications that the agent was in a conflict of interest situation detrimental to the purchasing country or the fair and equitable operation of the Public Law 480 program;

Third. There was evidence that the agent's services were obtained through congressional or administrative pressure or through payments of a kickback or other scheme or device;

Fourth. There were indications of favoritism toward certain commodity suppliers or shipping companies or other program abuses, or;

Fifth. The agents services were judged to be unsatisfactory by the Public Law 480 recipient country.

Thus, the purpose of this provision is not to infringe on private enterprise but rather to insure that private shipping agents obtain their contracts from Public Law 480 countries in a fair manner and that they serve the Public Law 480 countries with whom they have contracts in an honest, businesslike, ethical, and legal manner.

Mr. President, this is aimed at the so-called Tongsun Park area. It is an effort to clarify and to make certain that if any wrongdoing did happen, it will not happen again. It is not aimed at honest and efficient shipping and purchasing agents.

Mr. President, there is some confusion as to how the target price works. I think many farmers may be under the impression that if the market price in their area is $1.90 and the target price is $2.90, they are going to receive $1 a bushel for their deficiency payment for 1977 wheat. That is not the case. It does not work that way.

Understanding any farm program is difficult. Our farmers are eager to get the details of the provisions of the farm bill we are approving today. Agricultural editors and farm writers throughout the Nation are a great help in converting the legal language of bills, laws, and Government regulations to understandable plain English.

An example of such talent is demonstrated in a recent article in the Wichita Eagle-Beacon, by John Bailey, that publication's Agribusiness editor, headlined, "Wheat Target Price Not What It Seems." Through interviews and actual examples, Bailey explains that farmers do not actually get the $2.90 per bushel target price or the $2.25 support loan levels that are provisions of the bill. As he explains, in many cases, the farmers target price will really result in about $2.54 for his whole crop, and the effective loan level is only $1.95 or less. This information will be helpful to farmers and citizens throughout the Nation, and I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEAT TARGET PRICE NOT WHAT IT SEEMS

(By John Bailey)

Even if President Carter accepts the 1977 wheat target price of $2.90 per bushel, Roger Lemon will be lucky to get $2.54 per bushel for the wheat he harvested near Wichita this year.

Across the nation, some farmers could net more than $2.90 per bushel. And some could get government money for wheat they didn't plant.

Confusing? You bet. And for farmers who don't understand the target price program, it's often disappointing, said Jim Searls, Sedgwick County executive director of the Agriculture Department's Agricultural Stabilization and Conservation Service (ASCS). ASCS administers the program.

Like county executive directors across the state, Searls has been flooded with calls from farmers who think they will receive $2.90 per bushel for their wheat. After all, that's the figure quoted in the new farm bill.

The farm bill has not cleared Congress. House and Senate conferees Friday completed the job of hammering out compromises between the House and Senate versions, but final congressional action will not come until after Congress reconvenes on Sept. 7.

There's a lot more to farm legislation than that $2.90 figure implies, Searls said. There is a system of historical wheat acreage, allotments and yields, a national average market price, a commodity loan level and a wheat marketing year (June 1 through May 31). All are factors in determining how much money a farmer gets from the government.

Using Lemon as an example, this is how the program would work.

This year, Lemon grew wheat on land in Sedgwick and Sumner counties. Under government allotments established during the early 1950s and since updated, Lemon could plant 219.5 acres in Sedgwick County and 106.3 acres in Sumner County.

On his Sedgwick County acres, ASCS assigned him a yield of 39 bushels per acre. This represented an expected average, Searls said. It was based on the condition and location of his land and on past yield records. On the Sumner County acres, Lemon was assigned a yield of 35 bushels per acre.

By multiplying his allocated acreage in each county by its expected yield, Lemon determined that he could produce 8,561 bushels of wheat in Sedgwick County and 3,720 bushels in Sumner County. Only the wheat grown under these allotments is protected by price support programs, Searls said. That was a total of 12,281 bushels.

In recent years, wheat prices were high and price-support programs were dormant. The government encouraged farmers to make their own decisions about how much grain to plant.

With no restraints on his planting, Lemon decided to plant more than his allotment. This summer, he harvested 271 acres in Sedgwick County and 152 acres in Sumner County. That gave him about 14,805 bushels of wheat to sell, or 2,524 bushels more than the government would cover under the target-price program.

Wheat production is only one factor involved in the program, Searls said. To trigger payments, the national average market price for wheat must be below the target price for the first five months of the wheat marketing year (until Nov. 1).

Thus, if the target price was $2.90 and the national average market price $2.50, producers would receive the difference of 40 cents on each bushel in their allotments, Searls said. And the payments would be made whether or not any wheat was produced on that allotment, he said.

But there are limits on the payments. If the national average market price was below the national average wheat loan level, another price-support mechanism in the farm program, the loan level would become a "floor" on payments.

For example, the national wheat loan level is now $2.25 per bushel. The national average market price for wheat was $2 on July 15, according to USDA figures. Any deficiency payments made to farmers under these circumstances would be limited to the difference between the target price and the loan level, Searls said.

If the current national average wheat price was to hold so that the average for the first five months was below the loan level, and Lemon sold his wheat at current cash prices of about $2 per bushel, this is what would happen:

Lemon would receive a deficiency payment of 65 cents per bushel, the difference between the $2.90 target price and the $2.25 loan level, on the 12,281 bushels from his allotment. That would be about $7,983.

For the 14,805 bushels he sold on the market for $2 per bushel, he would get $29,610, for a total of $37,593. That means Lemon's wheat would bring about $2.54 per bushel.

There is another limitation on the amount of money Lemon could collect in target price deficiency payments. Regardless of the size of his allotment or the number of crops he harvested, the government limits to $20,000 the amount any individual can collect this year through the target price program.

There are a number of pitfalls in the target price program, Searls said. Foremost is the national average market price. The government doesn't distinguish between wheat types when computing its average price.

Some wheats usually command premium prices over others. The durum wheat grown in north-central states and the White wheat grown in the Pacific Northwest command premiums under normal conditions, Searls said. That tends to bring up the national average price, to the detriment of Kansas Hard Red Winter wheat producers. In mid-April, the national average price paid for wheat was $2.41 per bushel, while Kansas producers received an average of $2.14, USDA reported. That difference narrowed to $2 nationally in mid-July versus $1.92 in Kansas.

Another pitfall confronting farmers is that the average national price must stay below the target price for five months before deficiency payments are triggered, Searls said. If a farmer sells his wheat at a low price during the first couple of months, and the average market price rises, the farmers could be out the deficiency payments.

A third problem is the link to the loan level, Searls said. The price can continue to decline below the loan level without triggering additional payments to farmers.

There is logic to the loan level floor, however, because the loan is, itself, a price-support program. A farmer can borrow money from the government under the loan program, using his grain as collateral.

If grain prices fail to rise enough during the 11-month loan life to suit the farmer, he can leave his grain with the government and keep the money.

But the loan level is similar to the target price. What a farmer sees is not necessarily what he gets. The national average loan level is $2.25 per bushel for wheat. But it differs from county to county depending on the costs of transporting grain from the county to a central grain market, or terminal.

In Sedgwick County, the loan level is $2.20 per bushel, Searls said. But a farmer must

pay one year's storage in advance to get a loan. He also must pay loan fees. And, if he repays the loan and redeems his grain, he must pay 6 per cent interest on the money he borrowed. He doesn't pay interest if he leaves his grain with the government, Searls said.

By the time a farmer has paid his storage charges and loan fees, he nets about $1.95 per bushel in Sedgwick County, Searls said. That amount varies from county to county.

The advantage of the loan is that a farmer can get operating cash while waiting for higher grain prices. And if grain prices skyrocket following the first five months of the marketing year, the farmer could collect deficiency payments and sell his grain on the market for the going price.

But grain market analysts say that in light of expected bumper world grain crops this year, the likelihood of a significant grain price increase is remote.

So the crucial issue confronting farm policy markers is whether wheat farmers can survive with the $2.90-per-bushel target price.

Mr. DOLE. Mr. President, today I received the September issue of the Farm Journal. It contains a particularly good editorial calling attention to the good provisions of the bill and some cautions about other provisions of the bill, depending on how it is administered. I ask unanimous consent that this editorial "New Farm Bill—A Mixed Bag" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW FARM BILL—A MIXED BAG

Like many farmers, we have feelings of ambivalence about the new farm bill.

We commend the bi-partisan group in Congress which pushed through the financial relief many farmers desperately need. But at the same time, we see in this bill many of the old, familiar pitfalls of the past:

Target prices high enough to help hard-pressed farmers are high enough to make others overproduce.

If the Secretary cuts acreage in the wrong way to bring supply in line with demand, farmers will drop out of the program and overproduce anyway.

We fear Congress had mandated loan rates which will allow other countries to take our export markets.

In other words, we are back in a government-administered market. It will take extremely able administration, plus a little luck, to prevent another prolonged build-up of surpluses like that of the 1960s.

But first things first. This bill should put money into the hands of wheat farmers yet this year—and that's none too soon for many of them. Farmers must have a safety net, we said in this space in March 1975, and we explained why:

"All-out production (which consumers were asking for) will mean a big crop and disastrous prices one of these years. With the heavy debt load that many farmers now carry, with the tremendous costs of producing a crop, and with the political nature of world grain markets, the risks are just too great for farmers to bear alone—even for a single year."

The year just past proved to be that year for wheat growers. And judging from the big corn crop that's shaping up, the marketing year just beginning may be equally fateful for feed grain producers. Some officials estimate that the new bill could cost the Federal Government as much as $5.5 billion in target price and loan operations during the next year. That's not unreasonable for an industry which grosses over $100 billion annually. Besides, more than half will be paid back.

The biggest cost to farmers and to the nation will come in the market place if this bill once again fails to bring supplies back into line with export and domestic demand. And that's very possible unless the weather intervenes or unless the USDA does a particularly astute job of administration. Targets of $3.05 for wheat and $2.10 for corn next year are high enough to make money for many growers. USDA officials admit that if they cut acreage by as much as 30 percent, it would reduce income so much that a lot of farmers would drop out of the program entirely. Well, the bill is still flexible enough that the Secretary can raise the ante and "bid" additional acres into the set aside. We hope he does so.

He may have a problem, too, with milo and barley. To entice more land out of wheat, Congress raised the 1978 targets on milo to $2.39 per bushel and barley to $2.33. That throws both out of whack with corn in relative feeding value. So the USDA may have to make deeper acreage cuts for these crops than for corn.

But the level of the loan rates worries us even more. Some farmers seem to feel that whenever wheat and feed grains sell on world markets at prices below their own cost of production, as wheat has been doing the last several months, we should just stop selling overseas. But that's not realistic when over half of our wheat has been exported the last five years.

We have to meet the world price, or our wheat just piles up and sits there. That was the whole point of the target price idea: To keep the loan rate low enough to be sure our crops are always competitive, yet keep targets high enough so our farmers don't go broke.

Of course, the bill gives the Secretary the power to lower loan rates. But it still establishes an absolute floor of $2 for wheat and $1.75 for corn. Cotton growers have learned the folly of loan floors. That's why they asked for and got a loan rate that is 85 percent of the four-year average price in U.S. spot markets or 90 percent of the Liverpool, England, price, whichever is lower. They've had enough of watching foreign growers and synthetic producers crawl in under our price floors.

You fared well in the grain reserve sections of the bill. Your friends in Congress beat back proposals to build a gigantic reserve of 25 to 35 million tons of grain. No matter who held title to it, that much grain would keep your prices at or below the loan rate. The Committee settled for a more modest 300 to 700 million bushels of wheat, and left a feed grain reserve to the discretion of the Secretary.

With the extended reseal provision, grain in the reserve can remain under your control. You'll be able to redeem your loans when prices rise to a release point somewhere between 140 percent and 160 percent of the loan rate. In exchange, you'll give up the chance to cash in on a sudden price run-up like that of 1972. The Secretary may take title to grain whenever prices reach or exceed 175 percent of the loan level.

So the new farm bill represents a trade-off of short-range relief for probable long-range troubles. Farmers need and deserve the help they are getting now. But the benefits aren't going to last unless we take the necessary cuts and get back to collecting our money in the market place and not from the government.

Mr. DOLE. Mr. President, I think that because some Members were under the impression there would not be a rollcall vote, they may have left the Chamber and left the Capitol early.

I point out some Senators who have had important input in this legislation and who will not be here for the vote are the distinguished Senator from Oregon (Mr. PACKWOOD), the distinguished Senator from Indiana (Mr. LUGAR), a member of our committee, the distinguished Senator from Idaho (Mr. MCCLURE), the distinguished Senator from Kansas (Mr. PEARSON), and the distinguished Senator from Texas (Mr. TOWER). They wanted to make some supportive remarks, in the interests of expediting the approval of the report, and I wish to indicate their interest in and their support of this legislation, even though they will not be here for the yea-and-nay vote. I want my colleagues to know of their awareness of the importance of this legislation to the farmers of the Nation.

Mr. YOUNG. Mr. President, this is one of the best farm bills that has passed Congress during my service here. It is one of the most comprehensive farm bills and covers more commodities and programs than any other bill of this nature in my time. This bill is one of the best farm bills ever written and I think it is a far better bill than most people realize. This is due to the fine leadership of the Senator from Georgia (Mr. TALMADGE) and the ranking minority member, the distinguished Senator from Kansas (Mr. DOLE).

In Senator TALMADGE, we have a great leader, one who is respected not only among the Members of the Senate but also throughout the field of agriculture all over this Nation.

I know of no chairman during my service here who has been more able and effective in handling a bill than has the Senator from Georgia and I have been on the Agriculture Committee some 32 years. There has been none better.

In Senator DOLE, we have one who sought membership on the Agriculture Committee, both in the House and in the Senate. This is an outstanding example of his deep interest in agriculture. His knowledge of agriculture was evident many times throughout the hearings and writing of this comprehensive bill. These two Senators constitute the best team one could possibly have.

I also point out the bipartisanship of this committee. Every member of the committee voted for this bill, and I think everyone felt it was a good bill. I do not recall any other time in all the years I have been on this committee when the members were unanimous in support of an agriculture bill. As I said before, it is a most comprehensive and far-reaching and in some respects more complicated bill than any other with which I have ever dealt.

Mr. ANDERSON. Mr. President, the serious economic plight of Minnesota's sugar beet growers makes it imperative that we approve the conference report on the farm bill today but I must admit I would be a lot happier if I could determine what the Department of Agriculture intends to do about implementing the sugar cane and sugar beet price support amendment of this legislation.

There is nothing unclear about the action taken by the Congress, nor about the intention of the conferees. But there certainly is confusion in my State about the

on-again, off-again attitude and stalling actions of the Department of Agriculture—seemingly in direct defiance of the intent of the conferees.

Mr. President, I ask unanimous consent to have printed in the RECORD a copy of a letter I have today sent to Chairman TALMADGE of our Committee on Agriculture, hoping he can help clarify the situation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Washington, D.C., September 9, 1977.

HON. HERMAN TALMADGE,
Chairman, Committee on Agriculture, Nutrition, and Forestry, Russell Senate Office Building, Washington, D.C.

DEAR SENATOR TALMADGE: I urgently request your Committee to immediately look into what appears to be the outright defiance by the Department of Agriculture of an agreement by the farm bill conferees a month ago on sugar price supports.

Our Minnesota sugar beet growers, in serious financial plight and attempting to renegotiate financing of a cooperative refinery threatened with bankruptcy, are understandably confused by the on-again, off-again attitude of the Department that has stalled any action at all on the sugar program.

I call your attention to the enclosed release carried Wednesday by the Commodity News Service, titled, "USDA Withdraws Support for Sugar Tariff Plan." It states that the U.S. Department of Agriculture has decided the sugar support program in the 1977 farm bill should not be implemented with tariffs or quotas and quotes an unnamed aide to Agriculture Secretary Bob Bergland as the source of this information.

It is my understanding from Senator Humphrey that the Senate-House conferees specifically called for implementation of the new sugar amendment by an import management program that would not require government acquisition of sugar crops. Sugar beet growers in Minnesota had been so informed weeks ago. They were also informed that the Conferees recommended immediate implementation of the new import management program so to achieve the support level in the market place, even before legislation was signed into law by President Carter pursuant to the Department of Agriculture's existing authority in this area. This issue is discussed in the Conference Committee Report in Section 902.

Our growers have been waiting for action ever since receiving this information on the Conference Committee's deliberations. They were encouraged when CNS carried a story on August 17 quoting Agriculture Secretary Bob Bergland that he supports implementing a sugar tariff of about 4 cents per pound as part of the support program and that he would recommend this approach to President Jimmy Carter the following Monday.

However, no action has been taken by the Department of Agriculture to protect our growers, as harvest time approaches. Now, with this latest information our growers do not know what to think and I share their concerns.

I am also enclosing a copy of a telegram sent to President Carter and my office by Cy Carpenter, President of the Minnesota Farmers Union, protesting this delay in implementing the new program and requesting "immediate implementation of the sugar provision of the farm bill, in accordance with the clearly stated intent of Congress."

Unless your Committee can get some clarification or assurances from the Department of Agriculture or the White House on this matter, I am at a loss as to what to tell our disturbed Minnesota producers.

With warm personal regards.

Sincerely,

WENDELL R. ANDERSON,
U.S. Senator.

Mr. ANDERSON. Mr. President, I also ask unanimous consent that a copy of the Commodity News Service release carried on its wires Wednesday, September 7, headed "USDA Withdraws Support for Sugar Tariff Plan," be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

USDA WITHDRAWS SUPPORT FOR SUGAR TARIFF PLAN

WASHINGTON, September 7.—The U.S. Department of Agriculture has decided the sugar support program in the 1977 farm bill should not be implemented with tariffs or quotas, according to an aide to Agriculture Secretary Bob Bergland.

During a U.S. House-Senate conference on the farm bill, USDA representative Howard Hjort said tariffs would be the most likely method USDA would use to support sugar at the 13.5 cents a pound called for by Congress. Other methods to carry out the support program would be for USDA to purchase domestic sugar at less than 13.5 cents and then resell it or to impose quotas on imported sugar.

The Bergland aide today told CNS Bergland now doesn't think tariffs are realistic and he wants to implement the program without them. The aide said Bergland also does not like the idea of quotas. Other administration sources say existing law may prevent USDA from using the purchase resell approach if it means selling its stocks at a loss.

The International Sugar Agreement (ISA) currently under negotiation may be the last chance of obtaining needed support for U.S. producers, according to the aid and other administration sources.

Assistant Secretary of State Julius Katz last week told CNS he is still hopeful a successful agreement can be reached when ISA delegates meet for three weeks beginning Sept. 12.

A USDA official told CNS the Department also is concerned over establishing minimum wage rates for U.S. sugar industry workers, as required under the farm bill sugar program. USDA will ask for hearings on the issue after proposing a program to implement the farm sugar bill requirements.

USDA's desire to drop the tariff is "not surprising" according to Susan Bell of the House Agriculture Committee staff.

Bell said the decision to scrap import quotas is also understandable, since quotas "wouldn't have complied with an ISA".

Bell said farm bill conferees are not likely to reopen the conference due to the tariff/import decision.

Mr. ANDERSON. Mr. President, I cannot understand what appears to be an outright defiance by the Department of Agriculture of what the farm bill conferees specifically asked of them, and what the Department's spokesman at the conference sessions assured the conferees they could and would do.

Neither can our confused growers understand the department's inaction. They were informed when we went into recess that the Conferees had requested USDA to implement the new program at once, under its existing authority, without waiting for this legislation to be signed. They were also informed by members of the conference on the Senate side that it was to be implemented by an import management program to achieve the support price in the marketplace. This program would not require the expenditure of CCC funds, but produce revenue for the government instead as a result of added tariffs and duties on imported sugar. The conference committee report reflects these understandings in section 902.

Our Minnesota growers are angry over the Department's delaying tactics. Mr. President, Cy Carpenter, president of the Minnesota Farmers Union, sent the following wire to both President Carter and me on September 1:

We respectfully request your personal attention to cause immediate implementation of the sugar provision of the farm bill, in accordance with the clearly stated intent of Congress.

Continued importation of sugar at present astronomical levels will destroy an already fragile domestic market and might well render the sugar portion of the farm bill totally unworkable for future application.

Your prompt attention is sorely needed.

Mr. President, is this latest Commodity News Service report of no action the only answer our distressed farmers are going to get from the Department of Agriculture?

What this bill—and its proper and early implementation by the Department means to our Minnesota growers is best reflected by an article published August 14 in the Minneapolis Tribune, quoting Minnesota's Commissioner of Agriculture Bill Walker as saying the Federal sugar price support program is considered essential in salvaging the financially troubled Minnesota Beet Sugar Cooperative near Renville, Minn.

Mr. President, I ask unanimous consent that the Minneapolis Tribune article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Tribune, Aug. 14, 1977]

WALKER TIES BEET CO-OP SURVIVAL TO SUGAR BILL

(By Eric Pianin)

WASHINGTON, D.C.—The federal sugar price-support program, which awaits final action by Congress, is considered essential by Minnesota Agriculture Commissioner Bill Walker in salvaging the financially troubled Southern Minnesota Beet Sugar Cooperative near Renville.

"Without that bill, there would be a grave loss of sugar beet producers, which would threaten the co-op," Walker said last week.

But even federal imposition of a 13½-cents-per-pound floor on sugar prices is no guarantee that the 309 sugar beet farmers in the co-op will be able to salvage their operation.

The co-op was formed several years ago when founding members invested $10 million in equity and obtained short-term financing totalling $58 million from three banks—First National Bank of Minneapolis, Continental Bank of Illinois and Morgan Guaranty of New York. The loans from the banks were used to pay for construction of

the refinery and to capitalize the interest on the loans.

Construction of the plant was scheduled to be completed in 1974—a bonanza year, when sugar prices soared to as much as 65 cents per pound. But mechanical and labor problems delayed the opening of the plant until the middle of the 1975 sugar season, according to a plant official, and resulted in much higher construction costs than were anticipated.

The three banks, anxious to salvage a portion of their loans in the face of a depressed sugar market, reportedly agreed to accept a total of $19 million in cash and a promise of another $11 million later, if the co-op began showing a profit.

Officers of the co-op have applied to the St. Paul Bank for Cooperatives for $19 million in long-term financing, which would enable the co-op to pay off the other three banks.

However, the St. Paul bank has refused to act on the loan application until the sugar price-support program has been enacted and an analysis of its economic impact has been prepared, according to Walker, who has met with the bank officials.

Walker has warned that if the Renville refinery closes, "it may be the first domino to fall in a potential chain reaction of significant economic consequences."

There are three sugar cooperatives in Minnesota and neighboring North Dakota, including the one in Renville, the American Crystal Sugar Cooperative in the Red River Valley, and the Minn-Dak sugar cooperative, with headquarters in Wahpeton, N.D. A total of 2,300 sugar-beet farmers belong to the three co-ops.

Last year, those co-ops produced over 25 percent of the nation's beet sugar, at a rate of about 1 million pounds per day.

Mr. ANDERSON. I am sure Senators from other beet-growing and cane-growing States are hearing the same concern from their growers—concern both over delays in getting this program started, and concern over the Department of Agriculture apparently trying to distort the intent of Congress on how the legislation is to be implemented. I deeply regret that my colleague Senator HUMPHREY is not here today to further press this issue, as he was the sponsor in the conference of the Senate's acceptance of the de la Garza amendment for sugarcane and sugar beet price supports. The conference intent was unanimous. But now we seem to be frustrated by foot-dragging in the executive branch.

I am informed the Department of Agriculture has emergency authority to implement this program at once. I implore them to do so without further delay, to end all this confusion and end the flood of cheap sugar imports that service only the interests of a few big industrial users and threaten the economic collapse of our domestic sugar industry.

Mr. President, I am extremely pleased by reports today that Secretary Bob Bergland has negotiated an "agreement in principle" with other sugar producing nations to stabilize the price of sugar. Yet it will be months before any such agreement will take effect. Our Minnesota sugar beet farmers do not have these precious months to wait. They need help from USDA immediately and hence my request to Chairman TALMADGE to investigate the lack of action by the Department to the conference committee direction on sugar.

Mr. LEAHY. Mr. President. I strongly support the provisions of S. 275 as agreed to in conference. I believe the bill achieves the balance necessary for a comprehensive national food policy. The bill as reported from the conference committee delicately balances a number of necessary, yet sometimes competing, objectives—maintenance of a strong market orientation for American agriculture, the greatest possible freedom for farmers to make their own management decisions, maximum price assurance to protect farmers from economic disaster as well as to provide a stable supply of food and fiber to consumers, and minimum costs to our taxpayers.

I commend the hard work of the conferees. I especially praise the distinguished chairman, Senator TALMADGE, for his leadership in guiding this legislation through all the hurdles it has faced over the last 9 months.

As a Senator who played an active role in consideration of this legislation, there are a few provisions I would like to clarify before we endorse the conference reports.

First, the conference agreement on S. 275 contains a number of important provisions relating to the dairy industry. I would like to briefly comment on two which amend the dairy price support program authorized by the Agriculture Act of 1949.

This legislation increases the minimum level of dairy price support from 75 to 80 percent of parity through March 31, 1979. This is the provision approved by the Senate earlier this year. This will allow establishment of the price support level in a range between 80 and 90 percent of parity. While retaining the flexibility needed by the Secretary of Agriculture in administration of the program, the higher minimum affords farmers a needed measure of price assurance.

An important feature of the legislation is the requirement that the price support level be adjusted semiannually to reflect changes in the parity index. The purpose of such an adjustment is, quite simply, to prevent inflation-fed erosion of the price support level during the marketing year. By requiring such semiannual adjustment, we are seeking to assure the dairy farmer that the level of price support throughout the marketing year will have the same value, in terms of parity, as it did at the beginning of the year.

Several times in recent years, sharp increases in the cost of production have reduced the value of the price support level during the marketing year, thus lessening the price assurance the program is intended to provide.

In the administration of the price support program, the practice has been to establish a price support level at the beginning of the marketing year—presently April 1—and to maintain the announced dollar level of support through March 31 of the following year. A midyear adjustment has been made, partially as the result of congressional urging, in each of the last 2 years. Secretary Bergland is presently considering a similar adjustment for the current year.

The importance of such action can be seen if we take a look at the impact of inflation on the price support program in several recent years. In March 1973, the price support level was set at 75 percent of parity, $5.29 per hundredweight. By August of that year, the $5.29 level represented little more than 71 percent of parity.

Under congressional mandate, the price support level was increased to $5.61 per hundredweight in August 1973—80 percent of parity—but by March 31, 1974, the end of the marketing year, this had declined to 69 percent of parity. For the 1974–75 marketing year, the support level was set at 80 percent of parity on April 1, 1974—$6.57 per hundredweight. By the end of December 1974, $6.57 represented less than 73 percent of parity.

Thus, by mandating a midyear adjustment as we have in S. 275, we are assuring dairy farmers that the effect of inflation will be moderated.

Some concern has been expressed regarding the precise interpretation of the semiannual adjustment provision. S. 275 states—

> The support price of milk shall be adjusted by the Secretary at the beginning of each semi-annual period after the beginning of the marketing year to reflect any estimated change in the parity index during such semi-annual period.

As the author of the amendment in the Senate Committee on Agriculture, Nutrition and Forestry, it was my intention that the semiannual adjustment take into account any erosion in the price support level as a percentage of parity since the beginning of the marketing year. Restoring the price support level in this manner will have the effect of accomplishing our goal, the assurance to the dairy farmer that the announced level of price support affords the same degree of price assurance at the end of the marketing year as it did at the beginning of the year when it was established.

The second area of the farm bill I would like to address is the food stamp section. In particular, I draw my colleagues' attention to the compromise the conferees reached on the income deductions section of the bill. I believe the compromise needs some explanation. In the conference it was clear that the House conferees were unable to accept the Senate version of the excess shelter deduction because of the higher gross income ceiling for four-person households. As the author of the shelter deduction, I suggested to the conference committee a way in which that major objection could be met.

That compromise is that instead of a household being able to claim both an excess shelter and a dependent care—as in the Senate bill—a household could claim a shelter and/or dependent care deduction up to $75 a month. Thus, the gross income ceiling remains at the level adopted by the House.

The computation of the shelter and dependent care deductions would be the same as provided under the Senate bill. That is, the dependent care deduction is for the actual cost of dependent care when necessary to allow a household

member to continue employment, or training or education which is preparatory for employment, and the shelter deduction is for the amount by which a household's shelter costs exceed 50 percent of their income—after other deductions, including the dependent care deduction. Either deduction, or a combination of both, would be limited a maximum of $75 a month, and the dependent care and shelter costs would be calculated as anticipated during the certification period and as defined under current rules.

There are some other areas of the food stamp title of S. 275 which are very important to the poor people of my State. Vermont is one of the most rural States in the Union, and as such, it is difficult for many poor households to currently participate in the food stamp program, because of the transportation difficulties. One provision of S. 275 will increase the program's accessibility for rural poor. It requires the Secretary to set up standards—standards with teeth—for the location, and hours of operation of, certification and issuance offices. This, combined with the elimination of the purchase requirement, should make the program truly open to all those in need. I urge the Secretary to take the intent of this provision seriously and endeavor to implement our goal of reaching all those in need. Without accessible offices, the program cannot hope to meet its objective of insuring that all needy people have the opportunity to improve their diet through the use of food stamps.

The conference adopted the House version of the income exclusion for reimbursements. I am informed that the current rules require some sources of money to be counted as income even when they do not constitute a gain to the household. In Vermont, again because of its rural characters, some of the workers in the Community Action Agencies, as well as in other jobs, are reimbursed for travel costs incurred in the context of their work. Currently, the food stamp offices must count these mileage reimbursements as income for food stamp purposes. This clearly does not make any sense. The conference-adopted provision excludes as income any reimbursement of any kind—whether it is received by workers, students, or CETA employees—which does not constitute a gain to the household. Though a very minor provision in the act, this reform will mean a great deal to those it affects.

These provisions of the food stamp section of the farm bill will certainly have a great effect on making the food stamp program more accessible and more equitable. However, another provision of the bill, the elimination of the purchase requirement, will have the greatest impact on the equity, simplicity and accessibility of program. I thank Senators McGOVERN and DOLE for their sponsorship of this provision. Because EPR is such an important gain, I hope that it will be implemented as soon as possible after this bill's enactment. This reform is not dependent on other features of the bill, and thus does not have to wait until more complicated provisions are in place. I urge the Secretary not to delay in implementing the EPR provision.

Mr. President, I urge my colleagues to adopt S. 275 with the amendments suggested by the conference committee.

Mr. CLARK. Mr. President, I support the conference report on S. 275—the Food and Agriculture Act of 1977. I want to urge the Senate to join me in support of this important legislation, and I want to commend the Senate Committee on Agriculture, Nutrition, and Forestry and its chairman, the distinguished Senator from Georgia, for his foresight and diligent efforts in developing this bill and moving it through to final passage so expeditiously.

Long before last fall's election, Chairman TALMADGE was at work directing the committee staff to put together a comprehensive, long-term farm bill. Early this year, the results of that foresight emerged in a committee draft bill. Committee members were able to take the committee draft to the field for hearings in early January, and we held three hearings in Iowa on this bill in some of the coldest weather I have encountered in some time.

Chairman TALMADGE managed the almost impossible task of holding extensive hearings on the draft bill, and of scheduling markup late enough so that the incoming, new administration would have a maximum opportunity to make an input in the bill, but still complete work on the draft in time to beat the budget deadline for reporting the bill to the floor. The committee met early and long and worked through the bill and reported it to the floor in advance of the May deadline.

It took the same kind of determination and leadership to work through the conference that began in July—as soon as possible after the House passed their version of the farm bill. Finally, just before the August recess, the conference agreed on the provisions of the bill—after having worked through several hundred complex and important differences in somewhat less than 1 week's time. Mr. President, this has been a remarkable effort by Chairman TALMADGE and his staff and they deserve our commendation and our thanks.

The result of this hard work is a strong bill. It provides for major improvements in all of the areas where the earlier farm bill was weak. It increases loan and target prices for each major commodity. It significantly improves the disaster program for the intervening period while the Secretary is developing a new, greatly strengthened, insurance program. It provides for a strengthened research program to insure that our future supply of food and fiber will be forthcoming. It strengthens the food stamp program, especially by removing the purchase requirement, but by a number of other changes as well. And, it strengthens the Public Law 480 food for peace program by increasing program funding.

Clearly, Mr. President, these are important improvements. However, in some regards, the bill does not go far enough. It does not provide feed grain producers as much target price protection as I had hoped, for example. I was disappointed that the corn target price is below the cost of production for corn, as that cost is computed by the Senate Agriculture Committee. But, on the whole, this farm bill's provisions appear to be about the best we could have gotten the President to support.

I have one concern I would like to discuss at this juncture, Mr. President. I hope that the Secretary of Agriculture will move as quickly as possible to implement the authorities of this bill to the maximum benefit of farmers.

There is a great deal of discretion for the Secretary in this bill. There must be if the Secretary is to have the flexibility he needs to meet unforeseen situations. But, that means that there are many ways to cut concerns on programs to reduce budget impacts, and in the process cause serious damage to farmers. In the past, this discretion has sometimes meant that programs were simply not available to any significant extent when they were needed most.

I know Bob Bergland well, and I know we can count on him to fight for the farmer every time. But, in a government as complex as ours, there are other important decisionmakers as well as the Secretary—even when the law gives the authority for a decision clearly to the Secretary of Agriculture. There is always OMB, for example, and budget impacts must always be taken into consideration.

In that context, I want to say to President Carter that we are passing a strong farm bill here, and we mean for him to administer strong farm programs to the significant benefit of farmers when they need help.

Part of my concern arises over the current corn surplus problem and the administration's handling of it so far. Corn prices at interior Iowa points are now a disaster in themselves. Producers are understandably upset and angry. In many cases they are getting less than $1.50 per bushel for corn—more than 70 cents below their average cost of production.

Many producers are being forced to sell at these prices because they have debts to pay, and because they must move their 1976 crop corn to make room for the 1977 crop which is about to begin to come in from the field.

The administration has announced a 2-month extension of the 1976 crop loan program, but it has not really addressed the problem of the very large surplus of corn farmers are still holding—old crop corn from last year. I am asking the Secretary in a letter today to move immediately to exercise his authority to extend the 1976 crop loan program for another full year, and to reopen the 1976 loan program for corn not originally placed under loan. Without this immediate help, farmers will increasingly be forced to sell at current, depressed prices.

It is, frankly, difficult for me to understand the administration's failure to move more forcefully in this area so far. Certainly, current low prices warrant prompt action. I urge the Secretary to move quickly to reduce current price pressure. And, I hope the administra-

tion's past response is not completely indicative of the way they intend to manage these programs under this new law.

In summary, Mr. President, I believe this is a strong bill. I have high hopes for its fair and effective administration. I hope the Senate will join me in its support.

I wish to commend my colleagues on the conference committee for S. 275, the Agriculture Act of 1977, particularly for their well-balanced, reasoned approach to the reform of the food stamp program.

Mr. CLARK. Mr. President, their consideration of the food stamp program represents the culmination of over 2½ years of congressional review of the program, and adoption of the conference report will result in the creation of a much stronger, better targeted program to provide low-income people with a vital nutritional supplement.

The food stamp portions of the bill represent a two-pronged approach to the problems in that program—both real and perceived. On the one hand, the program is tightened up significantly through the establishment of gross income eligibility levels, new fraud penalties and an expanded work registration provision. On the other hand, access to the program is greatly expanded through the elimination of the purchase requirement, EPR, simplified certification procedures, a simplified system of deductions and a mandate of specific certification and issuance standards.

The single most important reform, enacted overwhelmingly by both Houses of Congress, is EPR. This provision will enable several million poor people who cannot now afford the cost of stamps to take advantage of the program. Prompt implementation of EPR is critical to the continued successful operation of the program, and it should not be delayed, even if it means implementing EPR prior to the other standards of eligibility.

Program participation will also be greatly expanded on Indian reservations through the provisions which allow for tribal administration of the program and dual operation of commodities and food stamps. The latter provision, like EPR, is critical to the operation of the program and to nutritional access for Indian people. The commodity provisions contain two key elements. The first is the right of Indian tribes to opt back into the commodity program. It is important that this provision be implemented expeditiously. Second, the bill requires an upgrading of the commodity package. While the bill does not specify the contents of the commodity package, the new commodity package should closely approximate the benefits available under the food stamp program because commodities and food stamps are intended to be interchangeable.

Access to the program is eased through specific and general administrative directives designed to simplify program administration and to provide for uniform national operation. An example of the former is the directive to provide for a single certification interview and simplified application process for public assistance and SSI recipients. Additionally, the Secretary is required to establish specific program standards for the location and operation of certification and issuance centers. In developing standards it is important that the Secretary look to the real problems faced by potential recipients, and develop innovative and imaginative responses to these problems.

The whole intent of this provision is to make it easier for eligible people to participate, whether they are people who work during most normal hours of operation, people located in remote rural areas or people who are merely unable to participate through the normal certification process due to infirmities, age or other similar problems.

Another administrative problem—the length of the certification period—is addressed in the bill. Currently, far too many food stamp households are assigned short—1 month—certification periods, and the resulting administrative delays, caused by constant recertification, act as an impediment to program participation. The bill's approach is to mandate a minimum 3-month certification period, which should be longer for the elderly and people on fixed incomes, with only a few specific exceptions. The bill authorizes one month or shorter certification periods, but only when absolutely necessary. Examples of situations which would trigger a shorter certification period include: the initial certification of migrant farmworker households; certification of households pending receipt of AFDC, General Assistance, SSI benefits or unemployment insurance; temporary assistance to households of striking workers; and, for people certified within 48 hours of application under the expedited issuance provision.

The conference committee compromised on the guarantee of a nutritionally adequate diet. Our bill provided for a nutritionally adequate diet, and the House bill contained no similar language. This difference proved merely academic, however, since both bills specified the use of the thrifty food plan. Under the conference report, USDA is to set uniform coupon allotments—differentiated only by household size and for Alaska, Hawaii, Puerto Rico, and the territories—based on recipients' actual costs of food at the check-out counter. Since the cost of food differs around the country because of living costs, taxes, transportation costs, and other factors USDA should use an averaging formula to develop the uniform coupon allotments.

In tightening up work registration, we have added a major provision—the requirement that people engage in reasonable job search activities. While I feel it is important that the policy of the Federal Government be to encourage and assist people in obtaining employment, it is equally important that the job search requirement not become solely a tool for limiting participation. It is for this reason that the Secretary was given the discretion to establish job search requirements, rather than having uniform requirements. In so doing, the Secretary must take into account the likelihood that such activities would actually lead to employment, the previous work experience, age and capabilities of registrants, and the ability of registrants to travel to seek employment.

Finally, the conference committee adopted a modified version of a House-passed pilot project to require recipients to work off their food stamps. This pilot is to last 18 months from the adoption of the bill, and it is supposed to test the feasibility of workfare in seven urban and seven rural areas. Although previous workfare programs operated in the contexts of welfare programs have proven unsuccessful, it is important that it be tested fully. Therefore, it should be implemented expeditiously so that the final report, due at the expiration of the pilot's authority, contains valid conclusions.

Once again, I urge my colleagues to adopt the conference report and thank the conferees, and particularly Senator TALMADGE, for their very able representation.

Mr. JAVITS. Mr. President, I commend the committee's chairman, Mr. TALMADGE, and the ranking Republican of the committee, Mr. DOLE, for their diligent work on this conference report and I support the conference report.

I am especially pleased by the specifics of the food stamp title, although I would have preferred that my State receive a fairer portion of the food stamp program. Many households in New York will be terminated from the program, and others will be hurt; that is never easy to accept when one considers the inordinate costs poor people must bear in my State.

However, there is much in the food stamp reform proposal that demands support and which, on balance, influences my judgment on the entire package. Many of the obstacles New Yorkers have experienced will fall once this bill is in place.

Prime among those hurdles is the purchase price. Many New Yorkers, as well as other people eligible for food stamps around the country, were forced to forgo all or part of their benefits because of their inability to scrape up the purchase price. This barrier is dropped under the conference bill, and the sooner this provision is implemented, the better the program will be able to serve the poor dependent on its health-vital assistance.

The elimination of the purchase price should be put into effect as soon as is administratively feasible after this bill's enactment. There is no reason for delay, insofar as it will only serve to simplify the program's administration. Since it only changes the method of delivering benefits, and not the level of assistance itself, there is no reason to wait until the entire regulatory package is in place.

This food stamp bill wisely encourages food stamp participants to work. I consider this one of the strengths of the current program, and I am pleased this principle was retained in the reform package. In this regard, I would like to single out one conference committee action on behalf of my distinguished colleague from Massachusetts, Senator BROOKE, who shares my concern in this area.

The conference adopted an amend-

ment Senator BROOKE introduced on the floor with a House variation. The aim of this provision is to exclude from the computation of income any reimbursements received by a household member which do not represent any real gain to the household. This is a sound decision, for the counting of such reimbursements represents a disincentive to work.

Take, for example, the case of messengers who operate their own vehicles in the course of their job. The chances are that these workers are paid close to the minimum wage and, in addition, are reimbursed for their mileage. These workers, who could very well be eligible for food stamps, would have both wages and the mileage requirement counted as income to determine food stamp eligibility under the current rules. Since the mileage reimbursement represents only money that they have already spent to hold their jobs, it is unreasonable to count that as income. Thus, I applaud the conference committee's decision to exempt such reimbursements, and to end this work disincentive.

I should further note that this income exclusion would also be applicable to other workers; students receiving specific reimbursements for travel, for example; CETA workers reimbursed for specific costs; and people serving as volunteers who are reimbursed for travel and/or meals.

There is one final provision in the bill which has come to my attention and which I feel needs some discussion. The bill authorizes the establishment of a separate poverty line—to be used as the net income eligibility level—for Puerto Rico and the territories. I am troubled by this provision and urge the administration to resist developing a separate standard. Food stamp eligibility should be set at a level of need, and the level of need on the island of Puerto Rico is roughly the same, if not higher, than on the mainland. Indeed, some studies have shown food costs to be approximately 20 percent higher in Puerto Rico than in the continental United States.

However, if the administration should choose to set new standards for Puerto Rico, it should use the same methodology that was used to establish the U.S. poverty line. This would require the use of food costs as the key factor in setting the poverty line. If different criteria were used in the development of a Puerto Rico poverty line, it would be nothing more than arbitrary discrimination against those U.S. citizens, penalizing them for poverty.

Once again, I compliment my colleagues on the Agriculture Committee for their long and hard work on this legislation.

The PRESIDING OFFICER. The question is on agreeing to the conference report. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Ohio (Mr. GLENN), the Senator from Maine (Mr. HATHAWAY), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from South Dakota (Mr. ABOUREZK), the Senator from Rhode Island (Mr. PELL), the Senator from Illinois (Mr. STEVENSON), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Vermont (Mr. LEAHY), the Senator from Delaware (Mr. BIDEN), the Senator from Connecticut (Mr. RIBICOFF), the Senator from South Dakota (Mr. MCGOVERN), and the Senator from North Carolina (Mr. MORGAN) are necessarily absent.

I further announce that the Senator from Hawaii (Mr. INOUYE), is absent on official business.

I further announce that, if present and voting, the Senator from South Dakota (Mr. MCGOVERN), the Senator from Minnesota (Mr. HUMPHREY), and the Senator from North Carolina (Mr. MORGAN) would each vote "yea."

I further announce that, if present and voting, the Senator from Connecticut (Mr. RIBICOFF) would vote "nay."

Mr. STEVENS. I announce that the Senator from Utah (Mr. GARN), the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from Utah (Mr. HATCH), the Senator from Oregon (Mr. HATFIELD), the Senator from North Carolina (Mr. HELMS), the Senator from Indiana (Mr. LUGAR), the Senator from Maryland (Mr. MATHIAS), the Senator from Idaho (Mr. MCCLURE), the Senator from Oregon (Mr. PACKWOOD), the Senator from Kansas (Mr. PEARSON), the Senator from New Mexico (Mr. SCHMITT), the Senator from Texas (Mr. TOWER), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD), the Senator from Indiana (Mr. LUGAR), the Senator from Kansas (Mr. PEARSON), the Senator from New Mexico (Mr. SCHMITT), and the Senator from Texas (Mr. TOWER) would each vote "yea."

The result was announced—yeas 63, nays 8, as follows:

[Rollcall Vote No. 362 Leg.]

YEAS—63

Mathias	Packwood	Stevenson
McClellan	Pearson	Tower
McClure	Pell	Wallop
McGovern	Ribicoff	

So the conference report was agreed to.

Mr. TALMADGE. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. DOLE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I just wish to take this occasion to express my personal appreciation, and I am sure the appreciation of the Senate, to the distinguished Senator from Georgia (Mr. TALMADGE) and the distinguished Senator from Kansas (Mr. DOLE) for the excellent job they have done in conducting hearings on the bill, carrying it through conference, managing the bill on the floor, and managing the conference report on the floor.

It has been a difficult bill, but they have succeeded in tailoring a bill that I believe will meet with the approval of the President of the United States, and I think the Senate is in their debt. I personally am in their debt, and I commend them.

Mr. TALMADGE. Mr. President, I deeply appreciate the remarks of the distinguished majority leader.

Mr. BAKER. Mr. President, I join the majority leader in extending congratulations to the distinguished manager of the bill (Mr. TALMADGE) and the distinguished ranking minority member (Mr. DOLE). Not only have they done a good, workmanlike job, as the majority leader has pointed out, but they have done it in the good spirits we have come to expect from that committee.

Mr. TALMADGE. Mr. President, I am deeply grateful to my distinguished friend and neighbor, the senior Senator from Tennessee, for his comments.

Mr. DOLE. Mr. President, I deeply appreciate the comments of both the distinguished majority leader and the distinguished minority leader. It was a difficult bill, but under the leadership of Senator TALMADGE it was much easier.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a brief period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGES FROM THE HOUSE

At 12:02 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that:

The House insists upon its amendment to the amendment of the Senate numbered 82 to the bill (H.R. 7555) making appropriations for the Department of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending September 30, 1978, and for other purposes, disagreed to by the Senate, and agrees to the further conference requested by the Senate on the disagreeing votes of the two Houses thereon; and that Mr. FLOOD, Mr. NATCHER, Mr. SMITH of Iowa, Mr. PATTEN, Mr. OBEY, Mr. ROYBAL, Mr. STOKES, Mr. EARLY, Mr. MAHON, Mr. MICHEL, Mr. CONTE, Mr. O'BRIEN, and Mr. CEDERBERG were appointed managers of the further conference on the part of the House.

The House has agreed to the concurrent resolution (H. Con. Res. 341) revising the congressional budget for the U.S. Government for the fiscal year 1978, in which it requests the concurrence of the Senate.

ENROLLED BILLS SIGNED

At 3 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that the Speaker has signed the following enrolled bills:

H.R. 5294. An act to amend the Consumer Credit Protection Act to prohibit abusive practices by debt collectors.

H.R. 7933. An act making appropriations for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

The enrolled bills were subsequently signed by the President pro tempore.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications, which were referred as indicated:

EC–1841. A letter from the Comptroller General reporting on the 16th and 17th Special Messages of the President of the United States in connection with certain rescissions and deferrals; jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations; the Budget; Commerce, Science, and Transportation; Energy and Natural Resources; Armed Services; and Environment and Public Works.

EC–1842. A letter from the Assistant Secretary of State for Congressional Relations transmitting, pursuant to law, a determination with statement of reasons permitting the sale to Portgual under title I of the Agricultural Trade Development and Assistance Act of 1954 of up to $20 million worth of agricultural commodities in fiscal year 1977 (with accompanying papers); to the Committee on Agriculture, Nutrition, and Forestry.

EC–1843. A letter from the Acting Assistant Secretary of State for Congressional Relations transmitting, pursuant to law, a determination with statement of reasons permitting the sale to Morocco of up to 100,000 metric tons of wheat/wheat flour worth approximately $11 million (with accompanying papers); to the Committee on Agriculture, Nutrition, and Forestry.

EC–1844. A letter from the Assistant Secretary of Defense certifying, pursuant to law, that no use was made of funds appropriated during the period October 1, 1976–March 31, 1977 to make payments under contracts for any program in a foreign country where the Treasury Department was holding excess foreign currencies in the country involved; to the Committee on Appropriations.

EC–1845. A letter from the Deputy Secretary of Defense transmitting, pursuant to law, seven reports of violations of the Anti-Deficiency Act (with accompanying papers); to the Committee on Appropriations.

EC–1846. A letter from the Assistant Secretary of Defense transmitting, pursuant to law, secret-restricted data entitled "Selected Acquisition Reports (SAR's) and SAR Summary Tables for the quarter ending June 30, 1977" (with accompanying reports); to the Committee on Armed Services.

EC–1847. A letter from the Director of the Office of Legislative Affairs, Department of the Navy, informing the Senate, pursuant to law, of the intention of the Department of the Navy to donate certain surplus property to the Hawaiian Railway Society of Honolulu, Hawaii; to the Committee on Armed Services.

EC–1848. A letter from the General Counsel of the Department of Defense transmitting a draft of proposed legislation relating to the appointment, promotion, separation, and retirement of members of the armed forces, and for other purposes (with accompanying papers); to the Committee on Armed Services.

EC–1849. A letter from the Assistant Secretary of Defense transmitting, pursuant to law, a list of contract award dates for the Patrol Hydrofoil Missile program during the period July 15, 1977 to October 15, 1977 (with accompanying papers); to the Committee on Armed Services.

EC–1850. A letter from the Deputy Assistant Secretary of Defense transmitting, pursuant to law, notification of two construction projects to be undertaken by the Army National Guard and the Naval and Marine Corps Reserve; to the Committee on Armed Services.

EC–1851. A letter from the Assistant Secretary of Defense transmitting, pursuant to law, a list of contract award dates for the UTTAS helicopter covering contract awards during the period July 15, 1977, to October 15, 1977 (with accompanying papers); to the Committee on Armed Services.

EC–1852. A letter from the Administrator of the General Services Administration transmitting, pursuant to law a report of the stockpile program for the period ending March 31, 1977 (with an accompanying report); to the Committee on Armed Services.

EC–1853. A letter from the Deputy Assistant Secretary of Defense transmitting, pursuant to law, a list of 11 construction projects to be undertaken by the U.S. Army Reserve (with accompanying papers); to the Committee on Armed Services.

EC–1854. A letter from the Deputy Assistant Secretary of Defense transmitting, pursuant to law, a list of 13 construction projects to be undertaken by the Air National Guard (with accompanying papers); to the Committee on Armed Services.

EC–1855. A letter from the Deputy Assistant Secretary of Defense transmitting, pursuant to law, a list of 10 construction projects to be undertaken by the Army National Guard (with accompanying papers); to the Committee on Armed Services.

EC–1856. A letter from the President and Chairman of the Export-Import Bank of the United States transmitting, pursuant to law, a report on loan, guarantee and insurance transactions supported by Eximbank during July 1977 to Communist countries (with an accompanying report); to the Committee on Banking, Housing, and Urban Affairs.

EC–1857. A letter from the Acting Secretary of the Treasury transmitting, pursuant to law, a report on the operations of the Exchange Stabilization Fund for fiscal year 1976 and the three-month period ended September 30, 1976 (with an accompanying report); to the Committee on Banking, Housing, and Urban Affairs.

EC–1858. A letter from the President and Chairman of the Export-Import Bank of the United States transmitting, pursuant to law, a report on loan, guarantee and insurance transactions supported by Eximbank during June 1977 to Communist countries (with an accompanying report); to the Committee on Banking, Housing, and Urban Affairs.

EC–1859. A letter from the Secretary of Commerce transmitting, pursuant to law, the National Marine fisheries Service Report for the calendar year 1976 (with an accompanying report); to the Committee on Commerce, Science, and Transportation.

EC–1860. A letter from the Secretary of Commerce transmitting, pursuant to law, the "Central, Western, and South Pacific Fisheries Development Program Report for Calendar Year 1976" (with an accompanying report); to the Committee on Commerce, Science, and Transportation.

EC–1861. A letter from the Secretary of Commerce transmitting, pursuant to law, the annual report on the Relative Cost of Shipbuilding in the Various Coastal Districts of the United States (with an accompanying report); to the Committee on Commerce, Science, and Transportation.

EC–1862. A letter from the Secretary of Transportation transmitting, pursuant to law, a report entitled "Airport Land Banking" (with an accompanying report); to the Committee on Commerce, Science, and Transportation.

EC–1863. A letter from the Secretary of Transportation transmitting, pursuant to law, a report entitled "establishment of New Major Public Airports in the United States" (with an accompanying report); to the Committee on Commerce, Science, and Transportation.

EC–1864. A letter from the Chairman of the Consumer Product Safety Commission transmitting, pursuant to law, the Consumer Product Safety Commission's legislative submission to the Office of Management and Budget (with accompanying papers); to the Committee on Commerce, Science, and Transportation.

EC–1865. A letter from the Chairman of the Consumer Product Safety Commission transmitting, pursuant to law, the Consumer Product Safety Commission's fiscal year 1979 budget request (with accompanying papers); to the Committee on Commerce, Science, and Transportation.

EC–1866. A letter from the Vice President of the National Railroad Passenger Corporation transmitting, pursuant to law, a report on the operations of Amtrak for the month of April 1977 (with an accompanying re-

port); to the Committee on Commerce, Science, and Transportation.

EC–1867. A letter from the Chairman of the Pennsylvania Avenue Development Corporation, transmitting, pursuant to law, the annual report of the Corporation dated January 31, 1977 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–1868. A letter from the Acting Assistant General Counsel of the Federal Energy Administration, transmitting, pursuant to law, a notice of a meeting relating to the International Energy Program (with accompanying papers); to the Committee on Energy and Natural Resources.

EC–1869. A letter from the Director of the Bureau of Outdoor Recreation, transmitting a report entitled "The Upper Mississippi, A Wild and Scenic River Study: Final Report and Environmental Impact Statement" (with accompanying papers); to the Committee on Energy and Natural Resources.

EC–1870. A letter from the Administrator of the Federal Energy Administration, transmitting, pursuant to law, a report on gasoline service station market shares—May 1977 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–1871. A letter from the Administrator of the Federal Energy Administration, transmitting, pursuant to law, a report on sales of refined petroleum products, May 1977 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–1872. A letter from the Acting Assistant General Counsel of the Federal Energy Administration, transmitting, pursuant to law, a notice of a meeting relating to the International Energy Program (with accompanying papers); to the Committee on Energy and Natural Resources.

EC–1873. A letter from the Acting Assistant General Counsel of the Federal Energy Administration, transmitting, pursuant to law, a notice of a meeting relating to the International Energy Program (with accompanying papers); to the Committee on Energy and Natural Resources.

EC–1874. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, a report on sales of refined petroleum products April 1977 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–1875. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, a report on gasoline service station market shares April 1977 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–1876. A letter from the Assistant Secretary of the Interior transmitting a draft of proposed legislation to amend the Federal Land Policy and Management Act of 1976 (with accompanying papers); to the Committee on Energy and Natural Resources.

EC–1877. A letter from the President of the United States relating to his decision regarding an Alaska natural gas transportation system; to the Committee on Energy and Natural Resources.

EC–1878. A letter from the Administrator of the Federal Highway Administration transmitting a copy of America's Highways (with acompanying report); to the Committee on Environment and Public Works.

EC–1879. A letter from the Administrator of the General Services Administration transmitting, pursuant to law, a prospectus for alterations at the St. Louis, Missouri, U.S. Customhouse in the amount of $14,970,500 (with accompanying papers); to the Committee on Environment and Public Works.

EC–1927. A letter from the Secretary of Commerce transmitting, pursuant to law, a draft of proposed legislation to amend section 17 of the Act of July 5, 1946, as amended (with accompanying papers); to the Committee on the Judiciary.

EC–1928. A letter from the Commissioner of the Immigration and Naturalization Service transmitting, pursuant to law, copies of orders suspending deportation, as well as a list of the persons involved (with accompanying papers); to the Committee on the Judiciary.

REPORTS OF COMMITTEES SUBMITTED DURING RECESS

Under authority of the order of September 8, 1977, the following reports of committees were submitted on September 8, during the recess of the Senate:

By Mr. MUSKIE, from the Committee on the Budget: Without amendment:

S. Res. 240. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of H.R. 5027 as reported (Rept. No. 95–414).

S. Res 246. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1731 (Rept. No. 95–415).

S. Res. 257. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 2057 (Rept. No. 95–416).

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. ABOUREZK, from the Select Committee on Indian Affairs:

With an amendment:

S. 785. A bill to declare that all right, title, and interest of the United States in 2,640 acres more or less, are hereby held by the United States in trust for the Paiute and Shoshone Tribes of the Fallon Indian Reservation, Nevada, to promote the economic self-sufficiency of the Paiute and Shoshone Tribes, and for other purposes (title amendment) (Rept. No. 95–417).

By Mr. LONG, from the Committee on Finance:

With amendments:

H.R. 2850. An act to suspend until the close of June 30, 1978, the duty on certain latex sheets (title amendment) (Rept. No. 95–419).

H.R. 2982. An act to suspend until the close of June 30, 1980, the duty on synthetic tantalum/columbium concentrate (title amendment) (Rept. No. 95–420).

H.R. 3093. An act to provide duty-free treatment for certain copying lathes used for making rough or finished shoe lasts and for parts of such lathes (title amendment) (Rept. No. 95–421).

H.R. 3259. An act to continue to suspend for a temporary period the import duty on certain horses (title amendment) (Rept. No. 95–422).

Without amendment:

H.R. 5289. An act for the relief of Joe Cortinam of Tampa, Florida (Rept. No. 95–423).

H.R. 5037. An act for the relief of Jack R. Misner (Rept. No. 95–424).

With an amendment:

H.R. 422. An act to amend the Tariff Schedules of the United States to provide duty-free treatment of any aircraft engine used as a temporary replacement for an aircraft engine being overhauled within the United States if duty was paid on such replacement engine during a previous importation (title amendment) (Rept. No. 95–425).

S. Res. 76. A resolution expressing the sense of the Senate with respect to the immediate removal of certain regulations unilaterally put in place by the European Economic Community which have the effect of damaging and interfering with historic and acceptable trade patterns in the United States exports of dried prunes, and efforts made to restrict exports of walnuts to the European Economic Community, and action taken by the United States if such import regulations are not immediately removed and if additional unilateral regulations are instituted (title and preamble amended) (Rept. No. 95–526).

SUBSTITUTION OF CONFEREE ON LABOR–HEW APPROPRIATIONS BILL

Mr. MAGNUSON. I ask unanimous consent that the Senator from West Virginia (Mr. ROBERT C. BYRD) be discharged as a conferee on the Labor-HEW appropriation bill (H.R. 7555) and that the Senator from Hawaii (Mr. INOUYE) be appointed.

The PRESIDING OFFICER. Without objection, it is so ordered.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that today, September 9, 1977, he pre-

sented to the President of the United States the enrolled bill (S. 1153) to abolish the Joint Committee on Atomic Energy and to reassign certain functions and authorities thereof, and for other purposes.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. DECONCINI (for himself, Mr. GOLDWATER, and Mr. HANSEN):

S. 2076. A bill to authorize the Secretary of the Interior to transfer franchise fees received from certain concession operations at Grand Canyon National Park, Ariz., to the Grand Canyon Unified School District, Ariz., and for other purposes; considered and passed.

By Mr. ABOUREZK:

S. 2077. A bill to designate the Kent State National Historic Site, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. SCHWEIKER:

S. 2078. A bill to amend the Internal Revenue Code of 1954 and the Social Security Act to provide an exemption from coverage under the social security program, through a tax refund procedure, for employees who are members of religious faiths which oppose participation in such program, and to provide a similar exemption on a current basis (pursuant to waiver certificates filed in advance) for employers engaged in farming and their employees in cases where both are members of such faiths; and to make the existing exemption for self-employed members of such families available to certain additional individuals; to the Committee on Finance.

By Mr. METCALF:

S. 2079. A bill for the relief of Lawrence Youngman; to the Committee on the Judiciary.

By Mr. JACKSON (by request):

S. 2080. A bill to make the Federal Columbia River Power System available for maximum electric efficiency for future essential power supply to promote conservation, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. CRANSTON:

S. 2081. A bill to provide for the extension and expansion of the Headstart program; to the Committee on Human Resources.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. ABOUREZK:

S. 2077. A bill to designate the Kent State National Historic Site, and for other purposes; to the Committee on Energy and Natural Resources.

Mr. ABOUREZK. Mr. President, the Secretary of the Interior recently announced that the Department would undertake a study to determine the historic significance of the "Blanket Hill" area on the Kent State University campus. As you know, this is the site where four Kent State students were shot to death on May 4, 1970.

Following completion of the Department's study the Secretary would then be in a position to determine whether or not the site should be designated as a national historic landmark. The Secretary agreed to undertake such a study when it became clear that the university was planning to proceed with construction of a new gymnasium on the "Blanket Hill" site thereby destroying any historic character which the site might possess.

Although I have not reached any final decision myself regarding designation of the area as an historic landmark or site, it is my view that the Secretary should be given the opportunity to conduct his study and report his findings to the Congress before the area is destroyed through the construction of the gym. While construction has been postponed on several occasions as a result of various court-ordered injunctions, there is no assurance that construction will not begin in earnest as soon as the latest injunction is lifted.

I am introducing legislation today designed to maintain the status quo in the area until the Secretary at least has an opportunity to complete his study. Under the provisions of my bill, the Secretary is directed to undertake and complete a study of the "Blanket Hill" site within 90 days from the date of enactment of the act. Pending completion of this study, the Secretary is further directed to promulgate and enforce such reasonable restrictions on the use of the site as may be necessary to preserve historic values present at the site. The Secretary is to request the Attorney General to initiate an action for injunctive relief to prohibit any violation or anticipated violation of such restrictions.

Should the Secretary, on the basis of this study, conclude that the site does possess outstanding historic values, he is directed to designate the area as a national historic site and administer the site in accordance with various existing authorities.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2077

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Congress hereby finds and declares—

(a) that the spirit and direction of the Nation are founded upon and reflected in its historic past;

(b) that the historical and cultural foundations of the Nation should be preserved as a living part of our community life and development in order to give a sense of orientation to the American people;

(c) that the Federal Government has a responsibility to preserve and protect such values;

(d) that; through the Antiquities Act of 1906 (35 Stat. 225), the Historic Sites Act of 1935 (49 Stat. 666), the Historic Preservation Act of 1966 (80 Stat. 915) as amended, and other legislation, the Federal Government has developed a program which can protect and preserve such values;

(e) that the site locally known as "Blanket Hill" at Kent State University at Kent, Ohio, holds great significance for a number of Americans as the site of the Kent State deaths occurring on May 4, 1970, in terms of political, cultural, social and other values and aspirations of this Nation;

(f) that the Secretary of the Interior (hereinafter referred to as the "Secretary") is presently undertaking a study to determine whether the values present at such site possess the requisite national significance that the area should be preserved for this and future generations in accordance with existing law; and

(g) that the construction of a gymnasium on the site of "Blanket Hill" will irretrievably destroy those values thereby irrevocably foreclosing and frustrating any national interest in the preservation of such site.

SEC. 2(a). Within 90 days from the date of enactment of this Act, the Secretary shall complete a study of the national significance of the "Blanket Hill" site (hereinafter referred to as the "site") and make a finding as to whether the site possesses the requisite national significance to be designated as a National Historic Site in accordance with the standards and criteria developed pursuant to the Historic Site Act of 1935 (49 Stat. 666).

(b) Pending completion of the study provided for in Subsection (a) of this Section, the Secretary is directed to promulgate and enforce such reasonable restrictions on the use of the site as may be necessary to preserve the values present at the site and shall request the Attorney General of the United States to initiate an action for injunctive relief to prohibit any violation or anticipated violation of such restrictions.

SEC. 3. (a) If the Secretary finds that the site possesses the requisite national significance, he shall (1) designate the site as a National Historic Site to be known as the "Kent State National Historic Site" [by publication of a notice in the Federal Register] and (2) prepare and make available a map depicting the area so designated, which map shall be on file and available for public inspection in the Office of the Secretary of the Interior.

(b) The Secretary is authorized to acquire such lands and interests in lands, including any improvements thereon by donation, purchase with donated or appropriated funds, or exchange, within the Historic Site as he deems necessary.

(c) Except as otherwise provided in this Act, the site shall be administered by the Secretary in accordance with the provisions of this Act, the Act of August 25, 1916 (39 Stat. 535), as amended and supplemented, and the Act of August 21, 1935 (49 Stat. 666), as amended.

SEC. 4. (a) There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

(b) Within two years from the effective date of this Act the Secretary shall develop and transmit to the Committee on Energy and Natural Resources of the Senate and to the Committee on Interior and Insular Affairs of the House of Representatives a general management plan for the use and development of the site consistent with the purposes of this Act indicating:

(1) the lands and interests in lands adjacent or related to the site which he deems necessary or desirable to be acquired for the purposes of resource protection, scenic integrity, or management and administration of the area in furtherance of the purposes of this Act and the estimated cost thereof;

(2) the number of visitors and types of public use within the site which can be accommodated in accordance with the protection of its resources; and

(3) the location and estimated cost of facilities deemed necessary to accommodate such visitors and uses.

By Mr. SCHWEIKER:

S. 2078. A bill to amend the Internal Revenue Code of 1954 and the Social Security Act to provide an exemption

from coverage under the social security program, through a tax refund procedure, for employees who are members of religious faiths which oppose participation in such program, and to provide a similar exemption on a current basis (pursuant to waiver certificates filed in advance) for employers engaged in farming and their employees in cases where both are members of such faiths; and to make the existing exemption for self-employed members of such faiths available to certain additional individuals; to the Committee on Finance.

Mr. SCHWEIKER. Mr. President, I am today again introducing a bill to provide an exemption from the social security employment tax on wages for members of religious groups opposed to this type of insurance on religious grounds. I first introduced this legislation in the Senate as an amendment to the Social Security Amendments of 1970, and it was adopted by the Senate Finance Committee and passed by the Senate. It was dropped in conference with the House. The Senate has also seen this legislation as a separate bill and as an amendment to H.R. 1, the Social Security Amendments of 1972. To date this measure has twice passed the Senate only to be dropped in conference. Nevertheless, the issue incorporated in this bill is fundamental and I will continue my efforts to see it enacted into law.

I cite the Amish as an example of people who desire and should be afforded this social security exemption due to the religious objection to social security.

The Internal Revenue Code provides an exemption from self-employment tax, if a person can show he is a member of a recognized religious sect which follows the practice of making provisions for its dependent members. I now ask that this exemption be extended from self-employment tax to those who work for others and oppose, for religious reasons, payment of social security employment tax on wages.

As part of their religion, the Amish refuse any form of relief or what they call Government handouts. They oppose all forms of social security, including old-age pensions. Regarding it not as a tax but rather as a policy premium in a national insurance system, the Amish are opposed to participation, because of their conscientious objection to all forms of insurance. This belief is embodied in the Dordrecht Confessions, which predate our Constitution. One of the main tenets of the Amish faith is the expectation that the Amish live by faith and trust in providence. The church rejects any type of insurance as contradicting one's faith in God's ability to provide for the future. Otherwise the church counsels obedience to the state, which is why the Amish have no objection to the payment of general taxes.

Forcing people such as the Amish to pay a tax which is a form of insurance, directly opposed by the tenets of their faith, is an infringement of their religious rights, which by implication threatens the rights of all religious groups, no matter how small.

It is difficult for me to understand why we have not been ready to permit religious groups to conscientiously object to economic regulations when we fully recognize their right to object to military service.

I feel strongly that this Government must not ride roughshod over the religious rights of a minority. Such is the case under present law. In 1961, the Federal Government seized three horses belonging to an Amish farmer in Pennsylvania, and sold them at public auction to obtain money for social security payments which the man refused to make because of his religious convictions.

At that time I began my effort to assist the Amish people to get relief from participating in the social security program to which they are opposed on religious grounds. In 1961 and again in 1963, I introduced a bill in the House which would have provided an exemption from participation in the Federal old-age and survivors insurance program for those whose religious doctrines forbid participation in such a program.

In 1964, after the Treasury Department, as well as the Justice Department rendered legal opinions saying that the Old Order Amish exemption embodied in a social security amendment met all constitutional requirements and was strictly a matter of legislative policy, the House and Senate conferees agreed to accept the "Amish amendment." Unfortunately, this bill died in the conference committee because of the dispute over medicare. It did, however, lay the groundwork for the first relief granted to the Amish.

On July 30, 1965, Congress amended the Internal Revenue Code, allowing a person to apply for exemption from self-employment tax if he is a member of a recognized religious sect which follows the practice of making reasonable provision for its dependent members. We must now take this one step further, and provide an exemption from social security taxes on wages.

Specifically, my amendment provides that any member of a recognized religious sect in existence since at least 1950, who can show that he is an adherent of established teachings which cause him to be conscientiously opposed to acceptance of social security benefits, may file an application to be entitled to a credit or refund of the amount of the tax.

The applicant must submit evidence to substantiate his membership in the sect and his adherence to its teachings, and would be asked to show that it has been the practice of the sect to make provision for the care of its elderly or dependent members.

In addition, the employer would continue to pay into the social security fund, thus eliminating any chance that such an amendment would make one employee more desirable than another. The objective here obviously is not to make one group of people more desirable employees than another, but instead to assist those who object to social security coverage because it is directly opposed to basic religious tenets of their faith. Since the employer would continue to pay into the social security fund, the exempted employee would offer no financial advantage over the nonexempted employee.

Mr. President, I ask unanimous consent that the bill, together with material regarding the beliefs of the Amish people on social security, and a letter I received in 1964 from the Treasury Department on the constitutional issues involved in this exemption be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 2078

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a)(1) section 6413 of the Internal Revenue Code of 1954 (relating to special rules applicable to certain employment taxes) is amended by adding at the end thereof the following new subsection:

"(c) SPECIAL REFUNDS OF SOCIAL SECURITY TAX TO MEMBERS OF CERTAIN RELIGIOUS FAITHS.—

"(1) IN GENERAL.—An employee who receives wages with respect to which the tax imposed by section 3101 is deducted during a calendar year for which an authorization granted under this subsection applies shall be entitled (subject to the provisions of section 31(b)) to a credit or refund of the amount of tax so deducted.

"(2) AUTHORIZATION FOR CREDIT OR REFUND.—Any individual may file an application (in such form and manner, and with such official, as may be prescribed by regulations under this subsection) for an authorization for credit or refund of the tax imposed by section 3101 if he is a member of a recognized religious sect or division thereof described in section 1402(h)(1) and is an adherent of established tenets or teachings of such sect or division described in such section. Such authorization may be granted only if—

"(A) the application contains or is accompanied by evidence described in section 1402(h)(1)(A) and a waiver described in section 1402(h)(1)(B), and

"(B) the Secretary of Health, Education, and Welfare makes the findings described in section 1402(h)(1)(C), (D), and (E).

An authorization may not be granted to any individual if any benefit or other payment referred to in section 1402(h)(1)(B) became payable (or, but for section 203 or 222(b) of the Social Security Act, would have become payable) to such individual at or before the time of filing of such waiver.

"(3) EFFECTIVE PERIOD OF AUTHORIZATION.—An authorization granted to any individual under this subsection shall apply with respect to wages paid to such individual during the period—

"(A) commencing with the first day of the first calendar year after 1976 throughout which such individual meets the requirements specified in paragraph (2) and in which such individual files application for such authorization (except that if such application is filed on or before the date prescribed by law, including any extension thereof, for filing an income tax return for such individual's taxable year, such application may be treated as having been filed in the calendar year in which such taxable year begins), and

"(B) ending with the last day of the calendar year preceding the first calendar year in which (i) such individual ceases to meet the requirements of the first sentence of paragraph (2), or (ii) the sect or division thereof of which such individual is a member is found by the Secretary of Health, Education, and Welfare to have ceased to meet the requirements of subparagraph (B) of paragraph (2).

"(4) APPLICATION BY FIDUCIARIES OR SURVIVORS.—If an individual who has received wages with respect to which the tax imposed by section 3101 has been deducted during a calendar year dies without having filed an application under paragraph (2) an application may be filed with respect to such individual by a fiduciary acting for such individual's estate or by such individual's survivor (within the meaning of section 205(c)(1)(C) of the Social Security Act)."

(2) The heading of section 6413(c) of such Code (relating to special refunds) is amended by inserting "OF SOCIAL SECURITY TAX BASED ON MULTIPLE EMPLOYMENT" after "REFUNDS".

(3) Section 31(b)(1) of such Code (relating to credit for special refunds of social security tax) is amended by striking out "section 6413(c)" and inserting in lieu thereof "section 6413 (c) or (e)".

(b) Sections 201(g)(2) and 1817(f)(1) of the Social Security Act are each amended by striking out "section 6413(c)" and inserting in lieu thereof "sections 6413 (c) and (e)".

SEC. 2. (a) Subchapter C of chapter 21 of the Internal Revenue Code of 1954 (general provisions under Federal Insurance Contributions Act) is amended by redesignating section 3126 as section 3127, and by inserting after section 3125 the following new section:

"SEC. 3126. EXEMPTION FOR EMPLOYERS ENGAGED IN FARMING, AND THEIR EMPLOYEES, WHERE BOTH ARE MEMBERS OF RELIGIOUS FAITHS OPPOSED TO PARTICIPATION IN PROGRAM.

"(a) IN GENERAL.—Notwithstanding any other provision of this chapter (and under regulations prescribed to carry out this section), in any case where—

"(1) an employer is carrying on a trade or business in which, if it were carried on exclusively by employees, the major portion of the services would constitute agricultural labor as defined in section 3121(g),

"(2) such employer is a member of a recognized religious sect or division thereof described in section 1402(h)(1) and an adherent of established tenets or teachings of such sect or division as described in such section, and has filed and had approved under subsection (b) an application (in such form and manner, and with such official, as may be prescribed by such regulations) for an exemption from the taxes imposed by section 3111, and

"(3) at least one of the employees of such employer performing agricultural labor as defined in section 3121(g) is also a member of such a religious sect or division and an adherent of its established tenets or teachings, and has filed and had approved under subsection (b) a similar application for an exemption from the taxes imposed by section 3101,

such employer shall be exempt from the taxes imposed by section 3111 with respect to wages paid to any of his employees described in paragraph (3) for agricultural labor as defined in section 3121(g), and each such employee shall be exempt from the taxes imposed by section 3101 with respect to such wages paid to him by such employer.

"(b) APPROVAL OF APPLICATION.—An application for exemption filed by an employer under subsection (a)(2) or by an employee under subsection (a)(3) shall be approved only if—

"(1) such application contains or is accompanied by the evidence described in section 1402(h)(1)(A) and a waiver described in section 1402(h)(1)(B),

"(2) the Secretary of Health, Education, and Welfare makes the findings (with respect to such sect or division) described in section 1402(h)(1) (C), (D), and (E), and

"(3) no benefit or other payment referred to in section 1402(h)(1)(B) became payable (or, but for section 203 or 222(b) of the Social Security Act, would have become payable) to the individual filing the application at or before the time of such filing

"(c) EFFECTIVE PERIOD OF EXEMPTION.—An exemption granted under this section to any employer with respect to wages paid to any of his employees, or granted to any such employee, shall apply with respect to wages paid by such employer during the period—

"(1) commencing with the first day of the first calendar quarter, after the quarter in which such application is filed, throughout which such employer or employee meets the applicable requirements specified in subsections (a) and (b), and

"(2) ending with the last day of the calendar quarter preceding the first calendar quarter thereafter in which (A) such employer or the employee involved ceases to meet the applicable requirements of subsection (a), or (B) the sect or division thereof which such employer or employee is a member is found by the Secretary of Health, Education, and Welfare to have ceased to meet the requirements of subsection (b)(2)."

(b) The table of sections for such subchapter is amended by striking out the item relating to section 3126 and inserting in lieu thereof the following new items:

"Sec. 3126. Exemptions for employers engaged in farming, and their employees, where both are members of religious faiths opposed to participation in program.

"Sec. 3127. Short title.".

SEC. 3. Section 202(v) of the Social Security Act is amended—

(1) by inserting "(1)" after "(v)"; and

(2) by adding at the end thereof the following new paragraph:

"(2) Notwithstanding any other provisions of this title, in the case of any individual who files a waiver pursuant to section 6413(e) of the Internal Revenue Code of 1954 and is granted an authorization for credit or refund thereunder or who files an application under section 3126(a)(3) of such Code and is granted an exemption from the tax on employees thereunder, no benefits or other payments shall be payable under this title to him, no payments shall be made on his behalf under part A of title XVIII, and no benefits or other payments under this title shall be payable on the basis of his wages and self-employment income to any other person, after the filing of such waiver or application; except that if therafter such individual's authorization under such section 6413(e) of such Code or exemption under such section 3126(a)(3) of such Code ceases to be effective, such waiver or application shall cease to be applicable in the case of benefits and other payments under this title and part A of title XVIII to the extent based on his wages beginning with the first day of the calendar year or calendar quarter for which such authorization or exemption ceases to apply and on his self-employment income for and after his taxable year which begins in or with the beginning of such calendar year or calendar quarter."

SEC. 4. (a) Section 1402(h)(1) of the Internal Revenue Code of 1954 (relating to exemption from self-employment coverage for members of certain religious faiths) is amended by striking out "private or".

(b)(1) Section 1402(h)(2) of such Code (relating to time for filing application) is amended to read as follows:

"(2) TIME FOR FILING APPLICATION.—For purposes of this subsection, an application must be filed—

"(A) on or before the time prescribed for filing the return (including any extension thereof) for the first taxable year for which the applicant has self-employment income (determined without regard to this subsection and subsection (c)(6)), or

"(B) on or before the time prescribed for filing the return (including any extension thereof) for the first taxable year ending after the amendment of this paragraph in 1977.

whichever is later; except that an application filed after the time specified in subparagraph (A) or (B) (whichever is applicable) but on or before the last day of the third calendar month following the calendar month in which the taxpayer is first notified by the Secretary or his delegate that a timely application for an exemption from the tax imposed by this chapter has not been filed by him shall be deemed to be filed timely."

(2) Section 1402(h)(3) of such Code (relating to period for which exemption is effective) is amended—

(A) by striking out the period at the end of subparagraph (B) and inserting in lieu thereof a semicolon; and

(B) by adding at the end thereof (after and below subparagraph (B)) the following: "and except that no refund or credit of any amount of tax imposed by this chapter shall be due or payable by reason of any such exemption."

SEC. 5. The amendments made by the first section of this Act shall apply with respect to wages paid in taxable years beginning after December 1976. The amendments made by section 2 of this Act shall apply with respect to wages paid in calendar quarters beginning after June 1977. The amendments made by section 3 of this Act shall apply with respect to benefits paid for (and items and services furnished in) months after June 1977. The amendments made by section 4 of this Act shall apply with respect to taxable years ending after the date of the enactment of this Act.

BACKGROUND OF THE PROGRAM

The following background information indicates the basic nature of the social security program, the general character of religious objections to participation in social security, and the present situation of the Old Order Amish in relation to social security.

COMPULSORY NATURE OF SOCIAL SECURITY

The social security program is designed to provide old-age, survivors, and disability insurance protection for American families, regardless of family size, income, or other factors. Under this program workers (and their employers) and the self-employed contribute while working so that the contributor and his family may have a continuing income when earnings cease or are greatly reduced because of retirement in old-age, long-term disability, or death. About 9 out of 10 working people and their families are covered under the program.

Social security can carry out its purpose only under conditions of compulsory coverage. Compulsory coverage assures that there will be a given distribution of what might be called poor risks—those who will get considerably more than they pay in—and good risks. Under a voluntary program, there would be an unduly high proportion of poor risks. Many people could predict with reasonable certainty whether or not they would get a large return on their contributions and those choosing coverage would generally be the ones who could expect to receive benefits bargains. This would increase the cost of the program for all who participate. Those given a choice as to coverage would have an unfair advantage over those workers and employers whose coverage would continue to be on a compulsory basis and who would have to help bear the increased cost arising from the individual voluntary coverage. Moreover, under individual voluntary coverage, many who need social security protection most would not participate. Many

low income workers would choose not to pay the contributions because of the press of day-to-day financial problems, although in the long run social security protection would be especially valuable to such workers and their families.

Individual voluntary coverage is now provided under social security only in respect to services performed in the exercise of the ministry (including the performance of the duties of a Christian Science practitioner). The exclusion from coverage of such services (where coverage is not elected) is not a personal exclusion but an occupational exclusion. Thus, a minister who engages in any employment or self-employment other than the exercise of the ministry—whether or not he elects coverage of his ministerial services—is covered on the same basis as all other persons. Once a minister elects coverage of his services in the ministry, the election is irrevocable and once the time for election passes, a minister who has not elected coverage may no longer do so.

RELIGIOUS OBJECTIONS TO COVERAGE UNDER SOCIAL SECURITY

Representatives of those divisions of the Amish Mennonites generally classed as Old Order Amish (with some 19,000 adult members) have objected to social security taxes on grounds that social security is a form of insurance, and that their participation in an insurance program would show mistrust in the providence and care of God to meet future needs. This basis for objection is shared by the Old Order Mennonites (about 5,000 members) by at least some of the followers of Father Divine (some 300,000 members), and by an unknown number of small sects, such as the Hutterites (a Mennonite group with 2,300 members, who practice communal living) and the division of the Plymouth Brethren known as Executives.

Another religious basis for opposing participation in social security is adherence to a principle of separatism—the belief that one's sect or group should keep apart from all other persons. The Old Order Amish, for example, place great importance on the scriptural admonition: "Be ye not unequally yoked together with unbelievers; for what fellowship hath righteousness with unrighteousness? and what communion hath light with darkness?" Separatism is also a cardinal principle of some groups which have not indicated their attitudes toward social security; for example, the Black Muslims, perhaps the prime exponents of separatism, and Jehovah's Witnesses, with 287,000 members in the United States, all of whom are held by the sect to be ministers. There would seem to be considerable doubt that participation in social security is compatible with the belief of Jehovah's Witnesses that the end of the world is close at hand—1984, at latest—and objections to social security have been received from individual members from time to time.

Each of the above-mentioned groups has come into conflict with Federal or State law on questions other than social security. All oppose compulsory military service, and there have been various other conflicts with State or local laws, such as the refusal of the Old Order Amish to permit their children to attend school beyond the 8th grade, and the refusal of Jehovah's Witnesses and the Black Muslims to salute the flag.

The Christian Science Church opposed provision of disability benefits under social security on religious grounds.

Amish who do not belong to old order groups—e.g., a category known as Beachy Amish—have adopted relatively modern ways of living, and are apparently not opposed to social security. There continue to be cleavages in which Old Order Amish communities, or segments of communities, split off to adopt more modern ways of living. One-third or more of the offspring of Old Order Amish parents do not continue in the sect. As in virtually any group there are marginal members, some of whom eventually become separated from the sect. The Amish strive continually to maintain their communities against worldly temptations; and effective means of maintaining has been their stand against high school education and their doctrine of shunning,[1] with its grave economic implications for individuals who are so ill equipped to prosper outside the community.

The Old Order Amish relate practically every detail of their way of living to religious beliefs, which in turn are based on literal interpretation of scriptural texts. The Old Order Amish attempt to pursue a life similar in its course to that of the German peasants of perhaps the 17th or 18th century. The farm way of life is justified on religious grounds because being "in the country" separates the group from more worldly, less firm followers of Scripture. Consideration has been given to the use of nonmechanized farming methods as one way of differentiating (in proposed legislation) the Old Order Amish from other religious objectors to social security. But even among the Old Order Amish there have been various concessions to the changing times. For example, though a tractor may not be used in the field, it is permissible to use a tractor to furnish belt power. The Old Order Amish farmer is generally allowed to have one- or two-cylinder gasoline motors for his farm operations. The Old Order Amish make a significant distinction between owning and merely using modern conveniences. For example, in some communities it is permissible to have electric current and appliances in a mortgaged home but not after the mortgage is paid off. A significant distinction is also made between members of the sect and those who are members of the Amish community but not members of the sect—for example, Amish youngsters, who do not become members of the Old Order Amish until they are baptized (which usually occurs in their later teens). A case has been described in which a young man deferred baptism for a period of time so as to enable continued ownership of an automobile and a tractor, with which he not only provides transportation for his numerous family and neighbors but also works his father's large farm and many of his neighbors.'[2]

HISTORY OF THE PROBLEM

The problem of the Old Order Amish with social security dates mainly from 1965 when coverage of self-employed farm operators began. (However, some members of the sect who take employment in town have been covered as far back as 1937.) Although the benefits must be accepted, the Old Order law does not require that social security Amish bishops assert that required payment of social security taxes obliges their members to participate in the social security program—an insurance program—and thus to act contrary to their religious beliefs. Though the social security tax provisions are not included with the benefit provisions in the Social Security Act, but are part of the Internal Revenue Code, the bishops seem to look upon the social security taxes as in the nature of a personal premium paid for insurance. The bishops believe that their members should pay other types of taxes, pursuant to the scriptural admonition to "render unto Caesar the things that are Caesar's." In general, the creed of the sect (also held by some other groups) dictates that members should obey civil laws except where they "militate against the law, will, and commandments of God."[3]

[1] "Amish Society," by John A. Hostetler, p. 144.

[2] "Our Amish Neighbors," by William L. Schreiber, p. 77.

The religious objection to the insurance principle is not clear cut. For example, the Older Order Amish make systematic arrangements for protection against property loss from fire, storm, and other causes, under which, after a loss occurs, members contribute labor and make a monetary contribution related to their net worth. One such group arrangement, known as the Amish Mutual Fire Insurance Association of Atglen, Pa., was organized by the Older Order Amish of Lancaster County in 1875 and was licensed as an insurance company in Maryland and Pennsylvania. The Old Order Amish do not consider this type of arrangement to be insurance because there is no advance funding. Liability insurance is apparently not considered to be contrary to their religious beliefs—a conclusion based on the view that liability insurance provides indemnity not to the insured but to the party suffering damages. It seems clear, however, that the Old Order Amish are strongly opposed to life insurance even though the survivors, not the insured, are protected under it.[4]

OLD ORDER AMISH

The 19,000 Old Order Amish Mennonites live in about 270 communities in 19 States. The communities are known as church districts; however, there are no meeting houses and worship is conducted in private homes. Each community is headed by a bishop. There is no hierachy above the bishops and no formal organization among the various communities. Thus each bishop is able to interpret doctrine independently of views held in other communities.

There is no question, of course, as to the sincerity of the assertion of the Old Order Amish bishops that participation in social security is contrary to their religious beliefs, and a number of the Amish farmers carry out this objection to the point of open refusal to pay social security taxes and active resistance to the execution by the Government of liens on their bank account to satisfy unpaid taxes. During many discussions with representatives of the Social Security Administration, the bishops have consistently refused to consider any compromise solution short of exclusion from social security coverage. On the other hand, a number of individual members of the sect have claimed old-age insurance benefits under social security when they became eligible for such benefits. It appears that at least some of the Old Order Amish—particularly, younger members are undergoing a change in attitude toward social security and are coming to regard it as a good thing. This is quite consistent with their increasing acceptance of various innovations of the 20th century.

As noted, the problem of those Old Order Amish who actively resist social security coverage is related mainly (though not entirely) to the social security self-employment tax. The enforcement problem was thrust on the

[3] "The Dordrecht Confession (1632)." In reference to civil governments, this confession also directs believers "faithfully to pay it custom, tax and tribute." One article of the confession forbids defense by force.

[4] The first reference to insurance in basic documents related to Amish religious background appears in "Christian Fundamentals," adopted by the Mennonite General Conference in 1921, which states that "life insurance is inconsistent with filial trust in the providence and care of our heavenly Father." A more recent commentary, in "The Mennonite Encyclopedia," explains: "This refers to commercial life insurance only. The (Mennonite) brotherhood has a growing awareness of its obligation to make systematic provision for the economic needs of its members including financial assistance for the widows and orphans in event of serious incapacity or death."

national scene when one Amishman, Valentine Y. Byler, of New Wilmington, Pa., who had no bank account, could not be persuaded to pay his tax for the years 1956–59. In the spring of 1961 the Government seized three of his six plow horses, sold them at public auction, and applied the proceeds against his outstanding liability. After consultation with an attorney who had become interested in civil liberties cases, Mr. Byler brought suit on the grounds of infringement of the freedom of religion guaranteed under the first amendment.

Given assurance that the constitutionality of the tax would be tested in court, and that the statute of limitations on collection of taxes would be waived by the Amish, the Commissioner of Internal Revenue agreed in October 1961, to suspend all forceful collection of tax until the issue was resolved in court. On January 21, 1963, the suit was dismissed with prejudice on motion of the plaintiffs, Mr. and Mrs. Byler. (This action was apparently based on religious objections to participating in litigation, and was taken without consultation with the plaintiff's attorney.) As an alternative course, Old Order Amish bishops appealed to the Congress and bills were introduced during the 87th Congress to exempt them from the tax. The Treasury Department and the Department of Health, Education, and Welfare pointed out objections to these bills on administrative and precedent grounds. During consideration by the 87th Congress of H.R. 10606, the Public Welfare Amendments of 1962, one of these bills (S. 2301) was adopted as a Senate amendment but was dropped in conference.

Although the suit to test the constitutionality of the self-employment tax as it applies to the Old Order Amish was never tried, the moratorium on the collection of tax has not been terminated by the Internal Revenue Service. According to the most recent report of the Service, there are some 1,500 delinquent Amish accounts, the delinquencies ranging for the most part for periods from 1 to 3 years and involving nearly $250,000 in tax liabilities.

The moratorium was intended as a temporary measure. Since tax liabilities are not satisfied but only postponed by this moratorium, it cannot be extended for too long a period of time. The 6-year period of limitation on collection of tax will expire this year in some cases. Some Old Order Amish have already indicated that they would not sign waivers to extend the collection period. The Government, therefore, in these cases soon will be forced to take action for the collection of taxes due from these individuals or else allow its collection rights to lapse.

TREASURY DEPARTMENT,
Washington, August 12, 1964.

HON. RICHARD S. SCHWEIKER,
House of Representatives,
Washington, D.C.

DEAR MR. SCHWEIKER: I am enclosing herewith the opinion of Mr. Berlin, the General Counsel of the Treasury Department, relating to the constitutionality of optional exemption of members of a certain religious faith from the social security self-employment tax or optional recovery of the tax paid.

Sincerely yours,

STANLEY S. SURREY,
Assistant Secretary.

THE GENERAL COUNSEL
OF THE TREASURY,
Washington, D.C., August 6, 1964.

CONSTITUTIONALITY OF OFFICIAL EXEMPTION OF MEMBERS OF A CERTAIN RELIGIOUS FAITH FROM THE SOCIAL SECURITY SELF-EMPLOYMENT TAX OR OPTIONAL RECOVERY OF THE TAX PAID

Legislation has been proposed in the present and the previous Congress to provide optional exemption with the social security self-employment tax for "a member or adherent of a recognized religious faith whose established tenets or teachings are such that he cannot in good conscience without violating his faith accept the benefits of insurance," upon a finding by the Secretary of Health, Education, and Welfare that his application for exemption was made in good faith and that the members of such religious faith make adequate provision for elderly members to prevent their becoming public wards.[1] Senators CLARK and SCOTT, among the chief proponents of this legislation, have explained that the faith in question is that of those Amish Mennonites who are known as the plain people or Old Order Amish who live in relative independence and isolation in rural communities and adhere strictly to many literal biblical injunctions, including reliance on divine providence for their care. The consistency and sincerity of the sect is attested to by the refusal of most of their members to accept social security benefits or pay the self-employment tax.

In consideration of these bills in Congress, the question was raised as to whether the proposed exemption would be constitutional and the views of the Treasury Department were requested. This opinion is in response to that request. Since then, additional legislative proposals, including an alternative proposal of relief for the Amish in the form of tax recovery in place of tax exemption, have been discussed in a joint statement by the Treasury Department and the Department of Health, Education, and Welfare, entitled "Request of the Old Order-Amish for Exemption from the Social Security Self-Employment Tax," which was transmitted to interested Members of Congress by a joint letter dated July 20, 1964. In connection with the earlier request, it is also appropriate to consider the constitutionality of these proposals as well as the constitutionality of the various limitations included, or suggested for inclusion in the definition of the faith whose members or adherents would be eligible for exemption. The joint statement referred to above reviews the religious tenets and modes of life of these Amish and provides an extended analysis of the social security system and the possible effects of an exemption. I will not, therefore, in this opinion cover any of this factual material. A copy of this joint statement is attached hereto.

CONCLUSION ON TAX EXEMPTION AND TAX RECOVERY

My conclusion, based upon a review of the principles of constitutional law, is that there is no valid constitutional objection to the proposed exemption and that the question of exemption is one of public policy for Congress to determine. After discussion of the grounds for this conclusion I will review in the latter part of this opinion the constitutionality of various proposed additional limitations upon the exemption.

This conclusion concerning tax exemption comprehends any provision by Congress for tax recovery, since tax exemption is the most complete relief that could be given. In the subsequent discussion, therefore, the constitutional conclusions with respect to the requirements of uniformity, of the first amendment, and of due process should be read as also extending to a provision for tax recovery.

Congress and the States have provided for the recovery of taxes in various situations where for reason of public policy the legislature has determined this to be appropriate. I have found no constitutional challenge of these provisions. For example, 26 U.S.C. 6420 provides for refund of the gasoline taxes paid for gasoline used for farming purposes. A similar provision in the Virginia Code, section 57–715 (Supp. 1964), includes refunds for gasoline used for public or nonsectarian school buses. Title 26 U.S.C. 6418 provides for refund of the Federal tax on sugar manufactured in the United States to those who use such sugar as livestock feed or in the distillation of alcohol.

If members of the designated religious faith were permitted to choose to recover in monthly installments the amount, and only the amount, of the social security taxes they have paid, they would be under a limitation which operated to their disadvantage as compared with other social security taxpayers to whom an indefinite amount of social security recovery would be available in the form of insurance. Consequently, it would seem that no other social security taxpayer would be in a position to claim that the tax recovery allowed to the Amish in any way discriminated against him or added to his tax burden.

1. The requirement of uniformity: The Constitution provides in article I, section 8, clause 1: "The Congress shall have power to lay and collect taxes, duties, imposts, and excise, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts and excise shall be uniform throughout the United States; * * *." This canon of uniformity has been long established to be a requirement of geographical uniformity only *Knowlton* v. *Moore*, 178 U.S. 41 (1900); *Bushaber* v. *Union F., Co.*, 240 U.S. 1 (1916); *Fernandez* v. *Weiner*, 326 U.S. 340 (1945). Insofar as uniformity may be required as an element of reasonableness under the due process clause, the problems are dealt with in my discussion of the application of that clause.

2. The first amendment: The proposed exemption, if allowed, would represent a determination by Congress that an accommodation of the self-employment tax law to prevent offense to religious scruples against insurance would not be contrary to public policy. The first amendment provides that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; * * *." The question is whether an exemption from the social security tax would be constitutional as an accommodation or mitigation of a general requirement in order to permit the free exercise of a religion or whether it would be an "aid" to the specified religion at the expense of other religions and therefore be an unconstitutional establishment of religion.

It is my conclusion that the proposed exemption would in all probability be held to be a valid accommodation of the general law to permit religious liberty under the free excise clause. The subsidiary question whether the definition of the persons exempted may be a reasonable classification under the due process clause is discussed in a subsequent part of this opinion. I base my conclusion on the following decisions of Federal and State courts, particularly the Supreme Court, which interpret the first amendment to permit accommodations to religious beliefs. This discussion will be followed by an analysis of those cases which hold that certain government action is a violation of the establishment clause, in order to make clear that this exemption would not be an establishment of religion.

The classic example of the application of the free exercise clause is the series of cases which have upheld congressional exemption of conscientious objectors from military service. The validity of this exemption was first established by the *Selective Draft Law Cases*, 245 U.S. 366 (1919) upholding the exemption in the draft law of members of religious sects "whose tenets prohibited the

---

[1] S 294, 88th Cong., H.R. 10606, 87th Cong., among others.

moral right to engage in war." The Solicitor General had argued (p. 374) that this exemption did not establish such religions but simply aided their free exercise. The court considered that the Congressional authority to provide such exemption was so obvious that it need not argue the point (p. 389–390).

The present Universal Military Training and Service Act enacted June 24, 1948, c. 625, 62 Stat. 604, as amended, in section 6(j), 50 U.S.C. App. 456(j), exempts from combatant training and service in the Armed Forces a person "who by reason of religious training and belief, is conscientiously opposed to participation in war in any form." This exemption continues to be recognized as constitutional under the free exercise clause, *Clark* v. *United States*, 236 F. 2d 13 (9th Cir. 1956), cert. denied, 352 U.S. 882 409 (2d Cir. 1963), cert. granted 32 L.W. 3385, May 5, 1964. Certiorari was granted in the Jakobson case and in two other conscientious objector cases,[2] apparently in order to reconcile the conflict between the second and ninth circuits as to whether the statutory definition of "religious training and belief" as being a "belief in a relation to a Supreme Being" may constitutionally be applied to exclude a conscientious objector whose belief is based on humanistic principles. This conflict is one essentially concerned with reasonable classification of an exemption under the due process clause, discussed below. It does not concern the constitutional right of Congress to exempt conscientious objectors under the free exercise clause.

In the Jakobson case the second circuit faced the problem whether "making exemption from military service turn on religious training and belief as stated in section 6(j) aids religions, and more particularly religions based on a belief in the existence of God" (p. 414) and thereby conflicts with the holding in *Torcaso* v. *Watkins*, 367 U.S. 488 (1961). There it was determined that Maryland could not require an oath affirming a belief in God as a prerequisite to becoming a notary public. The Jakobson court concluded that "the important distinction seems to us to be that, in contrast to Maryland's notary public oath, Congress enacted this statute, in mitigation of what we assume to be the constitutionally permissible course of denying exemptions to all objectors, for the very purpose of protecting "the free exercise or religions by those whose religious beliefs were incompatible with military service which Congress had the right to require" (pp. 414–415).

An exemption identical with that in the 1948 military training act was specifically included in section 387(a) of the Immigration and Naturalization Act of June 27, 1952, c. 477, 66 Stat. 163, 258, 8 U.S.C. 1448(a). This statutory exemption followed the decision of the Supreme Court in *Girouard* v. *United States*, 328 U.S. 61 (1946) ruling that the naturalization law need not be, and should not be, interpreted to exclude an alien who would not promise to bear arms because of religious scruples. Justice Douglas, for the majority, reaffirming principles enunciated in early dissents by Justices Hughes and Holmes, said, "The struggle of religious liberty has through the centuries seen an effort to accommodate the demands of the state to the conscience of the individual" (p. 68).

The general exemption from taxation of religious groups, activities and property is another example of the exercise by legislatures of the constitutional authority to make exemptions to aid in the free exercise of religion, which continues to be upheld against contentions that the exemption operates to establish the religions this benefited.[3] Under this exemption a unique religious doctrine may make an activity of one religious group exempt as having a religious purpose which would not be exempt when carried on by other groups not holding to the doctrine.[4] The exemption from taxation of religious activities and occupations is incorporated into the Social Security Act itself which provides optional exemptions for ministers, Christian Science practitioners, employees of religious organizations and members of religious orders (26 U.S.C. 1402 (c) and (e) and 3121(b)(8)).

A further illustration of the principle that a legislature may accommodate particular religious beliefs without violating the first amendment is the case of *Zorach* v. *Clauson*, 343 U.S. 306 (1952). Here the Supreme Court held that the New York Legislature did not violate the establishment clause by authorizing public schools to release children 1 hour early every week for religious instruction off the school grounds. It said:

"When the State encourages religious instruction or cooperates with religious authorities by adjusting the schedule of public events to sectarian needs, it follows the best of our traditions. For it then respects the religious nature of our people and accommodates the public service to their spiritual needs" (pp. 313–314).

The distinction between *Zorach and McCollum* v. *Board of Education*, 333 U.S. 203 (1948) well illustrates the distinction between the two first amendment clauses for in McCollum the released time plan was held unconstitutional as an establishment of religion as classrooms and the force of the school were used in that plan.

The most important case, for our purposes, is the recent Supreme Court decision in *Sherbert* v. *Verner*, 374 U.S. 398 (1963). In this case the Court required South Carolina to accommodate the requirements of its unemployment compensation law to the religious scruples of an adherent of a particular sect, the Seventh-day Adventists. In three separate opinions the members of the Court balanced the demands of the free exercise clause against the prohibitions of the establishment clause. The opinion and the concurring opinion determined that the denial of unemployment benefits to a person unavailable for suitable work on Saturday because, being an Adventist she could not for religious beliefs work on Saturday, was a restriction on the free exercise of her religion and, therefore, unconstitutional. The dissenting opinion contended that the accommodations of Adventists was a question of policy for the legislature and that while the legislature could constitutionally exempt the Adventist from the requirements for eligibility placed upon all other persons the legislature was not required to do so. Consequently, the full court apparently would agree that Congress could constitutionally make an exception from the general requirements of taxation and compulsory insurance of persons who because of religious scruples are unwilling to accept social security insurance. It is solely the constitutional ability of Congress to make this exemption to which this opinion is addressed.

The reasoning in the Sherbert case needs to be examined as it bears upon the power of Congress in this area. The principle of accommodation of a general law to a particular religious scruple is the same in this situation as in Sherbert though the facts differ in that in the Sherbert case the accommodation was for the purpose of enabling the Adventist to receive welfare benefits and in the Amish situation the accommodation would be for the purpose of exemption the Amish from benefits as well as from taxation for these benefits.

First, the Court says that while "the consequences of such a disqualification to religious principles and practices may be only an indirect result of welfare legislation" and that no criminal sanctions compel work on Saturday, the indirect discrimination is nevertheless a burden on the free exercise of the Adventist's religion. It requires her to abandon her religious precept or forgo a welfare benefit generally available (pp. 403, 404). In the social security situation the employment tax is supported by civil and criminal sanctions of assessed penalties and fine, imprisonment and forfeiture, so that the justification for congressional relief is even clearer.

Second, the court points out that while the State may not discriminate invidiously between religions the accommodations required to be allowed to the Adventist would not be discriminatory, but rather would remove a discrimination based upon her religion, since the law does not disqualify persons who do not work on Sundays (at 406). An exemption for those sects which cannot in good conscience accept the insurance for which they are taxed would not be an invidious discrimination against other religions which have no such scruple and whose members are therefore able to accept the insurance for which they are taxed.

Third, the court pointed out that the administrative problems concerned and the possibility of spurious claims do not justify a restriction on the free exercise of religion (at 407).

Then the court concludes (at 409) that its holding does not foster the "establishment" of the Seventh-day Adventist religion in South Carolina for the extension of unemployment benefits to Adventists is not like the involvement of religions with secular institutions which the establishment clause is designed to forestall as shown in its decision announced the same day. *School District of Abington Township* v. *Schempp*, 374 U.S. 203 (June 17, 1963). In fact the Sherbert ruling reversed the State court ruling that allowance for the religious obligation of the Adventist would be an unconstitutional discrimination in her favor. See *Sherbert* v. *Verner*, 240 S.C. 286, 125 S.E. 2d 737, 746 (1962).

In the Schempp and its companion case, *Murray* v. *Curlett*, decided with the same opinion, the court found that the States were establishing religion in their public schools by requiring Bible reading and the recitation of prayers therein. These decisions are developments of the prior term's opinion in *Engel* v. *Vitale*, 370 U.S. 321 (1962 holding that the requirement of recitation in the public schools of a State-authored prayer was a violation of the establishment clause which prohibits the Government from placing its "power, prestige, and financial

[2] *United States* v. *Seeger*, 326 F. 2d 846 (2d Cir. 1064), and the *Jakobson* case, compared with *Peter* v. *United States*, 324 F. 2d–173 (9th. Cir. 1963). The *Peter* case followed *Etcheverry* v. *United States*, 320 F. 2d 873 (9th Cir. 1963) on which certiorari was denied, 375 U.S. 320 (1963). The influence of the 2d circuit against the definition is shown in *MacMurray* v. *United States*, 330, F. 2d 928 (9th Cir. 1964).

[3] *Swallow* v. *United States*, 325 F.2d 97 (10th cir. 1963); *General Finance Corp.* v. *Archetto* (R.I. 1961) 176 A. 2d 73, appeal dismissed, 369 U.S. 423 (1962); *Fellowship of Humanity* v. *County of Alameda*, 315 P. 2d 394 (Cal. Dist. Ct. App. 1957); *Lundberg* v. *County of Alameda*, 298 P.2d 1 (Cal. 1956), appeal dismissed. sub. nom., *Heisey* v. *County of Alameda*, 352 U.S. 921 (1956).

[4] "Golden Rule Church Association," 41 T.C. 719 (1964), (Nonacq. May 19, 1964).

support * * * behind a particular religious belief" (p. 431). In the Schempp case the court develops the idea that Government must remain "neutral," a term derived from the 5-to-4 decision in *Everson* v. *Board of Education*, 330 U.S. 1 (1947). In its context in the several Establishment cases this term means an inability of the State to use its powers to require religious observances or to use public funds for the support of religious institutions. None of the holdings applies the establishment clause to forbid the granting of an exemption from Government coercion of a secular action to accommodate religious scruples under the free exercise clause. The latter clause is predicated, says the Schempp court, on Government coercion which impinges on religious practice, 374 U.S. at 223. The distinction between these two historic lines of decisions has permitted the Schempp case to be decided consistently with the Sherbert case on the same day.

In sum, then, an exemption removes a handicap to the free exercise of a particular religion placed upon it by force of Government; it is not a requirement by the Government that the particular religion be practiced or observed or supported by nonadherents.

The meaning of the Sherbert case is made unmistakable in its application by the court in the recent case. *In re Jension*, 375 U.S. 14 (1933). Here the court "in the light of *Sherbert* v. *Verner*" vacated the judgment of the Minnesota Supreme Court in *In re Jenison*, 265 Minn. 96, 120 N.W. 2d 515 (1963). The Minnesota court had held a person selected for jury duty in contempt of court for refusing to serve on the jury because of a religious belief based upon the biblical injunction against judging other persons. The Minnesota court had reasoned that jury duty, being a primary duty of all citizens, was superior to a religious belief deemed by the court contrary to public order, citing *Reynolds* v. *United States*, 98 U.S. 145 (1878) which held that Congress could prohibit polygamy as a violation of the social order.

Since the Supreme Court has now held the Government must accommodate even the highest duties of citizens to sincere religious scruples, it is probable that it would hold that Congress may accommodate the religious scruple against insurance by allowing for such a scruple an optional exemption, or a lesser form of relief, from social security taxation and benefits.

3. The due process clause: Under the due process clause of the fifth amendment tax statutes must provide reasonable classifications of the subjects taxed or regulated and reasonable exemptions, if exemptions are provided. But, as has been firmly established by the Supreme Court, particularly in cases upholding the various exemptions provided in the Social Security Act and State unemployment compensation acts (*Carmichael* v. *Southern Coal Co.*, 301 U.S. 495 (1937); *Stewart Machine Company* v. *Davis*, 301 U.S. 543 (1937); *Helvering* v. *Davis*, 301 U.S. 619 (1937)), the outer bounds of what is a reasonable tax or exemption classification allow a wider play of legislative judgment than may other areas of the law where the "reasonable" standard is applied. In these cases the court assured legislatures that they had the widest powers of selection and classification in taxing some at one rate, others at another and exempting others altogether, where distinctions were based upon "considerations of policy and practical convenience."

Claims of discriminatory treatment under social security continue to be rejected as not "patently arbitrary." *Flemming* v. *Nestor*, 363 U.S. 603, 611 (1960). Recently, *Smart* v. *United States*, 222 F. Supp. 65 (S.D.N.Y. 1963), upheld a higher tax on (American) employees of the United Nations, as the means employed bore a substantial and logical relation to the objective; and *Lesson* v. *Celebreze*, 225 F. Supp. 527 (E.D.N.Y. 1963), accepted differences in dependency determination for children of a deceased mother from that for children of a deceased father, based on family support experience. See also *Cape Shore Fish Co.* v. *United States*, 303 F. 2d 961 (Ct. Cl. 1964), and *Abney* v. *Campbell*, 206 F.2d 836 (5th Cir. 1953) on fishing vessel employment differences and on domestic service differences respectively.

The requirement that exemptions have a reasonable basis applies as well to exemptions based upon religious scruples provided by Congress in conformity with the first amendment. In a nontax area this requirement has been recently reviewed in the second circuit decisions, pending review in the Supreme Court, on the reasonableness of the selective service definition of religious training and belief as being confined to belief in a Supreme Being, *United States* v. *Jakobson*, 325 F. 2d 409 (2d Cir. 1963) and *United States* v. *Seeger*, 326 F. 2d 846 (2d Cir. 1964); certiorari granted in both cases, 32 L.W. 3385, May 5, 1964. In these cases the court determined that an exemption from bearing arms based on religious belief was a constitutional accommodation of religion, but that a restriction of the definition of religion to a Supreme Being was too narrow in view of its conclusion that a conscience sincerely compelled to refrain from bearing arms because of a "mystical force of 'Godness' " or a "compulsion to follow the paths of 'goodness' " might be religious in nature (Seeger, p. 853). In other words, at least in the second circuit, the exemption on the grounds of religious objection must reach all who have sincere objections which could be interpreted as religious in nature.

In the social security situation, however, a classification may be as limited as circumstances require, as indicated in the Smart and other cases, supra.

In fact the Social Security Act and its amendments have characteristically carved out exemptions which are as narrow as required by the sociological facts, including differences among vocations and religious attitudes. Thus, for example, lawyers are covered by the self-employment tax, ministers, including Christian Science practitioners, are optionally covered, but doctors and persons who have taken the vow of poverty as a member of a religious order are completely exempted (26 U.S.C. 1402 (c) and (e), and 42 U.S.C. 411(c) (4) and (5)). When the self-employment tax was passed in 1950 the act excluded the performance of service by a minister of a church or a member of a religious order or by a Christian Science practitioner in the exercise of their callings, in order to avoid impairment of religious liberty (Senate Finance Committee hearings on H.R. 6000, 81st Cong., Jan. 17, 1950, pt. 1, pp. 1 and 3). The exemption was made optional in the 1954 amendment of the act for these classes of persons except the mendicant orders. These exemptions have not been challenged.

The reason for the present proposal to exempt members of religious sects, as such, is solely that they have a religious objection to receiving insurance. Accordingly, a classification of such sects, for exemption purposes, with appropriate safeguards, would reach all those whom Congress would have a reasonable ground to exempt and would, therefore, not be arbitrary nor violative of due process.

This conclusion is the basis of the opinion of the staff of the Joint Committee on Internal Revenue Taxation and that of the American Law Division of the Library of Congress provided to Senator CLARK under dates of November 9, 1962, and September 19, 1962, respectively. These options conclude that the proposed exemption would be constitutional as it would apply to all those who fall within the classification and that the classification is reasonable, 109 CONGRESSIONAL RECORD, 643, 464 (1963). A copy of these opinions as reproduced in the CONGRESSIONAL RECORD is attached.

Since, therefore, Congress may exempt those members of a religious faith who have scruples against receiving insurance, the next question is what practical safeguards Congress may designate to assure that only those who come within the policy of the exemption obtain the exemption, without imposing arbitrary limitations.

LIMITATIONS ON THE EXEMPTION

The joint statement by the Treasury Department and the Department of Health, Education, and Welfare reviewing the problems created by the proposed exemption for the Amish contains in section 3 suggested additional limitations upon the exemption. These limitations are proposed as possible means to protect the social security system from an unintended extension of exemptions from compulsory insurance which would weaken and dilute it. The extensions of the exception might occur, according to this joint statement, either through the formation of additional faiths claiming opposition to acceptance of benefits as one of their tenets or through the redefinition by various existing separatist groups of their tenets to include such opposition.

I shall consider each of these proposed additional limitations, designated "a" through "e," to determine whether the limitation may be considered by the courts to be a reasonable classification and consistent with the due process clause. I shall also suggest a limitation, designated "f," which was not among those proposed but which may be found to limit the exemption reasonably and realistically to the groups which Congress intends to accommodate by this exemption.

(a) An explicit limitation of the exemption to the old order Amish: This limitation would probably be considered arbitrary since the designation of one sect to the exclusion of other sects having the same scruple would be inconsistent with the congressional policy of removing the Government coercion of belief which constitutes the denial of the free exercise of religion. It would also probably constitute an invalid preference of one particular faith over those which were similarly situated. The facts presented to Congress indicate that there may be certain other sects of the Amish and possibly other religious groups who have the same religious scruple which is now being coerced. Furthermore, the exemption of a single named group will be held to be arbitrary[5] unless the relation to the public good is clearly demonstrable.[6]

(b) Limitation to members of a sect, excluding adherents who are not members; and (c) limitation to members of sects who "take care of their own": These limitations are being considered together since at least some of the bills before Congress provide that a necessary condition of exemption is a finding by the Secretary of Health, Education, and Welfare that the sect makes pro-

Cf. *United States* v. *Department of Revenue of Illinois*, 191 F. Supp. 723 (N.D. Ill. 1961) invalidating a retail tax on sales to the Federal but not to the State government.

vision for its elderly "members." This condition would probably be considered a necessary and proper public policy consideration and, therefore, a reasonable condition upon which to base eligibility for exemption. The purpose of Congress in this legislation would be to assure the fulfillment of the welfare purpose of social security while relaxing that feature of social security which impinges on the free exercise of religion. Moreover, since individuals can seldom guarantee their own future against deprivation and need, it would be reasonable for Congress to provide that to qualify for an exemption a person must be a member of a sect which shares the religious commitment, both with respect to refusing State insurance and providing for that sect's welfare. Consequently, since the sect aspect is essential, it would seem reasonable to limit the qualification for exemption to persons who are members of a qualifying sect. As said by Justices Black and Douglas in *Board of Education* v. *Barnette*, 319 U.S. 624, 643 (1943): "No well-ordered society can leave to the individuals an absolute right to make final decisions, unassailable by the State, as to everything they will or will not do."

(d) Limitation to sects which require members to follow the occupation of farming as a matter of religious principle: This limitation, as phrased, would not be appropriate on the basis of the facts given in the joint statement. It is there stated that "most old-order Amish communities permit members to make their living as self-employed carpenters or masons" (p. 9). The possibility of limiting the exemption to sects which are established in farming communities for religious reasons is suggested and discussed below.

(e) Limitation to religious groups which were established before 1935: Any limitation which designates a cutoff date would generally be less reasonable than one which on its face shows some relationship to the public purpose of the statute. For example, a requirement that the sect shall have demonstrated over a period of years its ability to take care of its own members would probably be more acceptable as a classification. The text of certain of the legislative proposals already contain this principle in that they refer to the sect to be exempted as one which is "established." I would see no reason why the extent or the text of establishment might not be specifically spelled out. There is some authority that a "classification which draws a line in favor of existing businesses as against those later entering the field will be upheld if any reasonable and substantial basis can be found to justify the classification." *Del Mar Canning Co.* v. *Payne*, 29 Cal. 2d 380, 175 P. 2d 231, 232 (1964. The circumstances justifying such a discrimination must provide substantial reasons. *Mayflower Farms* v. *Ten Eyck*, 297 U.S. 266 (1936). It is probable that the unusual situation of the Amish with respect to social security would be considered a substantial reason for a limitation of the classification to established sects.

(f) Limitation to sect established in farming communities for religious reasons: The faith, the members of which are to be exempted, might be described not only as one whose established tenets would be violated by the acceptance of insurance, and one which provides for elderly and dependent members, but as one which for religious reasons is established in farming communities. These limitations might be reasonable if Congress found after sufficient inquiry that they were necessary to assure that the exemption would be confined to sects which were religiously motivated and responsible, and to assure that the welfare purpose of social security would be fulfilled. Congress might reasonably find that the restriction of the exemption to those sects established in farming communities would be justified on the ground that such a sect could be more certainly relied upon to identify and provide for its dependent and elderly members than those in the mobile and transient urban environment. Conversely, the limitation would have the effect of excluding sects which subsequently organize for the purpose of exemption from social security, as it is unlikely that those would or could establish themselves in farming communities for religious or other reasons. The limitation would exclude other present separatist groups whose principles might, but do not specifically include refusal of social security benefits. Legislation which distinguishes farming situations from others because of sociological and economic differences and taken many forms and has been accepted by the courts. See, for example, *Tigner* v. *Texas*, 310 U.S. 141 (1940), rehearing denied, 310 U.S. 659 (1940)

G. D'ANDELOT BELIN,
General Counsel.

By Mr. JACKSON (by request):

S. 2080. A bill to make the Federal Columbia River Power System available for maximum electric efficiency for future essential power supply to promote conservation, and for other purposes; to the Committee on Energy and Natural Resources.

Mr. JACKSON. Mr. President, at the request of the Pacific Northwest Utilities Conference Committee and the Snohomish County Public Utility District, I am introducing two separate legislative proposals for a comprehensive Northwest regional electric power planning program.

During the past 8 months, utility organizations and various other parties have been working to develop a comprehensive regional power program to be forwarded to the Congress for consideration. The result of these efforts are the two proposals which I am introducing. These proposals diverge on important elements; however, they reflect the best thinking concerning power planning problems and needs in the Northwest of a large number of individuals and entities with long experience and great knowledge in the utility field. Together they represent a point of departure for the Congress to begin consideration of the many complex and important issues which the proposals address.

Considerable interest has already developed in the Northwest about the subject of regional power plan legislation. Many individuals, groups, and elected representatives at the State and local level have indicated their intention to participate in the process of congressional consideration of this proposal. Undoubtedly, the result of this participation will be a number of additional constructive suggestions for modifying or improving the plan as originally proposed.

I intend to take a judicious approach to consideration of this legislation and the problems it addresses. I believe that it is essential that the Energy Committee, which I chair, take a thorough look at the proposals, the problems they address, and alternative proposals and suggestions which are brought to our attention by interested parties in the region and to develop appropriate legislation to meet these needs.

We in the Northwest are proud of the highly efficient utility system which we have developed with the cooperation of Federal, State and local governments, public and private utilities and all of the citizens of the region. Working to solve our problems together has been the key to our success.

I believe that we need to approach the present issues and problems confronting the region in the same spirit of cooperation which has marked our past efforts in this area.

I believe it is important to assure the widest possible public understanding of the proposals which the PNUCC and the Snohomish County Public Utility District have made and the reasons which they identify concerning the need for their proposals.

Accordingly, the RECORD should include materials concerning these proposals which these organizations have provided to me. Therefore, I ask unanimous consent that the following documents be reprinted in the RECORD at the conclusion of my remarks: letters from the authorized representatives of the PNUCC and the Snohomish County PUD requesting that the proposals be introduced as legislation, a list of utility organizations participating in the PNUCC, explanatory materials from the PNUCC and Snohomish County describing their proposals, and the full text of their proposals as introduced.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 848

1. Amend Sec. 5. to read as follows:

"Authority to Purchase. In addition to authority under existing law, BPA may purchase power, provided that power purchased under new contracts for a term in excess of five years shall be purchased only as provided in Section 6. BPA may sell such purchased power together with or separately from power from the Federal Columbia River Power System. Power sold for a term in excess of two years shall be sold at rates no less than the rates applicable to other sales under this Act. Sales for a term longer than five years are to be made only to entities and under terms and conditions provided in this Act."

2. Amend Sec. 7(b) to read as follows:

"Rate Group A. Actual requirements up to the firm energy capability of the hydroelectric generating resources of the Federal Columbia River Power System, to public bodies and cooperatives that are obligated, as of the effective date of this Act, to make payments under net billing agreements. There will be allocated in each contract year to each such public body and cooperative executing a contract referred to in Sec. 7(g), an amount of power determined by multiplying the firm energy requirements for such year of such public body or cooperative by a fraction whose numerator is the total power available in that contract year under this subsection, and whose denominator is the estimated total firm energy requirements of all such public bodies and cooperatives. Such estimates will be made annually for the ensuing ten years. Firm energy requirements as used in this subsection has the same meaning as "Sum Energy Requirements" as the latter term is defined in contracts referred to in Sec. 7(g)."

3. Amend Sec. 9(a) to read as follows:

"BPA's obligation to deliver in any period

power sold under Sec. 8 shall be subject to limitation as provided in this section to the extent that BPA finds that it shall have an insufficiency of supply, provided that deliveries to any customer which has sold, or which has arranged for the sale of, power to BPA for such period from a designated plant shall not be reduced below the amount of power so sold.

4. Amend Sec. 10(a)(1), to read as follows:

"'Federal Base System Cost' (FBS cost) means cost (including repayment and interest) of the Federal Columbia River Power System hydrogenerating projects allocated to power (including irrigation costs assigned for repayment out of power revenues) less estimated revenues from the sale of non-firm power."

5. Amend Sec. 10(a)(3), to read as follows:

"'New resource cost' means cost of all power purchased or otherwise acquired by BPA less FBS cost, net billed thermal costs and system cost of power provided that, the cost of power purchased for a term of five years or less shall not be a new resource cost except to the extent such power is used to meet obligations of BPA incurred pursuant to Sections 7 and 8. Costs of power purchased from public bodies and cooperatives shall be separately determined from cost and power purchased from private utilities."

6. After Sec. 10(a)(3) insert new subsection (4) to read as follows:

"'Net billed thermal costs' means costs of power acquired by BPA under the net billing agreements."

Renumber the existing subsections (4) and (5) as "(5)" and "(6)" accordingly.

7. Amend Sec. 10(c) by redesignating references to Sec. 10(a)(4) and Sec. 10(a)(5) as "(a)(5)" and "(a)(6)" respectively.

8. Amend Sec. 10(d), to read as follows:

"Rate Group B shall recover the allocated cost of capacity, and the balance of FBS cost allocated to energy, system cost allocated to energy (including annual charges for the portion of systems costs treated by BPA as capital), net billed thermal costs allocated to energy and the proportion of new resource cost allocated to energy that the amount of power from such resources to be sold under Sec. 8 (b) through (e) in each year bears to the total amount of power to be sold from such resources in such year, plus the portions of transmission cost allocated under subsection (a)(5) and other cost under subsection (a)(6). Adjustment in Rate Group B shall be made as provided in subsection (j)."

9. Amend Sec. 10(e) by redesignating references to Sec. 10(a)(4) and Sec. 10(a)(5) as "(a)(5)" and "(a)(6)" respectively.

10. Delete subsection 10(n).

11. Delete subsection 18(e).

12. Amend section references throughout the bill accordingly.

S. 2080

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Pacific Northwest Electric Power Supply and Conservation Act".

SEC. 2. FINDINGS.—The Congress finds that—

(a) The Hydro-Thermal Power Program for providing future power supplies was developed in the late 1960's by the utility systems of the Pacific Northwest and the Bonneville Power Administration to meet future energy needs through bulk power supply facilities to be constructed and operated by the utility systems of the region in coordination with the hydroelectric generating resources of the Federal Columbia River Power System.

(b) Congress approved certain agreements implementing the Hydro-Thermal Power Program, but radical increases in costs of new thermal generation and unexpected delays in licensing and authorization of new thermal generation have imposed major unanticipated difficulties in achieving the objectives of such program.

(c) Regional development of hydroelectric resources, particularly additional capacity on the Federal Columbia River Power System, will be essential to an economic power supply with minimum environmental impacts.

(d) The Federal Columbia River Power System, operating in coordination with electric generation resources of utility systems of the region, provides a basic means for storing, regulating, and interchanging power supplies which, if fully utilized together with the further ability to provide for spreading planning burdens and costs of future power supply facilities, can support the effort of the region to cover costs of future bulk power supply.

(e) BPA purchase authority will facilitate regional pooling which will strengthen the financial ability of the utility systems to construct new resources. The regional pool so formed can also provide important financial support for effective conservation of energy through increases in efficiency of use.

(f) BPA has not notified its public body and cooperative customers that BPA does not have sufficient firm power to meet their anticipated load growth after July 1, 1983. BPA has notified its direct-service industrial customers that it will not be able to renew existing contracts after their expiration.

(g) It is in the public interest that essential future power supplies be available on a sound economic basis and that public bodies and cooperatives have available to them a future power supply from BPA.

(h) The inability of BPA to renew contracts with existing direct-service industrial customers threatens the Pacific Northwest with loss of employment vital to the region's economy and its workers, and threatens the production of 30 percent of the nation's primary aluminum, all of its ferronickel production, and substantial portions of its production of carbide, chlorine, ferro-alloys, and other materials vital to the national economy, the national energy-conservation effort, and the national defense. It is in the public interest that a power supply be continued to be made available to such customers as provided in this Act.

(i) It is in the public interest that existing regional cooperation and coordination among the utility systems and BPA be continued, and it is in the public interest that public and private utility systems jointly participate in the planning and designation of future power supplies through the Pacific Northwest Electric Planning and Conservation Organization.

(j) In order to carry out its functions and to implement the objectives of this Act it is necessary that PNEPCO prepare and publish forecasts of Pacific Northwest Power loads and resources; conduct programs to promote efficiency in power consumption in the Pacific Northwest; conduct studies and analyses of alternative sources of energy, including costs, timing, and availability; review long-range bulk power supply planning of utility systems; provide oversight services as specified in contracts with BPA; conduct or participate in plant siting studies and determinations; and take such other actions, consistent with this Act, as may be necessary or advisable in the performance of the foregoing functions.

(k) To provide for more efficient planning and utilization of generating resources, to minimize demands on capital and scarce fuel supplies and to promote conservation and efficient use of electrical energy, it is in the public interest that agreements, action or conduct be undertaken by persons or entities, acting alone or together, for the purpose of complying with or implementing the provisions or objectives of this Act.

(l) The Pacific Northwest has the unique opportunity to combine the ability of the coordinated hydroelectric resources of the region systems to store and manage power supplies, the ability to achieve, on a regional basis, reduced usage of fuels and investment capital and the ability to jointly support other power-related programs. This potential will be more fully utilized for the public benefit by a limited authorization to BPA to make long-term power purchases as provided in this Act.

SEC. 3. DEFINITIONS.—As used in this Act—

(a) "Average megawatts" (avg. mw) means average annual firm energy (expressed in thousands of kilowatts).

(b) "BPA" means the Bonneville Power Administration, and the Administrator of the Bonneville Power Administration.

(c) "Contract demand contract" means a contract for a sale of power in specified amounts for specified years.

(d) "Customer" means a public body, cooperative, private utility, Federal agency, or direct-service industrial, purchaser of power from BPA for use within the Pacific Northwest.

(e) "Date of continuous operation" means the date certain determined by the owner(s) of a designated plant as the point in time when the plant is ready to be operated and the output scheduled on a continuous basis.

(f) "Designated plant" means all or any part of a generating facility to the extent designated by PNEPCO for the purpose of this Act.

(g) "Load growth" means an increase of power requirements of a BPA customer due to increase in consumption within the Pacific Northwest.

(h) "Net billing agreements" means agreements existing as of the date of this Act between certain public bodies and cooperatives and BPA under which Participants' Shares and/or Owner's Shares of certain thermal generating plants have been assigned to BPA, compensation for such assignment being made by crediting the annual costs of each such share against the cost of power purchased by such Participant or Owner from BPA.

(i) "Pacific Northwest" means (1) the region consisting of the States of Oregon, Washington, and Idaho, the State of Montana west of the Continental Divide, and such portions of the States of Nevada, Utah, and Wyoming as are within the Columbia drainage basin and (2) any contiguous areas, not in excess of seventy-five airline miles from said region, which are a part of the service area of a distribution cooperative which has a distribution system from which it serves both within and without said region, and (3) the service area in California on the effective date of this Act of a utility system which serves a contiguous area both within and without said region.

(j) "PNEPCO" means Pacific Northwest Electric Planning and Conservation Organization, the nonprofit corporation described in section 17.

(k) "Power" means electric capacity or electric energy, or both, including the electric generating capability of a plant whether or not such plant is operable or the operation thereof is suspended, interrupted, interfered with, reduced or curtailed, in each case in whole or in part for any reason whatsoever.

(l) "Private utilities" means publicly held stock corporations organized under general business laws operating utility systems within the Pacific Northwest.

(m) "Public bodies and cooperatives" means public bodies and cooperatives as those terms are defined in Public Law 75-329, as amended, which sell power within or pur-

chase power for direct consumption within the Pacific Northwest.

(n) "Requirements contract" means a contract for sale of power to meet a customer's varying power requirements in excess of the purchasers' own resources, if any.

(o) "Utility system" means a system operated by a public body, cooperative, or private utility which sells power to ultimate consumers.

Sec. 4. Conservation.—(a) BPA, shall, in consultation with the States of Washington, Oregon, Montana, and Idaho (hereinafter called "the States"), PNEPCO, and other interested parties, develop programs and methods by which BPA customers and ultimate consumers may conserve and efficiently use power. In each budget submitted following the effective date of this Act, BPA shall include proposed expenditures for conservation programs; provided that expenditures under this section 4(a) shall take into account the amount of each utility system's purchases of power under this Act. Such programs may provide for grants or loans, including interest-free loans, to ultimate consumers served by utility systems. Funds for grants or loans may, and funds for loans to the ultimate consumers shall, be administered through utility systems. Total funds shall not at any given time exceed $300,000,000 total commitment for, and balance of, loans outstanding.

(b) BPA shall include in an annual report a description of regional conservation activity, conservation standards established and implemented, and estimated costs and savings therefrom. The report also shall compare, on a regional basis, the cost, amount, and timing of power available from conventional electric generation technologies with the cost, amount, and timing of power available from alternative technologies, and power savings which will result from potential conservation programs.

(c) BPA customers within a State specified in subsection (a) shall be subject to the surcharge provided for in this section if such State has failed to enact legislation or take other appropriate action consistent with the uniform regional standards for efficient use of power (hereinafter "standards") within two years after the initial establishment of standards or, if standards are amended requiring additional State action, two years after the date of amendment, the surcharge to continue until the State adopts legislation or takes other appropriate action.

(d) Standards under subsection (e) may be adopted by the states in consultation with BPA, acting through such officers or agents as may be determined by each state; or if the states do not act within two years of the effective date of this Act, BPA shall establish such Standards within one year thereafter. The states may adopt Standards or amended Standards established by BPA. Standards shall be periodically reviewed and amended as necessary.

(e) Standards shall be set as appropriate for the categories (including appropriate subcategories) including but not limited to the following:

(1) New residential, commercial, industrial and agricultural structures.

(2) Existing residential, commercial, industrial and agricultural structures.

(f) The States shall review new and existing industrial, commercial and agricultural processes to determine whether state-adopted standards would be appropriate for any such process. If the states determine such state standards should be adopted, they shall proceed as appropriate. Unless and until the states adopt such standards, any applicable mandatory federal energy conservation standard shall become a Standard for the purposes of this section.

(g) For the purpose of achieving optimum conservation levels, Standards established under this section shall, in order to meet the requirements of this section, be at least equal to any mandatory federal energy conservation standards, shall be practicable and reasonable, and shall be based on all the following:

(1) Demonstrable cost-effectiveness of power savings to the region upon implementation. Except for cause shown, the level of conservation to be derived from Standards shall be that which yields the highest net benefit (savings less cost). The power savings shall be valued at the delivered cost of new sources of power.

(2) Geographic, climatic, and other differences within the region.

(3) Social and environmental impacts.

(h) In the absence of certification by the states that a state has enacted legislation or taken other appropriate action consistent with the Standards, power sold for use in such state pursuant to Sections 7 and 8 will be sold subject to a surcharge. BPA shall waive the surcharge with respect to any political subdivision which the states determine has substantially complied with the Standards. If the states have failed to establish Standards and BPA has acted in their absence, BPA shall determine substantial compliance. The surcharge to any one customer shall be the greater of (1) an amount equal to 50 percent of the total cost of power purchased by such customer under this Act and subject to surcharge, or (2) an amount calculated by applying to such power purchased a rate determined by taking the difference between the basic rate based on Rate Group A and the basic rate based on Rate Group C and dividing by two. Revenues from the surcharge shall be used to defray the costs of conservation programs under subsection (a). Revenues in excess of these requirements shall be distributed annually, through billing credits, to each customer not subject to such surcharge and shall be allocated in the proportion that the cost of power sold to such customer bears to the total cost of power sold to all such customers.

(i) The States may allow exceptions for good cause from Standards and thereupon BPA may waive the surcharge provided for in this section.

(j) Provisions implementing the surcharge and other features of this section, as appropriate, shall be included in BPA's power sales contracts.

(k) No action by the States to (1) establish, adopt, or amend Standards, (2) certify that a State or political subdivision thereof has acted consistently with Standards, or (3) allow exceptions shall be effective except upon unanimous agreement of the States of Oregon, Washington, Idaho and Montana.

Sec. 5. Authority to Purchase.—In addition to authority under existing law, BPA may purchase power, provided that power purchased for a term in excess of five years shall be purchased only as provided in Section 6. BPA may sell such purchased power together with or separately from power from the Federal Columbia River Power System. Power sold for a term in excess of two years shall be sold at rates no less than the rates applicable to other sales under this Act. Sales for a term longer than five years are to be made only to entities and under terms and conditions provided in this Act.

Sec. 6. Purchases for Term Longer Than Five Years.—(a) BPA may purchase power (1) from a designated plant from the Owner of such plant or any other person having an interest in such power or (2) from a system designated by PNEPCO.

(b) In addition to purchases under subsection (a), BPA shall, and is directed to, purchase at system cost (as defined in Section 10) power offered for sale by private utilities but not to exceed 4000 avg. mw.

Sec. 7. Basic Entitlements to Power.—Section 10 assigns costs of power to three groups—A, B and C—as the basis for schedules of rates and charges for sale of power. Each class of sale in this section and Section 8 is classified to its Rate Group at the beginning of each paragraph.

(a) BPA shall, and is directed to, sell power as provided in this section.

(b) Rate Group A. Actual power requirements (not more than 5700 avg. mw, such limit increasing beginning July 1, 1984 in 10 equal annual increments to a total of 6090 avg. mw), to public bodies and cooperatives that are obligated, as of the effective date of this Act, to make payments under net billing agreements. There will be allocated in each contract year to each such public body and cooperative executing a contract referred to in Section 7(g), an amount of power determined by multiplying the firm energy requirements for such year of such public body or cooperative by a fraction whose numerator is the total power available in that contract year under this subsection, and whose denominator is the estimated total firm energy requirements of all such public bodies and cooperatives. Such estimates will be made annually for the ensuing 10 years. Firm energy requirements as used in this subsection has the same meaning as "Sum Energy Requirements" as the latter term is defined in contracts referred to in Section 7(g).

(c) Rate Group B. (Adjusted) 2800 avg. mw in the year ending June 30, 1979, increasing in equal annual increments to 4000 avg. mw in the year ending June 30, 1985, or such lesser amount of power equal to that offered for sale for such years to BPA under Section 6(b), to private utilities.

(d) Rate Group B. Actual requirements as of June 30, 1983, but not more than 260 avg. mw, to Federal agencies.

(e) Rate Group B. Not more than 3000 avg. mw to direct-service industrial customers with power sales contracts with BPA as of the effective date of this Act.

(f) Rate Group C. Not more than 1000 avg. mw as determined by BPA to be available from new resources, to direct-service industrial customers identified in subsection (e) to be used for production purposes specified in existing power sales contracts. If BPA makes non-firm power available to such customers in lieu of all or a portion of sales under this subsection, the total in any year of sales under this subsection and of such sales of non-firm power so made available shall not exceed 1000 avg. mw.

(g) Contracts for sale of power under this section and for purchase of power Section 6(b) shall be in substantially the form of the several draft contracts appropriate for each transaction included in the committee report on this Act. Promptly after the effective date of this Act, BPA shall execute and tender contracts for execution to all entities entitled to purchase power under this section or to sell power under Section 6 (b). No such contract may be executed by a purchaser or seller on a date more than six months after the date of tender.

(h) Sales under this section shall include during the term of the contract the amount of capacity as provided in such contract.

Sec. 8. Additional Power Sales.—(a) BPA, subject to the availability of power, is authorized to sell power as provided in this section in addition to the power which BPA is directed to sell under Section 7.

(b) Rate Group B. (Adjusted) Not more than one-half of actual load growth, to each utility system. Load growth of public bodies and cooperatives shall be the load growth commencing in the first year during which the total load of each public body or cooperative, respectively, equals or exceeds the power made available under Section 7(b) and non-federal hydro resources utilized to

meet such loads in 1975–76. Load growth of public bodies and cooperatives may be determined collectively. Load growth of private utilities shall be the load growth occurring after June 30, 1983.

(c) Rate Group B. (Adjusted) Not more than one-half of total load as of the date of initial service by BPA under a contract entered into under this Act, other than under Section 7, and not more than one-half of load growth thereafter, to public bodies and cooperatives which do not receive service under a contract authorized in Section 7; provided, that prior to June 30, 1983, total load of such a customer shall be at Rate Group B.

(d) Rate Group B. Increased requirements of customers described in Section 7(e) due to technological reasons, at the annual rate of 0.5 percent, cumulative to the extent not used, of the total contract demand for all such customers as a group during the preceding contract year beginning July 1, 1978.

(e) Rate Group B. One-half of load growth after June 30, 1983, to Federal agencies.

(f) Rate Group C. (Adjusted) All other sales of firm power, to utility systems and other customers.

(g) Utility systems purchasing power at the same Rate Group may interchange entitlements under such Rate Group so long as the total purchased power that BPA is obligated to sell under any Rate Group is not increased.

SEC. 9. INSUFFICIENCY OF SUPPLY.—(a) BPA's obligation to deliver in any period power sold under Section 8 shall be subject to limitation as provided in this section to the extent that BPA finds that it shall have an insufficiency of supply, provided that deliveries to any customer which has sold, or which has arranged for the sale of, power to BPA for such period shall not be reduced below the amount of power so sold.

(b) BPA shall give notice ten years in advance of such limitation, or such shorter period not less than seven years if BPA determines adequate alternate generating facilities can be secured in such period. No such notice may be given prior to July 1, 1982.

(c) "The amount of power so sold" shall be based upon the designated plant's estimated actual capability in the eleventh year following such notice of insufficiency. Each year thereafter such "amount of power so sold" shall be revised as necessary to take into account any changes in the estimated actual capability. Such revision shall be effecitve ten years from the date of the revision.

SEC. 10. RESOURCE COST BASES OF RATE SCHEDULES.—(a) BPA resources shall be classified, for cost purposes, in the following resource cost groups:

(1) "Federal Base System Cost" (FBS cost) means cost (including repayment and interest) of the Federal Columbia River Power System hydrogenerating projects allocated to power (including irrigation costs assigned for repayment out of power revenues) in operation on or before June 30, 1983 (including facilities initially scheduled for service by June 30, 1983, but delayed beyond that date), and costs of power acquired from projects under net billing agreements, all as adjusted for replacement resources. BPA shall acquire resources to replace the capability of resources included in FBS cost to the extent of any reduction of such capability.

(2) "System cost" means the full cost to a private utility of acquiring, owning and operating the power facilities used or to be used to supply power purchased under section 6(b) and shall be the sum of the following: (A) fixed costs, (B) operating expenses, including fuel, depreciation, taxes other than Federal income taxes, Federal and State income taxes, purchased and interchanged power costs, and wheeling costs, and (C) any other expenses related to the purchase of power, the construction, ownership, operation and maintenance of generating plants to the extent not included in (A) and (B) above.

(3) "New resource cost" means cost of all power purchased or otherwise acquired by BPA less costs included in FBS cost and system cost of power, provided that, the cost of power purchased for a term of five years or less shall not be a new resource cost except to the extent such power is used to meet obligations of BPA incurred pursuant to sections 7 and 8. Cost of power purchased from public bodies and cooperatives shall be separately determined from cost of power purchased from private utilities.

(4) Cost of transmission to be paid by BPA customers shall be determined in accordance with Public Law 93–454 and allocated by BPA among Rate Groups A, B and C.

(5) All other cost, including administrative and general, shall be appropriately allocated by BPA.

(b) Resource costs shall be allocated by BPA between capacity and energy. Whenever a single capacity rate is in effect, capacity costs shall be totaled and allocated to Rate Groups in proportion to capacity sales of each Rate Group.

(c) Rate Group A shall recover the allocated cost of capacity, and that portion of the FBS cost allocated to energy, that is related to power sold in each year under section 7(b) and section 11(b), plus the portions of transmission cost allocated under subsection (a)(4), and other cost allocated under subsection (a)(5).

(d) Rate Group B shall recover the allocated cost of capacity, and the balance of FBS cost allocated to energy, system cost allocated to energy (including annual charges for the portion of system cost treated by BPA as capital), and the proportion of new resource cost allocated to energy that the amount of power from such resources to be sold under Section 8(b) through (e) in each year bears to the total amount of power to be sold from such resources in such year, less estimated revenues for sales of non-firm power as provided in subsection (n), plus the portions of transmission cost allocated under subsection (a)(4) and other cost under subsection (a)(5). Adjustment in Rate Group B shall be made as provided in subsection (j).

(e) Rate Group C shall recover the allocated cost of capacity, and the proportion of new resource cost allocated to energy that the amount of power from such resources to be sold under Sections 7(f) and 8(f) in each year bears to the total amount of power to be sold from such resources in such year, plus the portions of transmission cost allocated under subsection (a)(4) and other cost under subsection (a)(5). Adjustment in Rate Group C shall be made as provided in subsection (j).

(f) In establishing rate schedules, BPA shall establish a single rate for sale of capacity common to Rate Groups A, B and C. If, thereafter, BPA determines that costs associated with supplying capacity make such single rate inequitable, as compared with separate capacity rates for each rate group, it shall establish separate capacity rates for each Rate Group. Cost of capacity reserves and surplus capacity shall be included in the capacity rate, appropriately allocated in case of multiple rates.

(g) Revenues from sales of firm power under existing contracts which continue in effect, and net revenues from wheeling on the Pacific Northwest-Pacific Southwest Intertie shall be credited against FBS cost.

(h) BPA shall allocate among Rate Groups A, B and C in proportion to the avg. mw purchased under each group (i) the fixed cost of any plant that is abandoned or terminated other than for obsolescence, (ii) the fixed cost of a plant which is inoperable, or a portion of fixed cost of any plant to the extent its operation is substantially limited, and (iii) to the extent determined by PNEPCO, that portion of fixed cost related to a reasonably unforeseen replacement or addition of a major plant component.

(i) Any cost and any revenue, the allocation of which is not specifically provided for in this Act, may be allocated by BPA among Rate Groups A, B or C as appropriate.

(j) For the purpose of this subsection, Public Bodies and Cooperatives are one customer class, and private utilities are another customer class. Rate schedules established for sales under Rate Groups B and C to such classes shall provide for annual adjustment in the component of such rate schedule that is based on new resource cost. If the estimated average cost of power of all new resources purchased from a customer class is more than 1 percent in a year less than the estimated average cost of power of all new resources, in all cases excluding plants designated under section 17(c), the estimated average cost of power of new resources purchased from such class shall be used instead of the estimated average cost of power of all new resourecs in determining the rate applicable to such class in such year, and the rates to the other class shall be increased to not more than the estimated average cost of power sold by such class to recover any resulting loss in revenue, with any remaining deficit from estimated average cost of power from all new resources allocated among all customers purchasing power under rate schedules pursuant to Rate Group B or C.

(k) BPA may change rates for the sale of electric power and for the transmission of non-Federal electric power over the Federal transmission system not more frequently than annually upon not less than 12 months' notice, or such lesser time agreed to by the affected customers, except that such notice shall not be required for interim rates under Section 18(a) which are to be effective not later than October 1, 1978.

(l) Schedules of rates and charges shall be established by BPA in conformity with this Act and Public Law 93–454 having regard, in addition to the provisions of section 9 of Public Law 93–454, to the recovery of the costs of purchased power under sections 5 and 6, the costs of conversion programs under section 4, and other costs authorized to be incurred by this Act.

(m) All costs shall be recovered and cost of service computed, without any annual requirement, within the repayment period or periods provided by law. The existing method of determining repayment obligation of costs of the Federal Columbia River Power System allocated to power (including irrigation costs assigned for repayment out of power revenues) and of determining applicable interest cost shall not be changed because of this Act.

(n) Estimated revenues from sales of non-firm power shall be credited to FBS costs through June 30, 1980. Thereafter, allocation of such estimated revenues shall be made in equal annual increments so that in the year ending June 30, 1985, and thereafter all such estimated revenues are allocated as provided in subsection (d).

SEC. 11. CONTRACT TERM.—(a) Sales under Section 7 shall be for a term of 35 years from the effective date of the contract or such lesser period that the purchaser may desire. Sales under Section 8 may be for a term ending not later than 35 years after the first delivery under the contract or, where a sale is related to a designated plant, or the useful life of the plant, whichever is longer. Subject to the provisions of Section 9, contracts providing for sales under Sections 7

and 8 shall not be subject to cancellation in whole or in part to satisfy the requirements of any other customers.

(b) BPA power sales contracts existing on the date of this Act with customers which do not elect to execute contracts tendered under Section 7(g) shall not be extended or renewed. The basis of the rate applicable to such existing contracts with public bodies and cooperatives shall be Rate Group A, and the amount of power shall be deducted from the limits in Section 7(b), during the remaining term of the contract, and the basis of the rate applicable to such existing contracts with Federal agencies and direct-service industrial customers shall be Rate Group B.

(c) Agreements executed by BPA as an implementation of the Treaty between Canada and the United States of America Relating to the Cooperative Development of the Water Resources of the Columbia River Basin, and the Pacific Northwest Coordination Agreement shall continue in force in accordance with their terms.

SEC. 12. ASSIGNMENTS.—(a) A contract for the sale of power under Section 7 or 8 shall not be assigned without the consent of BPA if BPA determines such assignment will (1) require additional BPA facilities to enable BPA to deliver power pursuant to such contract, or (2) make unusable existing BPA facilities, or (3) increase the total amount of power BPA is obligated to deliver.

(b) A contract for sale of power under Section 7(b), (e), or (f) shall not be assigned to any other entity, except (1) in the case of a sale under Section 7(b), to another purchaser under such section, or to a successor-in-interest to the utility system or to the facilities being served, or (2) in case of a sale under Section 7(e) or (f), to a successor-in-interest to the business, or (3) as a pledge of a security interest.

SEC. 13. LARGE LOAD LIMITATION.—BPA shall not increase the contract demand established pursuant to a contract demand contract and shall not supply power to a requirements contract customer for that part of load growth which is created by a new single load of such customer in excess of 35 avg. mw in any 12 months, or 100 avg. mw in any 60 month period, if BPA had not previously determined that firm power would be available for such load, provided that power may be made available on the condition that it be interruptible for a period measured by the time required to acquire the necessary resources but not exceeding ten years, or until the scheduled date of continuous operation of resources to be available to supply such load, whichever is earlier. If interruption is required for several such loads, each load will be curtailed in its entirety in inverse order in which the commitment to customers was made. Interruption of all such loads shall be made prior to restriction of power sold under Sections 7 (e) and (f) and Sections 8 (d) and (f).

SEC. 14. CONTINUATION OF SERVICES.—BPA shall continue to make available to its customers those services necessary to enable BPA to carry out its statutory responsibilities. Such services shall include, but not be limited to, load forecasting, load factoring, storage, dispatching, scheduling, transmission, coordination, emergency and breakdown relief, and conservation programs. BPA shall make such services available in a fair and equitable manner among all its customers.

SEC. 15. BPA FUNDING.—(a) In addition to the purposes for which BPA is authorized to expend funds from the Bonneville Power Administration Fund as enumerated in Section 11(b) of P.L. 93-454, BPA is authorized to expend from such Fund such amounts as may be required to pay: (1) the costs associated with purchases under Sections 5 and 6 of this Act, including advance payments for power on account of costs of acquisition of fuels for plants the output of which is purchased in whole or in part by BPA under Sections 5 and 6 and (2) costs associated with the conservation programs referred to in Section 4 of this Act.

(b) In addition to the purposes for which BPA is authorized to issue and sell bonds under Section 13(a) of P.L. 93-454, BPA is authorized to issue and sell bonds, subject to the conditions in P.L. 93-454, (1) to provide loan funds under Section 4(a) of this Act, provided that bonds outstanding for such purpose shall not at any time exceed the sum set forth in Section 4(a), and (2) to pay that portion of costs of acquisition of power which may be treated as capital cost under generally accepted utility accounting practice, exclusive of such costs for fuel.

SEC. 16. CONSTRUCTION.—(a) This Act shall be liberally construed to preserve and encourage regional initiative, flexibility, and cooperation in dealing with the subject matter of this Act, and to realize and effectuate the purposes and objects of the Act as found and declared by Congress.

(b) No agreement, action, or course of conduct by any person or entity which is undertaken for the purpose of complying with or implementing the provisions or objectives of this Act shall be deemed to be a violation of the Act of July 2, 1890, as amended (the Sherman Antitrust Act), the Act of October 15, 1914, as amended (the Clayton Act), the Act of September 26, 1914, as amended (the Federal Trade Commission Act), the Act of May 26, 1938, as amended (the Robinson-Patman Antidiscrimination Act), or any other similar Federal or State laws.

(c) PNEPCO shall promptly transmit to BPA and the Attorney General a written notice, by registered mail, return receipt requested, of any designation or refusal to designate under section 17 (b) or (c). No action or proceeding brought under the laws referred to in subsection (b) arising out of such PNEPCO action shall be commenced after the expiration of six months from the latest date either such agency received such written record of PNEPCO action.

SEC. 17. REGIONAL ORGANIZATION.—A valid designation can be made by PNEPCO only so long as it has the characteristics, and its articles of incorporation require or authorize functions, as set forth in this section.

(a) PNEPCO is organized and existing as a nonprofit corporation under the laws of the State of Washington and its articles of incorporation provide that each utility system in the Pacific Northwest has the right at all times to name a natural person to be a member of PNEPCO.

(b) PNEPCO shall designate a plant or system for purchase of all or part of the power therefrom by BPA on such conditions and for such terms as are consistent with this Act and if such purchase meets the following standards:

(1) such purchase shall be consistent with provision of an adequate power supply for the Pacific Northwest in light of forecasted power loads and resources, taking into account programs developed under section 4 for the efficient use and conservation of electric energy;

(2) each utility system has been or will be given reasonable opportunity for participation in the proposed facility or other resources purchased by BPA sufficient to meet its forecasted resource deficiencies; and

(3) such purchase would be consistent with providing economic and reliable service to the customers of the utility systems and BPA.

(c) PNEPCO may designate a plant for purchase of all or part of the power therefrom which plant does not meet the criteria of subsection (b)(3) but is an experimental, developmental, or pilot plant intended to develop new technologies of generating economic and reliable electric service.

(d) All meetings for the purpose of designating plants or adopting regional forecasts of loads and resources shall be open to the public.

(e) BPA and the Governors of Oregon, Washington, Idaho, and Montana may designate representatives to participate as members in all PNEPCO committees and task forces and to attend, observe, and engage in discussions at all meetings of the Board of Directors of PNEPCO or its members. Invitations may be extended to other civil authorities of the Pacific Northwest to participate as appropriate in PNEPCO committees and task forces.

SECTION 18. MISCELLANEOUS.—(a) BPA may, without approval of the Federal Power Commission, apply its existing rates to, and thereafter establish interim rates under Rate Groups A and B for, contracts under Section 7(g) during the period from the effective date of the Act to the date when rate schedules prepared pursuant to this Act are first filed with and approved by the Federal Power Commission pursuant to P.L. 93-454, which date of filing shall be no later than 18 months after the effective date of this Act, provided that no such interim rates may be established after such filing.

(b) A copy of each purchase contract under Section 6(a) substantially in the form proposed for signature, shall be transmitted by BPA to Congress, and thereafter BPA shall publish notice thereof in the Federal Register not less than 60 days prior to the proposed date of execution of such contract. Any such contract executed more than 60 days after the date of such publication shall be valid for all purposes under this Act and the statutes and laws of the United States, and its validity shall not be questioned in any court of the United States unless, prior to the execution thereof, suit has been filed in a court of the United States challenging the validity of such contract.

(c) The Secretary of PNEPCO shall certify to BPA the designation of a plant or system under Section 17 together with any conditions of such designation. Thirty days after the date of such certification, such certification shall be conclusive for all purposes that a valid designation of a plant or system under Section 17 has been made in accordance with the requirements of this Act and with the Articles and Bylaws of PNEPCO, and after such certification such designation may not be withdrawn, modified, or revoked without consent of the owner or owners of the plant or system.

(d) No provision of Chapter 2C, Title 15, U.S.C., shall apply to or be deemed to include: (1) PNEPCO; or (2) any "person" or "company" (as defined in 16 U.S.C., section 79b(a) (1) and (2)) organized and operated primarily for the purpose of financing, leasing, constructing, owning, managing, or operating part of, an interest in, or all of, facilities used for the generation of electricity (together with associated transmission and other facilities), 50 percent or more of the power from which, or from the part or interest so financed, leased, constructed, owned, managed, or operated, is or will be sold to BPA under section 5 or 6.

(e) If after July 1, 1982, and prior to June 30, 1988, BPA gives a notice of insufficiency to all its requirements customers and, prior to June 30, 1988, BPA either has refused to purchase power from designated plants or is legally disabled from purchasing power adequate to cover such insufficiency, then during the period of insufficiency estimated revenues from sales of nonfirm power shall, in lieu of the provisions of section 10(d), be credited one-half to Rate Group A and one-half to Rate Group B if the in-

sufficiency is caused by a BPA refusal to purchase, and shall be credited entirely to Rate Group A if the insufficiency is caused by such legal disability.

SEC. 19. SEVERABILITY AND CONTINUATION OF RIGHTS.—If any part of this Act is declared unlawful, then all remaining parts shall remain in full force and effect, provided that, if any part of either section 5 or section 6 is declared unlawful, any obligations entered into pursuant to section 5 or 6 shall remain in full force and effect in accordance with their terms, and provided further that, if the provisions of section 7(b) are declared unlawful, then section 10(c) and that portion of section 10(d) relating to FBS cost shall be void.

SEC. 20. TAX-EXEMPT BONDS IN THE CASE OF CERTAIN REGIONAL ELECTRIC ENERGY PROGRAMS.—(a) Subsection (b) of section 103 of the Internal Revenue Code of 1954 (relating to industrial development bonds) is amended by inserting after paragraph (3)(B) the following new paragraph:

"(C) An agency of the United States administering a program approved by an Act of Congress for purposes of meeting the electric energy needs of one or more regions of the United States (but only with respect to the agency's acquisition of electric energy from a facility therefor if the agency determines, prior to contracting for the acquisition, that such electric energy is not being acquired for the purposes of furnishing a major portion thereof to persons who are not exempt persons (within the meaning of paragraphs A and B), each of which is expected to be furnished more than 3 percent of the electric energy; provided that in computing the portion of the proceeds of an issue of obligations to be used in any trade or business by persons who are not exempt persons, the amount of electric energy the agency determines will be furnished by it to such persons shall be treated as sold to such persons by the issuer of the obligations)."

(b) The amendments made by this section shall apply to acquisitions of electric energy after the effective date of this Act.

PACIFIC NORTHWEST UTILITIES CONFERENCE COMMITTEE,
September 8, 1977.

Hon. HENRY M. JACKSON,
Chairman, Committee on Energy and Natural Resources, U.S. Senate, Dirksen Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: We enclose a copy of draft legislation called the Pacific Northwest Electric Power Supply and Conservation Act, together with a description of the major features of the draft and the needs to which they are addressed. We respectfully request the introduction of the legislation and its consideration as expeditiously as the business of the Congress permits.

This legislation was prepared under the auspices of the Policy Committee of the Pacific Northwest Utilities Conference Committee (PNUCC), an informal organization which includes representation from Pacific Northwest public bodies, cooperatives and private utilities and from industrial customers purchasing power directly from Bonneville Power Administration (BPA). A list of represented organizations is enclosed.

Several committees composed of technical and managerial personnel, made available from all segments of the industry to PNUCC for the drafting effort, worked intensively for about seven months preparing this legislative proposal and analyzing many alternative approaches to its various elements. The work sessions and general meetings were covered and extensively reported throughout the region by the news media during the period of the PNUCC efforts. Representatives of the State Governments of Oregon, Washington, Idaho and Montana, and of the City of Portland, Oregon, participated in and made important contributions to the discussions. Also, representatives of at least seven environmental organizations (including the Sierra Club and the Environmental Councils of Washington and Oregon) participated extensively in the discussions and received all work products as they were produced. Finally, BPA supplied very valuable technical assistance and advice as requested by PNUCC and others.

Those and other non-utility representatives provided substantial input to the process and made many suggestions, some of which are incorporated in the draft. But the proposal remains that of PNUCC.

The 112 public agencies and cooperatives have worked on this matter through the Public Power Council—their planning group—which is governed by an elected Executive Committee of 18 members equally divided between municipalities, public utility districts, and electric cooperatives. By a vote of 16 to 1, with one abstaining, the Public Power Council has determined that the enclosed draft is ready for introduction and consideration by the Congress. The Snohomish County PUD representative cast the sole vote against releasing the draft in this form, and the Seattle City Light representative abstained on instructions from the Seattle City Council pending further study and formulation of policy positions by the City Council. Both the Seattle City Council and Snohomish County PUD confirm that a regional program is necessary, however.

The listed investor-owned utilities and Bonneville direct service industrial customers have all approved introduction of the bill and commencement of the legislative process.

Neither PNUCC nor the Public Power Council has been advised of opposition from any other utility in the Pacific Northwest. The proposal is under study by many others, including local governments in addition to the elected Boards of public systems, and we assume their views will be expressed in the normal course of the legislative process.

If further information is desired, we will supply it promptly. In the meantime, we appreciate your assistance.

Sincerely yours,

GORDON C. CULP, *Counsel.*

PNUCC LEGISLATIVE PROPOSAL FACT SHEET

A. TRADITIONAL BULK POWER SUPPLIES AND SALES POLICIES

For forty years, the Bonneville Power Administration (BPA) has been the major supplier of bulk power in the Pacific Northwest. BPA does not own any generating facilities, has no authority to construct such facilities, and only limited authority to purchase the output of generating facilities constructed by others. Its principal role is to market the power produced at hydroelectric dams constructed by other federal agencies, and to operate a regional transmission system capable of accommodating both federal and non-federal power deliveries.

The chief purchasers of bulk power in the Northwest fall into three categories: consumer-owned utilities (including municipal systems, public utility districts, and cooperatives), investor-owned utilities, and certain industries that purchase power directly from BPA. The consumer-owned utilities ("publics") have a statutory preference to purchase federal power sold by BPA; neither the investor-owned utilities ("privates") nor the direct-service industries have such rights.

The distribution of public and private utilities is not uniform throughout the Pacific Northwest. Washington State consumers are served mostly by publics, while Oregon consumers are served mostly by privates. Historically, disparities in bulk power costs as between publics and privates were substantially less than those that exist today, partly because BPA had sufficient federal power to permit some sales to privates as well as publics, and partly because the cost of constructing non-federal generating resources was relatively low, compared with the cost of constructing new generating resources today.

The direct-service industries play an important—and frequently misunderstood—role in the BPA bulk power marketing program. Their relatively large and constant power demand made construction of large federal facilities more economically feasible at an early date. The industries purchased large amounts of federal power not suitable for utility use that otherwise would have been wasted in years of abnormally high streamflows. These purchases contributed revenues to the federal system that reduced costs for other bulk power purchasers.

Most important, perhaps, the industrial contracts have also provided substantial reserves for the entire region, since certain power sales to those industries can be interrupted when necessary to meet the requirements of utilities that purchase federal power and for system emergencies. Without their presence the full cost of maintaining adequate reserves would be borne by the utilities and their consumers.

B. WHY NEW FEDERAL LEGISLATION IS NEEDED

Two basic facts underlie all the major power problems in the Pacific Northwest today: the firm energy generating potential of the Columbia River and its tributaries has been largely developed and the cost of building new generating facilities to meet the region's needs is astronomical. The day of cheap and abundant power is over. Today there is an urgent need for conservation programs, for efficient management of the region's generating resources, and for planning mechanisms that insure the availability of the power we do need at the lowest attainable costs.

The following problems are very serious, and will rapidly become acute if the present regional power supply framework remains unchanged:

1. *Uncertain Supply of Federal Power.* For the first time in history, BPA has been forced to notify its preference customers (the publics) that it will be unable to supply their requirements for more power after 1983. This is serious news for the publics, most of whom have depended principally on BPA for power supply.

Since BPA cannot increase the amount of power available to the publics, it must soon reallocate the limited amount available. To the extent new publics may be created (see below), the BPA "pie" would be cut into smaller and smaller pieces. The reallocation process would take years to complete, and competing claims would likely have to be resolved in the courts. Utility managers would not know how much power they might have when the process ends, so they would be unable to plan on a firm basis for additional sources of supply they will need.

2. *Termination of Supply to Direct-Service Industries.* BPA has informed its direct-service industrial customers that it cannot renew their power contracts when those contracts expire, beginning in 1981, since BPA does not have sufficient power to meet the needs of its preference customers. These industries—which produce 30% of the nation's aluminum, 100% of its nickel, and other products—need a source of power at a price they can afford. They must know very soon whether that power will be available to them in order to plan future investments in the Northwest, or the possible relocation of their plants elsewhere.

3. *Large Cost Disparities Within the Region.* Until 1973, a substantial part of private utility requirements was supplied by BPA. But since then, they have been unable to purchase any firm power from BPA. Their necessary investment in new and higher-cost generating facilities translates into higher costs for bulk power, especially in comparison with public systems that still obtain bulk power from BPA. Bulk costs for the privates are several times those for public agencies. This growing disparity affects the entire region, but its impact is spread very unevenly, particularly as between Washington and Oregon. Disparities in bulk power costs convert into disparities in consumer rates. As a result, in any Pacific Northwest state, a given community may have electric rates that are more than twice as high as rates in a neighboring community. This disparity will increase and the resulting political stresses will probably become unbearable in the absence of new legislation.

4. *Creation of New Preference Customers.* As a result of the higher rates of private utilities and the fact that private utilities predominate in the State of Oregon, Oregon's Governor has proposed, and its legislature has passed, a bill creating a new public agency to purchase power directly from BPA and sell it to those domestic and rural consumers in Oregon who now receive their electricity from private utilities. (Nearly 80% of Oregon's domestic and rural customers are served by privates.) This new agency, the Domestic Rural and Power Authority ("DRPA"), would complicate the legal fight over reallocation, but it would not solve other serious problems. The legal battles over reallocation itself would raise issues of national significance likely to be carried to the U.S. Supreme Court. If DRPA is activated—which will not occur if the regional bill is adopted—Washington, Idaho and Montana could decide to create DRPAs of their own to protect their citizen's rights to a proportionate share of BPA's power.

The City of Portland has applied to BPA for a power supply as a preference customer of BPA, and has threatened to bring suit against BPA for signing contracts with certain preference customers, many of them in Washington.

These actions would each complicate and prolong the uncertainties of the reallocation process, without creating any additional power supplies and without producing lower costs for the region as a whole.

5. *Limitations on BPA's Ability to Play a Constructive Role.* Despite the severity of the problems outlined above, BPA—the region's major bulk power supplier, and the sole supplier to a majority of the region's public utilities—is statutorily precluded from resolving differences within the region or even from playing an effective role in finding the needed solutions.

Meanwhile, the historic cooperation within the region threatens to break down entirely, just when the need for cooperation is greatest. Not only is coherent planning becoming impossible, but the very ability of the system to finance essential generation may become seriously impaired. The opportunity still exists to develop reasonable and regional solutions by building constructively on existing planning and facilities, but that opportunity is rapidly diminishing.

C. HOW THE PNUCC LEGISLATIVE PROPOSAL WAS DEVELOPED

Many different groups recognized these problems and, several years ago, started examining potential solutions. The private utilities looked at pooling. Various bodies examined new BPA authority, and the direct service industries formulated a legislative proposal. The Governor of Oregon began work on his DRPA legislation. The City of Portland explored the prospects of becoming a preference agency.

These various activities were not coordinated, however, and their many technical and economic impacts presented formidable problems. Last fall, in response to requests from public officials and a variety of BPA customers, BPA prepared a study paper analyzing power costs resulting from many concepts that had been discussed earlier, but the study paper did not describe any alternative that produced agreement. In late 1976, the effort came under the auspices of PNUCC and has resulted in the draft legislation called Pacific Northwest Electric Power Supply and Conservation Act.

The fact that individuals representing a large number of divergent and competing interests were able to cooperate in creating a single legislative proposal indicates how serious the Pacific Northwest's power problems have become. The same fact necessarily means that the consensus embodied in the PNUCC proposal does not—and cannot—fully satisfy any particular group, including the groups that came together to draft it. It should be emphasized, however, that the proposal was conceived and written within the PNUCC, and that PNUCC members believe it to be the best attainable solution that is in the interests of the region as a whole. Whether governing councils and boards of individual utilities can support it will have to await their decision.

D. WHAT THE PNUCC LEGISLATIVE PROPOSAL CONTAINS

The legislation would:

Establish the nation's first region-wide conservation program;

Create a much earlier and much enlarged role in the electric energy planning process for state and local governments and public groups;

Grant BPA limited authority to purchase power;

Establish rate groups for BPA's sale of power to different classes of bulk power purchasers;

Recognize the role of a regional utility planning body controlled equally by consumer-owned and investor-owned systems;

Reduce the costs of essential new power resources; and

Maintain a balanced decision-making process among federal, state and local governments, public agencies, private utilities and other responsible bodies.

Some of these elements would combine to remove supply uncertainties facing public agencies and direct service industries and reduce the intolerable rate disparities that would otherwise prevail within the region.

The bill would *not:*

Authorize the construction of generating plants, or of any type of generating plants;

Foreclose development of other effective methods of participation in planning by state or local governments;

Establish either the need or the lack of need for additional generating plants; or

Eliminate any presently required federal, state, or local permits, licenses, consents or other authorizations.

1. *The Conservation Program.* Conservation standards for efficiency in energy use must be promptly adopted and implemented. Standards would be established for a broad range of uses—residential, commercial, industrial and agricultural. The four Northwest States are to agree on regional standards, but if they fail, BPA would establish them. If any state or political subdivision failed to adopt the standards after they had been established, utility systems within that state or subdivision would be able to purchase power from BPA only at a minimum surcharge of 50 percent. Proceeds of the surcharge would finance conservation programs and reduce power rates in complying areas.

The bill sets up a $300 million revolving loan fund for conservation loans, permitting such programs as interest-free insulation loans to consumers. Grants could also be made and BPA could fund conservation investments that promise significant gains in efficiencies.

2. *Pooling—Allocation of Costs.* The bill authorizes BPA to purchase the output of new plants when designated by PNEPCO, the regional planning body; to acquire up to 4000 mw of capacity from the private companies at average system cost; and to sell such power under three Rate Groups, A, B and C.

a. Rate Group A would be an existing preference agency pool and would be the lowest cost pool. It would recover costs of up to 6090 mw of the Federal Base System—about two-thirds of present BPA capacity, including Federal hydro and thermal capacity previously acquired from public agencies under a limited hydro-thermal program developed earlier.

b. Rate Group B would be a blended pool of the costs of existing Federal hydro, public thermal, private hydro and thermal, and new resources sufficient for one-half of post-1983 load growth. It would carry higher costs than Rate Group A. Rate Group B would recover:

(i) The remaining Federal system costs (net—over a period of time—of secondary revenues);

(ii) The cost of up to 4000 mw of relatively inexpensive private utility power to be sold to BPA; and

(iii) The portion of costs of new resources related to one-half of the load growth of all utilities.

c. Rate Group C would recover costs not included in Rate Groups A and B and would be the highest cost pool.

d. Subsection 10(j) of the legislation provides that public bodies and cooperatives and/or private utilities—each as a class—would be ensured of whatever advantages might accrue to them from the costs of their own new resources, when the difference between the costs of all new resources, as a whole, was one percent or more greater than costs from their new resources as a class.

Chart 1, attached, depicts the costs and distribution of costs of the three rate groups.

3. *PNEPCO—The Regional Planning Organization.* The legislation recognizes a new regional planning body, the Pacific Northwest Electric Planning and Conservation Organization ("PNEPCO"). PNEPCO would be a non-profit corporation with membership open to all utilities in the region. Under PNEPCO, power planning would be more regional and more open than ever before. The PNEPCO board of directors would be evenly divided between public and private utility representatives. BPA and the Governors of each Northwest state could designate representatives to attend and participate in all PNEPCO meetings. PNEPCO's most important responsibilities would include preparation of regional load forecasts (taking into account the effects of conservation) and designation of the generating facilities or systems from which BPA may make long-term power purchases. All PNEPCO board meetings at which load forecasts or resource designation decisions are considered would be open to the public. Standards are included in the legislation to insure that no unnecessary new plants are built, that necessary plants are built without unnecessary costs, and that promising new technologies can be developed.

Chart 2, attached, depicts the steps required for designation of new resources.

[Charts not printed in RECORD]

SNOHOMISH COUNTY,
PUBLIC UTILITY DISTRICT NO. 1,
Everett, Wash., September 8, 1977.

Hon. HENRY M. JACKSON,
U.S. Senator,
Russell Building,
Washington, D.C.

DEAR SENATOR JACKSON: It is our understanding that you will be introducing by request on September 9, 1977, a regional power bill drafted by the Pacific Northwest Utilities Conference Committee (PNUCC). As you know, the Public Utility District of Snohomish County (the "District") has certain reservations about the PNUCC legislation, particularly regarding its adverse impact on power costs of public utilities and the national public power concern over its effect upon the preference rights of public agencies to Federal hydro-electric power.

Accordingly, the District has drafted amendments to the PNUCC legislation and we enclose copies of the same. The purpose of this letter is to respectfully request you to introduce these proposed amendments at the same time as you introduce the PNUCC legislative proposal.

We are also enclosing a statement explaining our amendments and further request that you file this explanatory statement when you introduce our amendments.

Thank you for your assistance.

Yours very truly,

W. G. HULBERT, Jr.,
Manager.

STATEMENT OF PUBLIC UTILITY DISTRICT NO. 1 OF SNOHOMISH COUNTY IN SUPPORT OF ITS REQUESTED AMENDMENTS TO PACIFIC NORTHWEST UTILITIES CONFERENCE COMMITTEE (PNUCC) REGIONAL POWER LEGISLATION

A group consisting of representatives of public and private power and aluminum industries of the Northwest, known as the Pacific Northwest Utilities Conference Committee (PNUCC), has drafted regional power legislation and requested its introduction in Congress. Although the Public Utility District No. 1 of Snohomish County, Washington, (the "District") strongly supports the concept of a regional power program for the Pacific Northwest and participated in the PNUCC, the District early announced its reservations concerning certain aspects of the proposed legislation, stating it would withhold approval until the complicated plan documents were completed. Upon reviewing the final draft, the District determined that it could not support the PNUCC legislative proposal in its entirety, although many aspects merited the District's support. Generally, the District concluded the final draft overall was not fair and equitable to public power in the Northwest, requiring public power to concede too much for the benefit of private power and the aluminum industry. At the same time, the District was also concerned about the PNUCC bill's effect upon the preference rights of public agencies and cooperatives to power generated by Federal hydroelectric facilities. The District's concern over the PNUCC bill's effect upon the preference clause was subsequently shared by public power throughout the nation as they become familiar with the details of the PNUCC proposal.

Clearly, many aspects of the PNUCC proposal have merit. For example, the proposed legislation includes a strong regional conservation program, will result in regional power planning for the Pacific Northwest, will minimize the environmental impacts through more efficient operation of existing generating facilities and better planning for new generating facilities, and will establish a framework for Federal, state and local cooperation which could serve as a model for other regions of the country. Accordingly, the District has analyzed the PNUCC proposal carefully with a view towards developing amendments which would preserve the many advantages of the proposed legislation, yet resolve the national concern over preference power and, also, provide a more fair and equitable allocation of the costs and benefits from a regional power program between public and private power interests in the Pacific Northwest.

The District has drafted amendments to the PNUCC legislation which it believes satisfy those objectives. The purpose of this Statement is to explain in some detail the nature of the amendments, provide some additional background, and explain the impact of the District's amendments upon the PNUCC legislation. Preliminarily, it should also be observed that the PNUCC group has been pushing for prompt introduction of its bill in Congress which has restricted the scope of the District's ability to develop amendments. As a result, the District has tried to keep its amendments simple and within the framework of the existing PNUCC legislation. Also, the District has not attempted to amend the numerous proposed contracts and other plan documents prepared by the PNUCC group to implement the proposed legislation. Those documents, of course, must be modified in accordance with any amendments to the PNUCC bill.

Generally, the District's amendments simply change certain sections of the PNUCC bill to alter the flow of Federally generated hydro power (preference power), resulting in

the existing public agencies of the Pacific Northwest receiving their preference rights to hydro power at the hydro cost. This amendment satisfies the primary objectives of the District.

First, by increasing the amount of lower cost hydroelectric power available to the public agencies over the duration of the regional power proposal, the District shifts the balance of benefits and costs under the PNUCC bill to achieve a more fair and equitable accommodation of the interests and rights of public power vis-a-vis those of private power and the aluminum industry. From an economic standpoint, the practical effect of the District's amendments is to lower the bulk power costs of the public agencies and increase the amount of such low-cost power available. Correlatively, the power costs of private power in the Pacific Northwest is increased slightly and the power costs of the aluminum industries are increased slightly more.

But the District does not believe that this shifting of benefits alters the feasibility of the regional power program. Clearly, the aluminum industry and private power will not get as good a deal as they would under the PNUCC proposal. But there are still substantial benefits for private power and the aluminum industry. For example, the District believes that the primary need of the aluminum industry in the Pacific Northwest is an assurance of a future power supply. The District's proposed amendments do not alter the amount of power made available to the aluminum industry under the PNUCC bill; instead, the District's amendments merely increase slightly the cost of such power without reducing the amount of power available. Likewise, although the District's amendments will increase slightly the power costs of private power as compared to private power costs under the PNUCC bill, there still remain the benefits to private power including Federally backed financing of new generating facilities. The overall effect of the District's amendments merely adjusts the benefits from a regional power program which the District believes is more fair and equitable to public power in the region, while still preserving the basic overall benefits to the region.

Secondly, by reserving the low-cost hydroelectric power for the existing public agencies of the Northwest, the District's amendments preserve public power's preference rights and therefore satisfy the national concern of public power to the PNUCC bill. In that regard, we would be remiss if we did not comment upon the strong opposition to the PNUCC proposal manifested by public power across the nation because of the preference problem. Indeed, the District became concerned that the PNUCC proposal could not be passed in Congress with the national public power opposition which was developing.

The District's awareness of the preference problem led to a detailed study of the entire concept of preference power. Our research disclosed that more than 30 pieces of national legislation establish the preference concept.

By way of background, the Bonneville Project Act includes a most explicit and clear statement of the preference clause. In directing the BPA Administrator to give preference to public bodies and cooperatives for electric energy generated by the Federal hydroelectric facilities of the Bonneville Project, Congress specifically stated:

"In order to insure that the facilities for the generation of electric energy at the Bonneville Project shall be operated for the benefit of the general public, and particularly domestic and rural consumers, the Administrator shall at all times in disposing of electric energy generated at the Project give preference and priorities to the public bodies and cooperatives."

Thus, Congress has made clear its intent that public bodies and cooperatives shall have preference rights to Federally generated hydro power. The District and national public power representatives became concerned that the PNUCC bill, by authorizing private power and the aluminum industry to obtain Federally generated hydroelectric power at the expense of public power, constituted an erosion of the preference rights of public agencies to Federally generated hydroelectric power.

Perhaps a brief comment on the historical origin of the preference concept is in order. Similar preference clauses appear in numerous Federal power marketing acts. Generally, the preference concept is based upon the long-standing philosophy that the benefits derived from Federal investment on the free-flowing rivers of the United States must be reserved for the public; such benefits should not enure to the stockholders of private companies. This concept, of course, applies to the PNUCC bill which, as presently drafted, would permit the stockholders of the private power companies and aluminum companies of the Pacific Northwest to share in the benefits of the Federally generated hydroelectric power.

With this background, let's take a closer look at the District's amendments. The District proposes to amend the PNUCC legislation to redefine Federal Base System cost as being the cost associated with the Federal hydroelectric system on the Columbia River. Thus, Rate Group A of the PNUCC bill would consist entirely of Federal hydro power at the Federal hydro cost and the entire capability of the Federal hydro system would be available as needed by the existing preference agencies of the Northwest. To illustrate how the regional program would work under the PNUCC bill as amended by the District, attached please find three exhibits demonstrating the distribution of power in the years of 1979–80, 1989–90, and 2012–13, respectively.*

We would be remiss if we did not acknowledge that the District's amendments do raise additional questions. For example, questions have been asked concerning the impact of our amendments upon the tax-exempt status of previously issued bonds. To those questions, we have received informal opinions from competent attorneys that our proposed amendments would have no greater effect upon the tax-exempt status of such bonds than the "gating" operation or other aspects of the PNUCC proposal. To the questions of the status of existing net billing contracts, it is our opinion that such contracts can remain in effect and operable under our amendments. It is probable that payments will have to be made by the BPA Administrator in accordance with Section 7(b) of the net billing agreement, but that is not a detriment. We are also convinced that the BPA payout schedule is not affected by our amendments because BPA will recover its costs associated with the net billed plants from Rate Group B as part of the overall revenue income.

Moreover, there may be additional questions raised by our amendments. But the PNUCC proposal itself raises many questions. By proposing these amendments, the District does not purport to have answers to all of the questions asked or likely to be asked in the future, nor to suggest that its amendments answer all of the questions. Instead, is is our hope and belief that our proposed amendments will lead to a fair and equitable balancing of the costs and benefits of a regional power program throughout the Pacific Northwest and, most importantly, result in a regional plan which can be supported by public power nationally and gain approval of Congress.

*The charts referred to may be obtained through the Senate Committee on Energy and Natural Resources.

By Mr. CRANSTON:

S. 2081. A bill to provide for the extension and expansion of the Head Start program; to the Committee on Human Resources.

Mr. CRANSTON. Mr. President, it is with great pleasure that I introduce today S. 2081, a bill to extend and increase the authorizations of appropriations for the Head Start program through fiscal year 1981. I am particularly pleased to be introducing this bill because of my longstanding support of the Head Start program and because of my newly assumed chairmanship of the Child and Human Development Subcommittee of the Human Resources Committee.

LONG COMMITMENT TO HEAD START

Mr. President, the Head Start program has been a particular interest of mine since I first came to the Senate. Over the years, I have fought many battles for the Head Start program—both to insure that sufficient funds were appropriated to support its important activities and to secure passage of legislation to enhance and improve it. I have successfully struggled against the attempts of previous administrations to cut back Head Start funding and to impose arbitrary limitations upon program initiatives.

It has been particularly heartening that over the years the supporters of the Head Start program in the Senate have been bipartisan. I have worked on the Head Start program in past years with such esteemed colleagues as the Senator from New York (Mr. JAVITS), the Senator from Wisconsin (Mr. NELSON), and of course, the steadfast champion of the program and chairman of the Human Resources Committee, the Senator from New Jersey (Mr. WILLIAMS). I look forward to continuing to work closely with these colleagues and other members of the Human Resources Committee and the Senate during the coming months as we guide Head Start extension legislation through the legislative process.

CHILD AND HUMAN DEVELOPMENT SUBCOMMITTEE

Mr. President, I am also delighted to be introducing this legislation in light of my responsibilities as chairman of the Child and Human Development Subcommittee of the Human Resources Committee. As the newly designated Child and Human Development Subcommittee builds upon the work of its predecessor, the Children and Youth Subcommittee, chaired by one of the foremost advocates for children's interests, Vice President MONDALE, we will be focusing our attention on many programs dealing with children—particularly those involving early childhood development.

As the subcommittee works on the development of comprehensive child care legislation, we will be looking closely at Head Start programs throughout the

Nation and examining their roles in the vital area of early childhood development. Toward that end, I will be convening hearings of the Child and Human Development Subcommittee on the subject of child care and Head Start programs in November and December in California to be followed by subsequent hearings in other areas of the country and in Washington early next year. The experiences and insights gained from the many successes of the Head Start program will be of enormous benefit to the members of the Child and Human Development Subcommittee as we move forward with our important task of developing programs and legislation to address the many unmet needs of children in this Nation.

HISTORY OF THE HEAD START PROGRAM

Mr. President, the Head Start program was conceived of in the early 1960's as a child development program which could be funded by the newly mandated local antipoverty agencies as part of community-based efforts to overcome early childhood handicaps faced by children from poverty families. In a report which became the springboard for the Head Start program, Dr. Robert Cooke, pediatrician-in-chief of Johns Hopkins Hospital and chairman of a panel of experts brought together to develop a blueprint for an early childhood development program, stated:

> There is considerable evidence that the early years of childhood are a most critical point in the poverty cycle. During these years, the creation of learning patterns, emotional development and formation of individual expectations and aspirations take place at a very rapid pace. For the child of poverty, there are clearly observable deficiencies in these processes, which lay the foundation for a pattern of failure, and thus a pattern of poverty throughout the child's entire life.

The Head Start program was thus designed, Mr. President, as a massive attempt to help break the cycle of poverty for young children at a critical time in their lives and provide them with the support they need to overcome an impoverished environment. Today, after more than a decade of operations, Head Start has become synonymous with innovative preschool child development efforts. It is a strong and healthy program which is one of the true success stories of the antipoverty programs of the 1960's.

THE HEAD START PROGRAM TODAY

Mr. President, since the Head Start program was launched in the summer of 1965, it has served over 6 million children and their families. Today, it consists of a national network of over 1,200 full-year programs and 200 summer programs serving approximately 349,000 children and their families each year. This network of Head Start programs are operating by a wide variety of community-based public and private agencies.

Each Head Start program must provide services to its children and families in particular areas, such as health—including dental and mental health—nutrition, education, and social services. However, considerable latitude is provided to permit individual communities to develop and implement programs which are tailored to each community's particular needs in these areas.

PROGRAM ASPECTS—HEALTH, EDUCATION, AND NUTRITION SERVICES

Mr. President, the program's accomplishments in each of the principal service areas are remarkable. For example, in the area of health, during a recent Head Start year, 30 percent of all enrolled children—or 90,000 children—required medical treatment and at least 90 percent—or 216,000 children—received such treatment. Approximately 270,000 children—or 90 percent—enrolled in Head Start in the same year completed their immunizations for DPT, polio, measles, and rubella. This is contrasted with a 50-percent immunization rate for children not in Head Start.

Each Head Start program also provides food services which supply one-half to two-thirds of a child's daily nutritional needs, as well as consumer information and guidance in the selection and preparation of foods to meet family needs. The educational components of the Head Start program provide initial educational experiences and activities designed to help Head Start children develop socially, intellectually, and emotionally. They are provided in a supportive climate which helps establish in each child the self-reliance, self-esteem, and self-confidence essential to later educational achievements.

PARENTAL INVOLVEMENT—KEY TO SUCCESS

Perhaps the most important feature of the Head Start program is the involvement of parents in all aspects of the child's development and in program planning and administration. Indeed, at the very heart of the Head Start philosophy is the belief that successful early childhood development can be achieved only with the active participation of parents.

Mr. President, since its beginning, Head Start has emphasized and pioneered the concept of parental involvement as an indispensable part of preschool child development programs. Head Start programs have consistently striven towards supporting and enhancing the role of parents as the principal influence in the education and development of their children.

Parents are constantly encouraged to be involved in every aspect of the Head Start program, from planning and decisionmaking to participating in classroom and other activities as paid employees, volunteers, and observers. Head Start programs also provide programs and activities specifically for parents which are designed to enhance their own growth and development. These activities may include consumer education classes, home management courses, and similar subjects.

Mr. President, there is a substantial body of data on early childhood development programs which indicates that the developmental gains achieved by children in these programs are more likely to be maintained when parents are involved in working with their children. The success of the Head Start program is, I believe, at least partly attributable to this strong commitment to parental involvement as an essential component of each project.

EVIDENCE OF HEAD START'S EFFECTIVENESS

Mr. President, I mentioned earlier that Head Start has been widely recognized as one of the true success stories of the antipoverty programs of the 1960's. This conclusion has recently been supported by findings of the Social Research Group of George Washington University. This group recently assembled a collection of virtually all the studies of the Head Start program to date. They compiled over fifty studies conducted since 1969 that contained original data on the Head Start program or its experimental programs. Taken together, these studies strongly support the effectiveness of Head Start in helping children and their families.

The George Washington University report indicated that the majority of these studies showed improvement in performance on standardized tests of intelligence or general ability and that Head Start was "effective in preparing children for later reading achievement". The research findings also revealed "lower absenteeism, fewer cases of anemia, more immunizations, better nutrition practices and, in general, better health among children who had participated in Head Start."

According to the Assistant HEW Secretary for Human Development, Anabella Martinez, in House testimony on July 22, 1977: "A growing number of studies also indicate that the benefits of participating in a Head Start program are sustained into the second, third, and fourth grades and beyond."

FISCAL PROBLEMS

Despite the proven success of the Head Start program, it has been seriously underfunded for many years. Because of minimal appropriation levels sought by previous administrations, it is estimated that only 15 percent of eligible children are actually served in Head Start programs. A series of tight budgets, inflation, and the addition of major new program requirements—such as the 10 percent handicapped children enrollment requirement—during the past several years have placed great fiscal pressures upon Head Start programs merely to maintain existing levels of service quality.

Mr. President, because of my grave concern that these fiscal constraints were not only limiting participation to a small percentage of needy children, but also were seriously threatening the quality of the program, I worked earlier this year for increased funding of Head Start in both the Senate Budget Committee and the Appropriations Committee. I am pleased that with the full support of the chairman of the Labor-HEW Appropriations Subcommittee, the Senator from Washington (Mr. MAGNUSON), the Senate approved in the 1978 Labor-HEW Appropriations Act an increase in the appropriations for the Head Start pro-

gram from the $475 million 1977 fiscal level to $655 million for fiscal year 1978. The Senate-House conference agreement, still pending resolution of the Hyde amendment, provides $625 million for fiscal year 1978, which amounts to a $150 million increase over the 1977 fiscal year level.

While this may appear on the surface to be a considerable increase in the program's funding, the fact that the program had remained at the same service level for over a decade, coupled with rising inflation and other program demands, means that the increase will permit an expansion in enrollment of less than 25 percent. Thus, even at the projected increase fiscal year 1978 funding level, the Head Start program will be serving less than 20 percent of the children eligible for and in need of its services.

Mr. President, I am deeply concerned that we commit to this program—which has proven itself to be one of the few truly successful mechanisms for breaking the cycle of poverty which denies so many of this Nation's children equal social and educational opportunities—the quality and quantity of resources it deserves.

SUMMARY OF THE HEAD START EXTENSION ACT OF 1977

Mr. President, the purposes of the legislation which I am introducing today are to extend and expand the authorization appropriations for the Head Start program through fiscal year 1981 and to make certain changes in the act—basically of a reinforcing or technical nature—which I will describe in a moment.

Other areas not addressed in the legislation must also be carefully and fully explored. These include the needs of bilingual children, the special problems of migrant children in Head Start, strengthening of parent and community involvement, and low-income eligibility criteria.

Mr. President, I would like to highlight briefly the major provisions of S. 2081.

First, the measure provides for extension of the authorization of appropriation for the Head Start program through fiscal year 1981 and authorizes the following levels: $650 million for fiscal year 1978—the funding recently approved in conference on the Labor-HEW Appropriations Act for fiscal year 1978 is $625 million—$750 million for fiscal year 1979, $850 million for fiscal year 1980, and $1 billion for fiscal year 1981. I believe that these are realistic and achievable levels that will allow for the continued expansion of programs—in terms of the number of children enrolled and the number of communities participating—as well as the qualitative improvement of on-going programs which have been fighting to hold the line against inflation and rising costs with stagnant levels of funding. The $1 billion appropriation authorized for fiscal year 1981 would provide for an increase in the children served to between 500,000 and 600,000—even then, less than 25 percent of those needing Head Start help.

Second, the bill would codify an ongoing practice of the program—that is, the involvement of parents and the community affected by the program in the selection of Head Start agencies in their areas. I believe this is a particularly important factor since it will continue to insure, as the program grows larger, that not only the parents of Head Start children are aware of and involved in the programs, but also that the affected community at large has an opportunity to participate in the selection of program agencies.

Third, in a closely related area, the measure would reinforce the role of parents and the affected residents of the community in the decisionmaking process within the individual Head Start agencies. The bill would require such agencies to establish procedures for parents and area residents to directly participate in decisions relating to the character of programs. While it is not possible to legislate the attitudes and meaningful involvement of the community and parents, I believe it is extremely vital that we take all practical steps to encourage and facilitate it.

Fourth, the legislation would make a number of changes in the legislation that would simplify and make more manageable the national administration of the Head Start program. The bill also would make a series of technical amendments to correct certain editorial oversights in the 1974 legislation.

Fifth, and finally, the bill would require that in the future all Head Start programs and projects are operated in accordance with performance standards that are no less comprehensive than those in effect on the date of enactment. This addition to the act would guarantee the continued quality of existing standards and is particularly important in order to insure that the program continues to provide high quality services to children and their families.

CONCLUSION

Mr. President, in closing, I want again to stress my desire to work closely with the members of the Human Resources Committee—especially Senators NELSON, JAVITS, and WILLIAMS, whose historic support I previously noted—as we strive to develop this legislation further. I believe that, as always, the cooperative and effective working relationship we have developed through the years will result in extension legislation that will truly benefit our Nation's preschool poverty children.

Mr. President, I ask unanimous consent that the text of the bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2081

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Headstart Extension Act of 1977".

SEC. 2. Section 512 of the Economic Opportunity Act of 1964 (hereinafter referred to as "the Act") (42 U.S.C. 2928a) is amended by striking out the period at the end thereof and inserting the following: "and $650,000,000 for fiscal year 1978, $750,000,000 for fiscal year 1979, $850,000,000 for fiscal year 1980, and $1,000,000,000 for fiscal year 1981.".

SEC. 3. Section 513(a) of the Act (42 U.S.C. 2928(a)) is amended by—

(a) striking out "The" and inserting in lieu thereof "Except as otherwise provided in this part, the"; and

(b) striking out "fiscal year 1975" and inserting in lieu thereof "fiscal year 1978".

SEC. 4. Section 514(c) of the Act (42 U.S.C. 2928(c)) is amended by adding at the end thereof the following new sentence: "The Secretary shall require that parents and area residents affected by the program be significantly involved in the selection of Headstart agencies.".

SEC. 5. Section 515(b)(1) of the Act (42 U.S.C. 2928(b)(1)) is amended by inserting "directly participate in decisions that" after "to".

SEC. 6. Section 517(b) of the Act (42 U.S.C. 2928f(b)) is amended by striking out "six" and inserting in lieu thereof "twelve" in the last sentence.

SEC. 7. (a) Section 523(b) of the Act (42 U.S.C. 2928l(b)) is amended by—

(1) inserting after "(1)" after "subsection (a)";

(2) striking out "subsection (b)" and inserting in lieu thereof "subsection (a)(2)"; and

(3) striking out "thirty" the second place it appears therein and inserting in lieu thereof "ninety".

(b) Section 523(c) of the Act (42 U.S.C. 2928l(c)) is amended by striking out "Director" and inserting in lieu thereof "Secretary".

(c) Section 523(d) of the Act (42 U.S.C. 2928l(d)) is amended by striking out "Director" and inserting in lieu thereof "Secretary" in both places it appears.

SEC. 8. Section 524(b) of the Act (42 U.S.C. 2928m(b)) is amended by amending the first sentence thereof to read as follows: "The Secretary shall operate the programs and projects covered by this part in accordance with Headstart performance standards established by him. Any revisions in such standards shall result in standards which are no less comprehensive than those in effect on the date of enactment of the Headstart Extension Act of 1971.".

ADDITIONAL COSPONSORS

S. 364

At the request of Mr. HART, the Senator from New Jersey (Mr. CASE) was added as a cosponsor of S. 364, the Veterans' Administration Administrative Procedure and Judicial Review Act.

S. 972

At the request of Mr. NELSON, the Senator from New Jersey (Mr. CASE), the Senator from Colorado (Mr. HASKELL), the Senator from Maryland (Mr. MATHIAS), the Senator from Oregon (Mr. PACKWOOD), the Senator from Tennessee (Mr. SASSER), and the Senator from Vermont (Mr. STAFFORD), were added as cosponsors of S. 972, the Small Business Development Center Act.

S. 1281

At the request of Mr. HART, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 1281, the National Materials Policy Act.

S. 1493

At the request of Mr. HART, the Senator from Montana (Mr. MELCHER) was added as a cosponsor of S. 1493, the Inland Energy Development Impact Assistance Act.

S. 1587

At the request of Mr. STONE, the Senator from Alabama (Mr. ALLEN) and the Senator from Michigan (Mr. RIEGLE) were added as cosponsors of S. 1587, a bill to amend the Internal Revenue Code of 1954 to exempt certain State and local government retirement systems from taxation, and for other purposes.

S. 1950

At the request of Mr. MOYNIHAN, the Senator from West Virginia (Mr. ROBERT C. BYRD), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Florida (Mr. STONE), the Senator from Montana (Mr. MELCHER), the Senator from Kansas (Mr. DOLE), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from Hawaii (Mr. INOUYE), the Senator from Florida (Mr. CHILES), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. BROOKE), the Senator from Hawaii (Mr. MATSUNAGA), the Senator from South Carolina (Mr. THURMOND), and the Senator from Michigan (Mr. RIEGLE) were added as cosponsors of S. 1950, the Foreign Surveillance Prevention Act.

S. 1960

At the request of Mr. HEINZ, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 1960, to establish a National Endowment for Children's Television.

S. 1974

At the request of Mr. NELSON, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 1974, the Regulatory Flexibility Act.

S. 2009

At the request of Mr. DOMENICI, the Senator from North Dakota (Mr. BURDICK) was added as a cosponsor of S. 2009, the Home Care Services bill.

SENATE CONCURRENT RESOLUTION 26

At the request of Mr. CRANSTON, the Senator from Hawaii (Mr. INOUYE), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Ohio (Mr. METZENBAUM), the Senator from Indiana (Mr. BAYH), the Senator from Arkansas (Mr. BUMPERS), and the Senator from North Dakota (Mr. BURDICK) were added as cosponsors of Senate Concurrent Resolution 26.

AMENDMENTS SUBMITTED FOR PRINTING

REORGANIZATION OF THE EXECUTIVE BRANCH—S. 1209

AMENDMENT NO. 840

(Ordered to be printed and referred to the Committee on Governmental Affairs.)

Mr. HUDDLESTON submitted an amendment intended to be proposed by him to the bill (S. 1209) to reorganize the executive branch of the Government by consolidation of functions and to increase efficiency and coordination in the area of disaster assistance, emergency preparedness, mobilization readiness, and for other purposes.

NATIONAL ENERGY CONSERVATION POLICY ACT—S. 2057

AMENDMENT NO. 841

(Ordered to be printed and to lie on the table.)

Mr. PERCY. Mr. President, today I am submitting an amendment to the National Energy Conservation Policy Act, S. 2057. I ask unanimous consent that the text of the amendment, together with a letter concerning this amendment which I sent to my colleagues today, be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 841

On page 76, between lines 15 and 16, insert the following:

PART G—FEDERAL EMPLOYEE PARKING

SEC. 371. (a) No real property located in the United States, which is owned or leased by, or otherwise under the jurisdiction of the United States Government, which is principally utilized, as determined by the Administrator of General Services, to provide parking facilities for privately owned motor vehicles in connection with employment, business, or visitation at Federal offices or installations, may be utilized for such purpose unless there is assessed against each such vehicle a charge or fee within the range of charges or fees generally applicable for public parking purposes in similar facilities in the same general locality.

(b) Used in this section the term "similar facilities" shall refer to publicly available parking facilities in nearby business or commercial areas which are of the same kind (lot, garage, or on-street parking), convenience, and quality as that granted on the Federal property. If such similar facilities do not exist in nearby areas a fee shall be assessed which reflects fees charged in any public or private parking facility in a comparable area elsewhere in the United States.

(c) The restrictions imposed by subsection (a) of this section shall not be applicable to parking facilities provided in connection with any Federal employee's residence, including, but not limited to, housing and visitation facilities at military bases and installations.

(d) The Administrator of General Services, the Director of the Administrative Office of the United States Courts, and the Architect of the Capitol shall take such steps as may be necessary to coordinate the respective activities of the Executive, Judicial, and Legislative Branches of the Government in the implementation of the restrictions imposed under subsection (a) of this section.

(e) The provisions of this section shall become effective upon enactment; except that the restrictions imposed by subsection (a) of this section shall become effective on the first day of the first month which begins more than 90 calendar days after the date of enactment of this Act.

(f) All revenues collected pursuant to the provisions of this section shall be deposited into the Treasury of the United States as miscellaneous receipts.

On page 3, the Table of Contents is amended by inserting immediately after section 361 the following:

"PART G—FEDERAL EMPLOYEE PARKING

"SEC. 371. Federal employee parking.".

U.S. SENATE,
Washington, D.C., September 9, 1977.

DEAR COLLEAGUE: I feel that we in the Congress have a special obligation to observe the maxim that "energy efficiency begins at home." The National Energy Plan bills now before us would mandate sacrifices by most citizens. We have a public duty to our constituents to accept necessary adjustment ourselves. I, therefore, plan an amendment to the National Energy Conservation Policy Act, S. 2057, to end subsidized parking for congressional and Federal employees.

Under my amendment all Federal and Congressional workers would pay parking fees based on prevailing market rates in their areas. Exceptions would be granted for employee housing, such as military housing. Fees would not, of course, be imposed in suburban and rural areas where parking is now free. Revenues raised would revert to the Treasury.

My amendment would accomplish several goals. First, it would save energy by encouraging use of mass transit and car pooling. Second, it would end an unfair taxpayer-financed subsidy. Third, any reduction in auto traffic, especially in cities such as Washington, would reduce air pollution. Fourth and most important, it would tell our constituents that their elected representatives are willing to do more than simply impose restrictions on the rest of the country because of the energy crisis.

Senator Gary Hart offered an amendment to the legislative appropriations bill which would have required fees for Congressional employees. Some objected to not requiring fees from all federal workers, and others objected to basing rates on salaries. My amendment avoids both problems.

I can see only one argument against user fees for federal parking: the self-interest of ourselves, our staffs, and other federal employees in maintaining this free favor.

I welcome your support. For more information, or to join as a sponsor of this amendment, please contact me, or have your staff contact Ron Lanoue (4-2174) or Chris Palmer (4-1462).

Sincerely,

CHARLES H. PERCY,
U.S. Senator.

AMENDMENTS NOS. 843 THROUGH 847

(Ordered to be printed and to lie on the table.)

Mr. BROOKE submitted five amendments intended to be proposed by him to the bill (S. 2057), the National Energy Conservation Policy Act.

NATIONAL CRUDE OIL SUPPLY AND TRANSPORTATION ACT—S. 1868

AMENDMENT NO. 842

(Ordered to be printed and referred jointly to the Committee on Commerce, Science, and Transportation and the Committee on Energy and Natural Resources.)

Mr. MELCHER submitted an amendment intended to be proposed by him to the bill (S. 1868) entitled the National Crude Oil Supply and Transportation Act of 1977.

PACIFIC NORTHWEST ELECTRIC POWER SUPPLY AND CONSERVATION ACT—S. 2080

AMENDMENT NO. 848

(Ordered to be printed and referred to the Committee on Energy and Natural Resources.)

Mr. JACKSON (by request) submitted an amendment intended to be proposed by him to the bill (S. 2080) to make the Federal Columbia River Power System available for maximum electric efficiency for future essential power supply to pro-

mote conservation, and for other purposes.

REGULATORY FLEXIBILITY ACT—S. 1974

AMENDMENT NO. 849

(Ordered to be printed and referred to the Committee on the Judiciary.)

Mr. NELSON (for himself and Mr. CULVER) submitted an amendment intended to be proposed by them jointly to the bill (S. 1974) to amend section 553 of title 5, United States Code, to improve Federal rulemaking by creating procedures for regulatory issuance in two or more parts.

NOTICES OF HEARINGS

SMALL BUSINESS ADMINISTRATION PAPERWORK

Mr. NELSON. Mr. President, I wish to announce that the Select Committee on Small Business Subcommittee on Government Regulation has scheduled a hearing on the paperwork requirements of the Small Business Administration. The hearing will be held on September 21, 1977, in room 424 Russell Senate Office Building at 10 a.m. Presiding will be the Senator from New Hampshire (Mr. MCINTYRE), chairman of the subcommittee.

Further information can be obtained from the offices of the Small Business Committee, room 424 Russell Office Building, telephone 224–2130.

SUBCOMMITTEE ON PARKS AND RECREATION

Mr. ABOUREZK. Mr. President, I would like to announce for the information of the Senate and the public, the scheduling of public hearings before the Parks and Recreation Subcommittee of the Senate Energy and Natural Resources Committee.

The hearings are scheduled for September 19 and 20, 1977, beginning at 7 p.m., in room 3110 of the Dirksen Senate Office Building. Testimony is invited on S. 1180, to designate certain endangered public lands for preservation as wilderness, to provide for the study of additional endangered public lands for such designation, to further the purposes of the Wilderness Act of 1964, and for other purposes.

For further information regarding the hearings you may wish to contact Mr. Thomas Williams of the subcommittee staff on extension 47145. Those wishing to testify or who wish to submit a written statement for the hearing record should write to the Parks and Recreation Subcommittee, room 3106, Dirksen Senate Office Building, Washington, D.C. 20510.

SUBCOMMITTEE ON CIVIL SERVICE AND GENERAL SERVICES

Mr. SASSER. Mr. President, the Subcommittee on Civil Service and General Services had previously announced hearings on S. 666 for September 15, 1977, at 9 a.m. in room 6202 Dirksen Senate Office Building.

However, because of a scheduling conflict, those hearings have now been rescheduled for Tuesday, September 13, 1977, at 9:30 a.m. in room 457 Russell Senate Office Building.

The hearings on S. 666 will immediately follow the apportionment hearings which will commence at 8:30 a.m.

VETERANS BENEFITS PROGRAM IN THE PHILIPPINES NEEDS AN OVERHAUL—NOW

Mr. PROXMIRE. Mr. President, on August 31, I chaired a hearing of the HUD-Independent Agencies Appropriations Subcommittee which showed beyond a shadow of a doubt that serious and shocking problems plague our VA benefits programs in the Republic of the Philippines. The testimony of Gregory Ahart, Director of the Human Resources Division of the General Accounting Office clearly indicated that an immediate reassessment of this program is in order. Veterans' Administration and State Department witnesses agreed that the program had serious defects. Inequities, abuses, and even fraud appear to be the rule rather than the exception and the hearing clearly showed that it is time to reexamine both our current and future obligations to Philippine veterans.

How much is our VA program in the Philippines costing the American taxpayer? Since 1946, it has cost $2 billion and could cost another $1.5 billion over the next 20 years even if no new beneficiaries are added to the rolls and no legislative increases are authorized. The program will cost $87 million in fiscal year 1978.

I wish to make it clear at the outset that we should not forget the contribution of thousands of Filipinos and their families to the battle in the Pacific during World War II. Filipino units and individual soldiers fought with excellence and great sacrifice. Why then, should the Congress consider an overhaul of our VA benefit program in the Philippines? Here are a few reasons:

First. The average Filipino VA beneficiary is paid 7½ times his country's median income while the average American vet gets a benefit which is about 70 percent of the median income in the United States.

Second. In some cases, Filipino veterans with treatable tuberculosis refuse to follow medical programs to arrest or control their disease because while disabled they will receive more money from VA than they could possibly earn if they recovered. After 20 years their 100 percent disability rating, which allows a full compensation payment, cannot be reduced so they finally take their medicine and recover.

Third. In many cases, the U.S. pays disabled Filipino veterans 15 times as much as a Filipino veteran would receive if he was paid through the Filipino government's own veterans benefit program.

Fourth. In the Philippines, as the GAO pointed out in its testimony, veterans' dependents can earn about as much from their educational assistance payments as the average Filipino college professor with a master's degree.

A blatant example of program abuse is the documented case of a Filipino veteran, returning from being AWOL, who was shot by a Filipino guard, and rated 100-percent disabled. Since incurring his "disability" he fathered 26 children—11 by his wife and 15 illegitimately by his wife's sister—thus entitling him to $627 per month in VA benefits plus another $204 per month for 18 children under the age of 23 years. So far he has received over $89,000 in VA benefits and if he lives a full life, the VA will pay him an additional $192,000 in monetary benefits and $118,000 in educational benefits to his children.

The examples cited above and the testimony of the General Accounting Office on August 31 indicate that there are two main areas of concern that should be addressed. The first problem is the growing inequality of benefit payments made to Filipino veterans in comparison to those made to American veterans. For example, the median family income in the Philippines is about $643 per year as compared with $13,700 in the United States. If American veterans in the United States were paid equal benefits on the same ratio to median family income as a Filipino veteran, a totally disabled veteran with a wife and two children would receive about $102,000 a year.

Mr. President, Public Law 79–301—the original legislation that authorized payment of monetary benefits to eligible veterans of Philippine units and their dependents—was based on the view of the Congress in 1946 that the average income, living costs and other related economic factors in the Philippines were lower than those in the United States and that those differences should be translated into a proportionately lower level of benefits for those Philippine citizens who were entitled to VA benefits. Compensation and pension benefits are basically intended to compensate the veteran or his dependents for the loss of earning power resulting from the veteran's disability or death. The distinguished late Senator from Arizona, Carl Hayden, who served as a member of the Filipino Rehabilitation Commission back in 1946, testified at that time that:

> The GI bill of rights is intended to benefit an American who served in the armed forces and who returns to civil life in the United States, where American standards of living prevail. . . . A Filipino veteran does not need 150 pesos a month in order that he may go to school or 40 pesos a week as unemployment compensation. . . . Whenever any part of the GI bill of rights is extended to Filipino veterans, the cost of living in the Philippines and other economic factors must be given careful consideration.

Over the years, due to the devaluation of the peso, unanticipated benefits have gone to Filipino veterans, and have compensated their beneficiaries at higher levels than American veterans. With the steady currency devaluation in the Philippines over the past 10 years, Filipino veterans' disability benefits, for example, increased over 700 percent whereas the comparable American veterans' benefits only increased 125 percent. This clearly was not the intent of Congress and the distortions that have evolved over the

past decade should demand our immediate attention.

Second, the overwhelming incentive to secure these lucrative VA benefits in the Philippines has fostered numerous abuses in the program and triggered attempts to defraud the system. Here are just a few of the abuses that have plagued our VA benefit program in the Philippines over the years.

The VA has reported numerous instances of aged and disabled veterans adopting children—in many cases their own relatives—for the sole purpose of gaining more benefits. In one case, a 70-year-old single veteran adopted his 6-year-old great-grandnephew, even though the natural parents were still alive and caring for the child in their own home. In another case, a single veteran, aged 69, adopted two great-grandnieces ages 4 and 8 months, despite the fact that the children remain in the custody of their natural parents. Part of this particular problem, admittedly, is the liberal adoption law in the Philippines.

The VA, however, has acknowledged this problem for years, but has done little if anything to curb these abuses. Add to this the rampant fathering of illegitimate children to increase benefits, as indicated by the example I cited earlier, and it is clear that the situation has gotten out of hand. The GAO has testified that VA's Manila office maintains no statistics on illegitimate children, nor has it studied potential abuses associated with their entitlement to VA benefits.

Mr. President, the educational benefits program is also subject to great abuse in the Philippines. Both the VA and college officials in the Philippines agree that many students enroll in courses solely for the income provided, rather than to acquire knowledge or a job skill. For example, a limited VA survey of eight former GI bill students, indicated that five were unemployed and two were employed at jobs unrelated to their training—one was selling seashells and one was driving a horse cart. Also, according to the registrars of the two colleges in the Philippines with the largest VA enrollment, few veteran students have finished their studies and graduated. They merely take assorted, often unrelated, courses until their entitlement period is over and then drop out. Also, the educational assistance benefits are so disproportionately high in the Philippines that there is a distinct incentive to stop working, get out of the labor force, and take the GI bill route as a student being paid an educational allowance. In fact, as I previously mentioned, students often earn far more than their well-educated professors. If comparable benefits were paid in the United States, veteran students would be paid between $25–30,000 a year to attend classes. These inequities are certainly not what the Congress intended when it drafted GI bill legislation.

Another recognized problem, outlined by the GAO last week, involves so-called claim fixers—clever, often unscrupulous persons who prepare claims for veterans and take a portion of the monthly benefits in payment for their "services." The problem of this "army of chiselers" is compounded by the availability of all types of readily procurable false documentation, such as death certificates, medical certificates, military service or disability papers and school attendance records. The recording of deaths, for example, requires merely an oral notification.

These claim fixers were hard at work in 1976, pouring 1,700 new disability compensation claims into the VA Manila office, tying up expensive VA personnel for months; 99 percent of the claims were thrown out.

Finally, Mr. President, what I find to be the most shocking and distasteful ploy used to secure disability benefit payments is the refusal of some Filipino veterans to take prescribed medication, as I mentioned earlier, in an intention effort to prolong a treatable illness, such as pulmonary TB, until they pass the statutory 20-year vesting period, after which their benefits cannot be reduced. At that point, they take their medicine and recover. The result is that you not only have a ripoff of the American taxpayer, but you have a tragic prolongation of illness and disability on the part of the beneficiary. The VA, in its testimony last week, seemed to indicate that there is nothing they can, or are willing to do to curb this flagrant and dangerous abuse of the compensation payment program.

Mr. President, the Filipinos were valuable allies during World War II. Anyone who has seen the movie "MacArthur" cannot help but be moved by the courage and tenacity of the Filipino units. However, the growing inequality of benefits paid to Filipino veterans in comparison to American veterans, coupled with the widespread abuse and fraud in our VA benefit program in the Philippines, should indicate to the Congress that the time has come to overhaul this program by making adjustments in existing law. I have asked the Veterans' Administration, in cooperation with both the State Department and the General Accounting Office, to provide my subcommittee by the first of next year with a package of legislative and administrative recommendations for correcting the inequities in our Philippine veterans benefits program. I have expressed my hope that the "package" would be reflected in a reduced budget request for the various Philippine benefits programs in fiscal year 1979. Both the VA and the Department of State appear to be receptive to revamping parts of the program and phasing out others over time.

This mood of cooperation should be a signal to the Congress that the time is ripe to act and correct the abuses in our benefit program carried out in the Republic of the Philippines.

SENATOR HATCH EXPOSES THE KEYNESIANS

Mr. HELMS. Mr. President, the able Senator from Utah (Mr. HATCH) has already proved himself to be a thoughtful spokesman in defense of limited government and a free economy.

For too long the apostles of John Maynard Keynes have ruled the roost in Washington. Under the politically attractive but wrongheaded theories of Lord Keynes, too many politicians have come to the conclusion that it is healthy for our economy to be subjected to massive doses of demand stimulus. That fancy term is nothing more than pumping more dollars in the economy than there are goods to purchase.

According to the Keynesians, these extra dollars are supposed to lead to greater levels of economic activity. In fact, however, it is demonstrable that Keynesian demand stimulus indeed can lead to short periods of increased economic activity—but always followed by inflation and unemployment.

Another way to look at Keynesian economic manipulation is that it is really an allocation of resources outside of the marketplace. During inflationary periods certain industries do better than others merely because of the economic environment. Certain kinds of employment are favored and certain kinds of investment are made. The long-range cost of these misallocations of resources is immense and the entire economy suffers.

Recently Senator Hatch authored an article which appeared in the National Review magazine. His statement entitled "More Appropriations—More Unemployment" points out how Keynesian remedies tend to be counterproductive.

Senator HATCH also has written a recent article in the New York Times which documented another example of the bad effects that result from Government intervention.

Mr. President, so that the Members of the Senate may have the benefit of these important observations, I ask unanimous consent that the two articles authored by Senator HATCH be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From National Review, Aug. 19, 1977]

MORE APPROPRIATIONS—MORE UNEMPLOYMENT

(By Orrin G. Hatch)

The Economic Stimulus Appropriations Act of 1977 is said to be a stimulus package. But is it? How do we know that it is not the opposite?

What are the assumptions underlying the view that this package is stimulative? I want first to point them out and then to examine each one.

First, there is the assumption of involuntarily idle manpower due to insufficient spending—idle manpower looking in vain for job vacancies. Second, there is the assumption of idle capacity due to insufficient spending—idle factories waiting in vain for customers. Third, there is the assumption of idle money languishing in bank vaults. And fourth, there is the assumption that it is up to the Federal Government to bring the idle manpower, the idle factory capacity, and the idle money together in the production of valuable public programs such as federal paychecks for firemen in Boston and sanitation workers in New York City, new city halls, monuments, and other equally unproductive construction projects everywhere—federal money for everything, in fact, except water projects in the Western states.

One hundred per cent federal funding for local public works projects means that projects that localities do not value sufficiently to undertake if they must pay any portion of the cost themselves. In other cases—such as the federal paychecks for Boston firemen—federal money is simply substituted for local money to finance jobs that will be there anyway. And there is another substitution effect as well: people employed in the government sector cannot simultaneously be employed in the private sector in the production of the goods and services that make up our real standard of living.

THE WHYS OF IDLENESS

Let's examine the matter of idle manpower. With more people employed than ever before, and with a higher percentage of the population employed than ever before, we are told that we have idle manpower.

Well, we do. There are some two million people looking for jobs that suit them, instead of suiting themselves to the jobs that are looking for people. There are another million or so young people who are kept from working—and therefore from acquiring job training and job experience—by federal red tape and the minimum wage law. Add another million who prefer the combination of leisure and untaxed unemployment compensation benefits to a paycheck that is shrunken by taxes. Taxes now total about 30 per cent of an average worker's pay and often leave only a small difference between his take-home pay and the local level of unemployment benefits. Add another million because the after-tax rate of return on business investment is not high enough to justify the capital spending that would employ them. If we add up these numbers, we have most of our idle manpower.

This brings us to the matter of idle capacity. Is capacity idle because of insufficient spending or because it is unprofitable to use the capacity regardless of the level of spending? If it is idle because it is unprofitable, then more spending will not necessarily make it any less idle. It could, in fact, result in more idle capacity. Let me explain.

Capacity may be unprofitable because it is outmoded, either in terms of today's cost and price structure or in terms of the latest technology. The rate of return that it generates may not be sufficient to justify its operation. For example, EPA and OSHA regulations and the rapid rise in energy costs have made some existing capacity unprofitable to use. What this means is that we have some idle physical plant that is counted as capacity because it physically exists. However, economically speaking, it does not exist. It is not idle capacity but abandoned capacity. Therefore, we may be closer to full capacity in an economic sense than the capacity-utilization rates show.

If capacity is idle because it is unprofitable, how will spending more make it more profitable? It can do so only if the increased spending causes an inflation that drives up the price of the products that can be produced by reactivating the idle capacity by more than it drives up the wages and other costs of making the products.

Even if inflation were to work in this way, it has other effects that increase the corporate sector's taxes relative to the corporate sector's profits. U.S. Department of Commerce data clearly indicate that this is what has been happening during the past several years: The inflation has raised the effective tax rate on corporate income above the statutory rate. This is because inflation overstates profits by understating depreciation costs and by causing the firm's accounting practices to register inventory profits erroneously by neglecting the replacement costs of the inventory. The following table shows the consequences of inflation for the effective tax rate on corporate profits.

[In percent]

Year	Inflation rate (CPI)	Effective tax rate [1]
1968	4.7	46
1969	6.1	49
1970	5.5	51
1971	3.4	49
1972	3.4	45
1973	8.8	49
1974	12.2	62
1975	7.0	54
1976	4.8	55

[1] Tax liability as a percentage of corporate profits with inventory valuation and capital consumption adjustments.

Since inflation raises the effective tax rates, it reduces the profitability of business. Because of illusions generated by its accounting practices and Internal Revenue Service requirements, business does not always perceive this instantly. However, there is no getting around the fact that you cannot generate more business activity by making it less profitable. If inflation made for higher profits, the double-digit inflation of 1974 would have produced prosperity in 1975 and not a sharp recession. We notice today that economic activity has picked up only with the decline in the inflation rate.

As for the matter of idle money, it is not the nature of profit-oriented bankers and businessmen to leave money lying idle. The question is not whether the nation's savings are being used, but how they are being used. Some $250 billion of the nation's savings have gone into Treasury notes and bills to fund the federal debt that we have produced in the last seven years. That is $250 billion that did not go into expanding the nation's productive capacity. Some of the nation's savings have gone into loans to real estate investment trusts, tax shelters, and tax avoidance projects. And some of the nation's savings have gone into loans to Third World and Communist countries. We have driven the money over there by making it unprofitable for American business to use American savings. The more we spend and inflate and drive up the effective tax rates and pile on higher and higher costs of regulation and pass measures of fiscal vandalism like this so-called Stimulus Appropriations Act, the more our savings will be misused and misallocated.

We have lowered the rate of return to sound businesses, small and large, which would otherwise be seeking to borrow in order to expand. We have increased the tax burden on responsible workers, on potential investors and home-buyers, by inflating their incomes into higher tax brackets, while threatening their jobs with red tape. People are increasingly uncertain of their property rights, and they are cautious about investing in additional property. No wonder banks have taken to lending more to high-risk people. No wonder we are lending more but getting less growth and employment from it. No wonder we are lending abroad instead of helping our country to grow.

It is time to create good lending prospects here in the U.S. by cutting tax rates. Banks will not make unsound loans abroad if they can make profitable loans at home. The way to get the economy moving is to make it profitable to work, hire, and invest by cutting taxes on work, employment, and investment.

It is time for the Congress to stop encouraging Americans to come to Washington for licenses to pick one another's pockets. We should cut tax rates to encourage them to stay at home and use their own resources to solve their own problems. The way we are going, we are making political activity more profitable than economic activity, and soon there will not be anyone left doing the work it takes to keep anyone's pockets filled.

GRIP OF THE LONG-DEAD

The resources used by the public sector cannot simultaneously be used by the private sector, where production takes place. Government borrowing to increase consumption does not have the same economic effect as business borrowing to increase investment. If we continue to increase the government's claims on resources relative to the private sector's, we will continue to cripple supply. Today, government takes about 40 per cent of the goods and services produced, but produces few, if any, of these goods and services.

John Maynard Keynes said that most politicians are unknowningly in the grip of defunct theories of long-dead economists. Well, most politicians in Washington are in the grip of Keynes's theories of creating employment through deficit spending intended to increase demand. Keynes is a long-dead economist. If Washington does not get free of his grip and focus instead on supply—by making it pay to invest, to hire, and to work—the American economy will be dead too.

[The New York Times, Aug. 25, 1977]

SINKING BUREAUCRATIC HOOKS INTO THE PUBLIC

(By Crrin G. Hatch)

WASHINGTON—Water, a commodity typically in great abundance, is suddenly scarce in the Western United States. Public officials have used the drought to impose more regulations and controls on the lives of many Americans. Indeed, what is taking place in the San Francisco area may foreshadow a future of growing bureaucratic control over all Americans, especially those who live in the West.

Accordingly to bureaucratic calculations, a 25 percent reduction in water consumption would provide the San Francisco area with sufficient water to endure a third successive year of drought. To compensate for the revenue effects of a 25 percent reduction in water sales, the city's Public Utilities Commission granted a 43 percent rate increase. But things have not gone according to plan. Customers reduced consumption by 40 percent. This caused a new problem.

The general manager of the San Francisco water department warned that he would have to seek a further rate increase of 22 percent if the reduction remained significantly higher than 25 percent. He suggested that customers devote more water to improved sanitary standards and landscaping irrigation.

We can all imagine how the manager's suggestion that Californians consume more water at lower rates rather than less water at higher rates fared when it encountered the moralitic attitude that wasteful Americans must now be made to suffer. There were instant calls for his resignation.

A spokesman for the State of California's Department of Water Resources complained that the city's water officials were being influenced by such minor matters as finances. The Public Utilities Commission denounced the suggestion to use more water to avoid a rate increase. The bureaucrat's attitude is that people must have less even if they must pay more to have less.

The politicians and bureaucrats have greatly compounded a problem of nature, which even 40 days and 40 nights of rain may never set right, because they have a vested interest in compounded problems. These regulators of the public interest, in the righteous tone of moral authority, now tell Californians how much water they must use.

The people are hit with price increases if they "over-use" and price increases if they "under-use." Only omniscient bureaucrats—like those who planned a 25 percent reduction and achieved instead a 40 percent re-

duction—can decide how much water can be used, even if there is more available to use. Californians now wonder if there really was a shortage of water or just an excess of politicians and bureaucrats.

This is a funny story of bureaucratic bungling, but it is also a scary story of power-grabbing. One group of consultants has suggested that a potential California water shortage in 1986 might require mandatory controls now. The new class has gone beyond turning crises to their advantage; they have gone beyond even creating crises for their advantage. Now they advocate controls on the basis of anticipated crises in the future.

This scary, funny story is a harbinger of what is to come when the Government imposes gasoline rationing. To compensate the sellers, which may be the Government itself, for lower revenues as a result of the mandatory reduction in gasoline usage, the Government will grant a price increase. As a result, people will further cut back on their gasoline use. The bureaucrats will then order the people to stop saving so much gasoline or else face a further price increase.

Whenever Government takes control over the allocation of a resource, people have to pay much more for much less. That is the bureaucratic way. When private companies raise prices, the cry goes forth that they are ripping off the consumer. When bureaucrats raise prices, it is justified on the grounds of dealing with a crisis or punishing immoral consumers for using either too much or too little.

This scary, funny story also throws light on why, when water becomes scarce in the Western United States, the Administration responds by canceling water projects in the Western states. This insures a crisis that Government can use to take control over water and, thereby, over jobs and people's lives.

The self-interest of Government is a powerful force. It even harnesses nature to its purposes. Mere mortals have no chance at all until they learn that governments manufacture crises in order to gain control over people.

PERFORMANCE OF THE ECONOMY IN THE LONG TERM

Mr. BENTSEN. Mr. President, the signals emanating from the American economy are mixed and confusing. A qualified econometric soothsayer reading the tea leaves of current economic indicators could make a convincing case for almost any hypothesis. A pessimistic analyst could, for example, cite the following considerations:

The Nation's equity markets are sluggish and bearish. If it is true that the condition of the stock market predicts the future course of the economy, we could well be in trouble. In the interest of accuracy, however, it should be noted that the stock market has predicted 6 of our last 10 recessions.

For the past 3 months the Commerce Department's index of leading indicators has declined by 0.2 percent. This is the first time the indicators have fallen 3 months in a row since the 1973–75 recession.

New factory orders fell by 3 percent in August, the steepest decline since December 1974.

Finally, the most discouraging economic news is the August increase in unemployment to 7.1 percent, with the rate for women and minorities well above 10 percent.

This data could, and should, be countered with mention of positive developments in our economy:

A recent survey of the 1,000 largest manufacturing firms found that capital appropriations rose about 4 percent between the first and second quarters of 1977, the second largest quarterly increase in history.

The rate of increase in wholesale prices has slowed measurably, down to an annual rate of only 1.2 percent in August.

The state of the economy, Mr. President, is clearly uncertain. Since the Budget Committee's recommendations included in the second concurrent budget resolution flow directly from the committee's assessment of the current and future levels of economic activity, I believe the Senate should take this opportunity to discuss what can be done to move our economy toward full employment and price stability.

We are limited in our ability to affect the short-term course of the economy, just as we are limited in our ability to board a moving train. By the time we have established a clear pattern of economic activity and developed a consensus on the appropriate policy approach, the pattern of economic activity may have changed fundamentally; we have missed the train. Our strategy is outdated or irrelevant.

Let us, Mr. President, take a step back from confusion. Instead of concentrating on the short-term indicators, perhaps we would be well advised to examine the long-term trends in the economy and attemp to devise policies to improve its general level of performance. I am not optimistic about our ability to fine-tune the American economy month to month, but I am convinced that we possess the knowledge and ability to identify and correct factors that inhibit long-term growth while we eliminate bottlenecks that inhibit the future potential of our economy.

In recent years the performance of the American economy has been less than satisfactory. Far less than satisfactory. Per capita economic growth in this country since 1960 has been the lowest of any major Western industrial power. This does not bode well for the future.

Between 1960 and 1973, real output per employed person increased by an average of only 2.1 percent in the United States. Even the United Kingdom, beset with obvious economic difficulties, surpassed that figure, with output increasing at an average rate of 2.8 percent. At first glance the difference may seem insignificant, but when projected over a thirteen year period it means that real output per employed person increased 31 percent in the United States and 43 percent in the United Kingdom. Since 1974 the growth rate has slowed to 1 percent in both countries, so the difference remains.

It is no great problem to identify the underlying reason for the unsatisfactory long-term performance of the American economy. The answer lies in capital formation. Between 1960 and 1973 the United States allocated a smaller fraction of its GNP to capital formation than any other major Western democracy. During this period, total fixed investment in the United States was 17.5 percent of real output; in Canada it was 22 percent; in France and Germany it was 25 percent; and in Japan it was 35 percent.

As pointed out by the economist David Meiselman, the sharp increase in our labor force in recent years has simply not been matched by equivalent increases in the rate of capital accumulation. For instance, in terms of real 1958 dollars, the gross stocks of business capital increased by $55,000 per each new worker entering the labor force between 1961 and 1965. This figure fell to $46,000 for the 1966–1970 period, and was reduced to $41,000 between 1971–1974.

The ratio of the stock of capital per worker is a crucial element in determining the productivity of each worker. When the stock of capital increases at a slower rate than growth in the labor force, productivity per worker will eventually decline. Unit cost per worker will increase. Real wages will fall, and employment opportunities will evaporate.

In light of the data I have mentioned, it is not hard to understand the disappointing performance of the American economy over the past 15 years. How can we do better in the coming decade? How can we exert a positive, long-term influence on the economy of this Nation?

First, we must encourage the average American to save more, for it is the savings of the American wage earner that provides the funds business requires to expand the Nation's stock of capital. There is a direct, obvious relationship between savings and capital, and it is a lack of capital that is inhibiting the performance of our economy.

The current tax code contains a considerable bias against savings, while encouraging consumption. Income spent on consumption is taxed only once, when it is earned. Income placed in a savings account or used to purchase stock is doubly taxed: when it is earned, and when it accrues dividends or interest. Prof. Michael Boskin of Stanford University estimates that the bias against savings inherent in our tax code lowers the capital/labor ratio by 30 to 40 percent in the economy.

Given our evident problems with capital formation, we can no longer afford to penalize thrift. We must find ways to help people save more during their high earning years.

I am distressed when I hear proposals to accentuate the bias against savings by raising the tax individuals must pay on—so-called—capital gains income. Capital gains is not a dirty word. It is not unearned income. It is income earned from savings. Income earned from building the stock of capital that makes this country prosper.

To further tax capital gains will weaken our economy over the long run by reducing the rate of capital accumulation. No amount of short-term dickering with fiscal and/or monetary policy can offset the long-term adverse impact of capital shortages. To ignore the problem of capital formation is to condemn the American economy to mediocrity and stagnation.

We cannot rejuvenate our economy in the coming decade until we are willing to confront and overcome the problem of structural unemployment. Every citizen of this country should have a stake in our free enterprise system. Every citizen of this country should have an opportunity to make a productive, constructive contribution to our society. We cannot abide a situation in which vast segments of our population are effectively excluded from the mainstream of our economic life.

In August of this year, unemployment among black teenagers was over 40 percent. This staggering rate of unemployment breeds crime which costs us billions of dollars. More importantly, it breeds despair and frustration. It is a shameful waste of valuable human resources in an era of human rights. It is degrading and debilitating. It is a situation which cannot be permitted to continue. The human and economic price of structural unemployment is frightening.

We can, and we must, create employment opportunities for millions of low-skilled, chronically unemployed Americans. There are few items with a higher priority on our economic agenda for the future. In addressing the chronic problem of structural unemployment, we must be willing to try new ideas and test out innovative concepts.

One such approach is the employment tax credit, recently passed by the Congress and signed into law by the President. I was a sponsor of the employment tax credit because I believe that employers should be accorded incentives, in the form of tax credits, to motivate them to hire low-skilled workers. The ETC is a new approach to an old problem, but it will work if it is given the proper publicity and support. It has worked in Europe and there is no reason why it should be any less successful in this country.

A job is vital fact of life to every American citizen. It is a prerequisite to a decent, productive existence in our society. We have an obligation, an economic, moral, and humanitarian obligation, to foster opportunities for employment, in the private sector if possible and in the Government sector if necessary. For it is surely better to pay people to work than to pay them to do nothing.

Finally, Mr. President, any long-term overview of the problems and potential of our economic system must give careful consideration to the situation of small business.

Americans too often forget the indispensable role of small business in promoting healthy competition in our economy, creating jobs for a growing work force and developing innovative ideas and products. Small business, in many ways, is the essence of our country's promise.

The growth of small business has been good for the millions of individual Americans who have succeeded with their own business. It has been good for our economy and for the country at large. This great diversity of ownership has spurred competition and innovation, it has created employment, and has brought forth a wide variety of goods and services, and helped bring strength and resilience to our free enterprise system.

However, the statistics show that from 1948 to 1972 the number of self-employed businessmen in this country declined from 10.7 million to 7.1 million, even though the labor force grew from 60 million to 86 million. In 1960 small and medium sized manufacturing corporations held 50 percent of this country's manufacturing assets and 41 percent of the profits. But, by 1972 this had declined to 30 percent of the assets and only 28 percent of the profits.

Our tax laws and tax forms must be substantially simplified for smaller enterprises. Small businesses, especially "mom and pop" operations, must fill out numerous reports which can amount to as many as 52 tax forms in a single year. Small businessmen lack the money to hire sophisticated tax lawyers and accountants and are simply unable to take full advantage of many existing tax provisions. We must enable smaller firms to utilize existing tax incentives to the same extent as larger firms.

Mr. President, by highlighting three items of long-term significance to our economy—capital formation, structural unemployment, and the role of small business—I am suggesting that Congress might do well to concentrate on structural weaknesses in the American economic system rather than focusing on short-term indicators where our potential for influence is minimal. Obviously, I do not have a prescription to cure all that ails the American economy.

I would, however, suggest that we may be preoccupied with the symptoms of our problems while overlooking the root causes of the affliction. To the extent that we are able to deal effectively with items such as capital formation, structural unemployment, and small business we shall inevitably see an improvement in the short-term indicators that are currently the cause of so much concern and confusion.

EFFECT OF OIL PRICE INCREASE ON WORLD TRADE

Mr. JAVITS. Mr. President, I have been particularly concerned in recent months about the effect of the dramatic oil price increases of 1973 and 1974 taken by the OPEC countries on not only the American economy but on the proper functioning of the international economic system. My recent testimony before the Senate Banking Committee underscored my concern that the world is facing the danger of a severe economic depression unless economic and political measures are taken quickly to shore up the structure of the international economic system.

Barbara and Ray Howard, in an article entitled "Oil's Newest Inflationary Bite," which appeared in the New York Daily News of August 30, 1977, describe in the clearest terms not only the direct, but also the indirect effect, of the high oil prices on the U.S. economy.

The Howards indicate that the annual growth in free-world trade slowed from an average of 9 percent during the 1950's and 1960's to less than 7 percent at present. Without oil, real growth in world trade is now only about 4 percent per year. This critical impact of the oil price increase on world trade is especially troublesome because, without growing trade, the nonoil producing countries of the world will not be able to pay for their staggering oil import bills. Rather than freeing trade, the major countries are beginning to take protectionist measures to limit imports into their countries, which can quickly lead to "beggar my neighbor" policies, which is a prelude to economic disaster.

Although increased amounts of capital will continue to be needed to help the nonoil producing developing countries meet their balance of payments needs, these countries require increased trade opportunities which can only be generated by a strong world economy, unfettered by discriminatory trade and investment barriers.

Mr. President, I commend this article to the attention of my colleagues and request unanimous consent that the text be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Daily News, Aug. 30, 1977]

OIL'S NEWEST INFLATIONARY BITE

(By Barbara and Ray Howard

Rising oil prices are going to begin to bite into your pocketbook in a strange new political way. You have already experienced some of the direct and indirect economic effects of high oil prices. The oil price run-up has provided a price umbrella for coal, gas and other energy forms. You see the direct economic effects of high oil prices at the gas pump and in your heating bills.

But the indirect economic effects hurt just as much, because everything from electricity to food to steel is made from oil and other energies. And as energy prices rise, so do the prices of all things derived from energy.

The economic effects are bad enough, but now we face new inflationary pressures caused by the political effects of rising oil prices. Nations all over the world have seen their oil imports go up. Most countries are sending a hemorrhage of cash to the Middle East. As a result, most nations see their imports running way ahead of exports, draining their cash reserves. To check this drain, governments are increasingly acting to restrict imports of other products.

Yet free-world trade is considered one of the great forces that kept consumer prices down during the healthy 1950s and 1960s. Growing at a rate of 9 percent per year, world trade assured us that we could buy products from the lowest-cost producers and most efficient users of resources. Free world trade encouraged the consumer to reward the efficient producer and penalize the high-cost producer, thus keeping prices down.

But now the growth in world trade is slowing. Currently it is running at less than 7 percent above last year. If we strip oil from the statistics, real growth is only about 4 percent per year. The use of import charges, trade-limiting agreements, quotas and other inflationary devices are growing. Europe restricts textile imports. Japan discourages silk imports. Indonesia slows steel imports. Jamaica bans all luxury consumer goods including automobiles! The U.S. limits the import of color television sets and specialty steel.

Oil is also fueling domestic political forces by slowing down the recovery. Economies that grew on the back of cheap energy are not rebounding as vigorously in an era of expensive energy. Slow worldwide recovery

means high jobless rates, which lead to the politics of "protecting jobs against imports."

In the U.S., oil's dramatic political effects have created an unusual alliance of labor and business, with both going to Washington demanding protections from low-cost foreign imports in everything from steel to shoes. Similar labor-management alliances are at work in Britain, France, West Germany and other Common Market countries.

By putting tremendous political pressure on cash reserves and jobs, oil is pushing the world toward increasing trade restrictions. As that happens, trade will fall off. Inefficient producers will be protected and kept in business. Efficient producers will be penalized. The result will be lesser quality products at higher prices.

You will buy less with your paycheck and business volume will fall off, propelling us back into recession. Oil's political effects will tend to make labor and management increasingly nervous and shortsighted. It will be up to the consumer to remain farsighted and objective enough to fight for the lower prices unrestricted world trade brings.

It's your pocketbook. If you don't protect it, nobody else will.

NOW ACCOUNTS AND S. 2055 ARE NOT IN THE BEST INTEREST OF THE CONSUMING PUBLIC

Mr. MORGAN. S. 2055 as reported out by the Banking Committee will allow commercial banks, savings and loans, credit unions, and mutual savings banks to offer third party payment accounts and the payment of interest on these accounts. This simply means that the customer will now be allowed to collect interest on his or her savings account and at the same time write checks or negotiable orders or withdrawal on the accounts. These NOW accounts, as they have been labeled, have been characterized by proponents of the legislation as consumer oriented, but it is my opinion, and I have statistics to bear me out, that only a small minority of the consuming public will benefit by the enactment of this legislation.

NOW accounts are a phenomena which originated in the New England States of Massachusetts and New Hampshire as part of the state banking system. In order to allow federally chartered institutions in these States to effectively compete against their counterparts in the state banking system, the Congress enacted legislation to allow federally chartered institutions in these States to also offer these accounts. Over the years, the Congress has extended this authority to other States where necessary in order to equalize competition between the State and federally chartered institutions.

Now, however, the proponents of this bill are asking the Congress to go much further and extend these accounts throughout the Nation although such a move is unwarranted to maintain equality of service among competing institutions. And I ask you, my colleagues, to talk with representatives of financial institutions in your States and I am confident that the overwhelming response will be that they have no desire whatsoever to offer these NOW accounts.

During the markup on this bill, I talked with the President of one of the largest banks in my State and one of the top 50 banks in the Nation and he told me:

I don't care what you do, Robert, we're going to earn a fair return on our investment and the consumer is eventually going to pay for it. If you want to make us pay interest on checking accounts, sure, we'll pay it, but we're going to add it in costs somewhere else.

And I have talked with representatives of the savings and loan industry both in my home State and throughout the Nation and these people tell me that savings and loans are not interested in getting into the checking account business. They see their function as providing a ready credit market for the homebuying consumer and they are trained and dedicated to carry out this mission.

I am a member of the board of directors of a savings and loan which I started in my home town of Lillington and I have witnessed the beneficial effects of this institution on the homebuilding industry in my county. I cannot help but feel that by continually eliminating the differences between commercial banks and thrift institutions—and this bill is a significant step in that direction—that the ultimate victim will be the homebuyer and consumer.

Savings and loans are created for the specific purpose of financing homes and it is my fervent belief that these institutions do not need these additional services in order to continue to attract a free flow of funds into the mortgage market pool. Talk with your savings and loan representatives and they will tell you that this has been a record year for attracting funds into their institutions and they have done so without the benefit of these so-called NOW accounts which are going to end up costing the institutions which elect to offer them.

Savings and loans are able to attract these funds because of regulation Q which allows thrift institutions to pay one-fourth of 1 percent more interest on their passbook savings than are commercial banks and this issue of regulation Q is intricately woven into this bill. As I stated during markup of the bill, if savings and loans are going to act like commercial banks, and I certainly hope that they do not choose that alternative, then I feel that we should eliminate the differential—regulation Q—for those institutions making that election in order that commercial banks will not be put in a competitive disadvantage. To do otherwise, would allow savings and loans to offer the majority of the services now offered by commercial banks while still allowing them the distinct advantage of paying one-quarter of 1 percent more interest on their savings accounts. And let me assure you that the savings and loan folks are adamant about maintaining the differential.

But let us now address the question of costs and who will benefit by this "consumer-oriented" legislation.

If Congress decides that NOW accounts should be offered on a nationwide basis and financial institutions are forced to pay interest on checking accounts, then the financial institutions will have to make up this loss of revenue by charging for services elsewhere. Financial institutions operate to make a profit, as well they should, and their investors will not allow a continual drain of their profits caused by the implementation of this bill; they will demand that these additional costs be passed on to the consumer either in explicit charges for services offered or in higher interest rates on their consumer loans.

If Congress decides that an explicit charge for all services offered by financial institutions is a better system than that offered today where account holders are often subsidized in the form of free checking and other services, then fine and good; but let us not kid ouselves by claiming that the average consumer is going to benefit by the implementation of NOW accounts. That simply is not the case. While the wealthy depositor with a large balance who writes few checks may benefit, the poor widow existing on social security will end up having to pay for banking services which heretofore have been free or at minimal cost.

Security Pacific National Bank, the second largest branching bank system in the country has done a study showing the effect of implementation of NOW accounts on its customers and the results are exactly as I expected:

Our study indicates that the only possible winners among our customers will be those who maintain relatively high balances and have relatively few account transactions. Our study shows that the breakeven balance would have to be $900+—a figure which excludes about three-fourths of our household accounts. The biggest losers would be the low and medium income earners who maintain low average balances and write an average number of checks.

Consumer legislation—not in a million years.

Another group that will suffer as a result of the adoption of this legislation is the American taxpayer for the committee has seen fit to attach a provision providing for the payment of interest on reserve requirements to the bill at an estimated cost to the taxpayer by 1981 of $300 million. That is right; $300 million of the taxpayer's money which will be coming out of the Treasury to help defray the cost of the implementation of this legislation.

But yet we are told that we must have this provision if we wish to avert a substantial erosion of Federal Reserve membership as banks throughout the nation seek ways to reduce operating costs as they are forced to pay the additional costs of offering NOW accounts. And I might add at this point that it will probably be the small banks which are affected the most, for it is these smaller institutions where the profit margin hangs on a narrow thread—a thread which could easily be broken by the increased costs of NOW account services.

In summary, then, who gains from these NOW accounts? The wealthy person writing few checks and maintaining a significant balance in his checking accounts.

Is this the average consumer we seek to protect?

And who loses if this consumer legislation passes? The average person who maintains a relatively small checking ac-

count balance who writes a great number of checks; the taxpayer who must subsidize this costly experiment; and the small banker who may very well be forced out of existence by the good intentions of a few well meaning New Englanders who decide that what is good for New England must be good for the rest of the country. Well, gentlemen, that is not necessarily so.

Mr. President, I ask unanimous consent that a letter on this subject from Richard F. McAdoo, vice president, Security Pacific National Bank, a California banking institution, to Senator PROXMIRE, the chairman of the Committee on Banking, Housing, and Urban Affairs, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SECURITY PACIFIC NATIONAL BANK,
Washington, D.C., August 2, 1977.

Hon. WILLIAM PROXMIRE,
Chairman, Committee on Banking, Housing and Urban Affairs, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: During the course of today's committee consideration of S. 1873, several Senators asked for information on the possible impact of interest bearing transaction accounts on consumers. This question occurred to us several weeks ago and, as a result, we analyzed our personal demand account base to determine which consumer groupings were likely to incur added costs as a result of introducing NOW accounts on a national basis.

As you may know, Security Pacific is the second largest branch banking system in the country with 540 banking offices in California and assets exceeding $16 billion. Because we are a consumer oriented bank, we believe our analysis may provide some insight into the possible impact of NOW accounts on the average consumer.

In terms of which depositor groupings would make or lose money, the graph attached as Exhibit II illustrates this quite clearly. The probable gain or loss for our customers is shown for interest ranging from 1 percent to 5 percent. The assumption used for cost recovery indicates a transaction charge of 4¢ would be required to recover the added cost of every one percent in interest paid on the accounts. Our study indicates that the only possible winners among our customers will be those who maintain relatively high balances and have relatively few account transactions. Our study shows that the break-even balance would have to be $900-plus—a figure which excludes about three-fourths of our household accounts. The biggest losers would be the low and medium income earners who maintain low average balances and write an average number of checks.

We believe that the point is that while NOW accounts are being sold as a boon to the average consumer, the analysis of our own customer base does not support that premise. The only way the "average" consumer can benefit from the unbundling of bank services is to maintain a rather high balance and write few checks. While there may be very good economic and practical arguments for paying explicit interest on transaction accounts. we believe that to promote the concept as being of benefit to the average household is disingenious at best. Our study shows no such benefit.

The Fed staff has estimated that the present implicit return to depositors on underpriced bank services is about 5% on an aggregate basis. However, the distribution of this implicit return is very uneven and tends to heavily favor or subsidize the smaller depositor. It seems to us that payment of explicit interest will tend to result in a system of payments which is more in proportion to the size of the account balance.

Therefore, what the Fed believes to be a more equitable system of paying interest—whatever its final form—would probably result in higher charges or a reduced return for the bulk of depositors holding small bank accounts. In our case that would mean 76% of our household account holders. Of course these customers could reduce their check-writing thus reducing costs. However, giving up a service one formerly had is not the usual definition of being "better off." The other alternative for this group of consumers would be to increase the size of the account balance to offset the higher charges with the interest payment. This would, of course, mean foregoing consumption and/or taking money from possibly higher yielding investments for the sole purpose of maintaining the same level of service.

Our analysis establishes the simple fact that any return paid on the basis of asset holdings will accrue to those who hold the assets. The present system is only peripherally based on account size which benefits the smaller depositor. In our opinion this small depositor will be worse off under a system of explicit interest than under the present system.

I have also enclosed a copy of our position statement on S. 1873 which may be of interest to you or your staff. Since many members of the committee expressed an interest about this point, a copy of this letter and the attachments have been sent to all members of the committee.

Cordially yours,
RICHARD F. MCADOO,
Vice President—Government Relations.

[DISCUSSION PAPER]

NOW ACCOUNT "WINNERS" AND "LOSERS"

The purpose of this paper is to attempt briefly to explore the question as to which segments of consumers are likely to benefit (the "winners") and which segments of consumers are likely to incur added costs (the "losers") as a result of the introduction of NOW accounts on a nationwide basis. We will attempt to focus our discussion, as much as possible, on the effects on consumers, rather than on the impacts on banks, other businesses, or governmental bodies.

There are limitations imposed on the accuracy of our results simply because we must make a fairly simplistic set of assumptions regarding the pricing of NOW's on which to base our analysis. In reality, there are myriad ways in which this service can be priced by the marketplace, but logic indicates that the end result will be something similar in its effects to what we will arrive at here.

First, let's briefly review the present situation, with respect to personal checking accounts. What we have now, is a prohibition against any explicit payment of interest on demand balances, so the customer is compensated for the use of his funds by an implicit return to him in the form of free services or services which are priced below the real cost of providing them. The Federal Reserve staff has estimated that, in the aggregate, individuals are currently receiving services equal in value to a return of about five percent on their balances. Aggregation, however, conceals the fact that this distribution is very uneven, and for those holding very small balances and writing an average number of checks the return is really very much higher. Conversely, for those with large balances and average check-writing habits the return may be almost negligible. Clearly, the larger accounts are subsidizing the smaller ones.

The basic assumptions on which our analysis rests are as follows:

Ownership of NOW accounts will be confined to individuals

Commercial banks are obliged to make every effort to maintain their profitability

Our own retail customer population in terms of account size distribution is a reasonable reflection of the customer configuration of any bank with a substantial retail orientation

Most households write about 20 checks per month regardless of account size, income level, or other demographics

NOW account customers will write about this same number of checks

The costs of paying interest on NOW account balances will be recovered through service charges for payment services

This last assumption is made for the sake of simplicity, and whether or not it works out to be strictly true, the end results should be similar in effect. These costs must be borne somewhere, and any system of more explicit pricing will dictate more equitable returns to the holders of large balances and more realistic charges to the users of transaction services.

Looking at the personal demand account customer base, we find the following approximate distribution of numbers of account holders by average account size and the percentage of total personal demand deposits account for by each size class:

EXHIBIT 1.—*Distribution of personal demand accounts*

Average demand account balance	As a percent of all accounts		As a percent of dollars of deposits	
	Percent	Accumulated percent	Percent	Accumulated percent
1– 100	16	16	1	1
101– 200	14	30	2	3
201– 300	12	42	3	6
301– 400	10	52	3	9
401– 500	7	59	3	12
501– 1,000	19	78	15	27
1,001– 5,000	19	97	40	67
5.001–10,000	2	99	13	80
10.001–20,000	0.6	99.6	9	89
20,000+	0.4	100	11	100

Let's make some observations from Exhibit I on the basis of only a partial redistribution of costs and charges—that part precipitated by the payment of NOW interest. That is, let us assume that the present pricing structure remains in place as a floor under any changes. Remember that, under this present system, the larger accounts are subsidizing the smaller accounts by giving up a fair return on their funds to help keep the price of checking services low for households with very small balances. Therefore, this unfair distribution can continue, and we will examine only the effects of recovering the

costs of paying interest on NOW accounts, not the costs of providing transactions services.

With explicit pricing we will assume that these added costs, at least, must be distributed equally, so we will set the same incremental price for everyone. If the account size distribution shown above holds, and if traditional usage patterns remain unchanged, a transaction charge of 4 cents would be required to recover the added cost of every one percent of interest. This figure depends on these assumptions, which, of course, could change, so it is merely for purposes of illustration. The important point here is that there is clearly a cost—whatever the amount.

It can be seen that 78 percent of the accounts—those with less than $1,000 average balance—account for only about 27 percent of the dollar balances. At 4 cent per transaction for every one percent of interest and an average of 20 checks per month, a household would need an average balance throughout the year, of $960 in order to berak eevn. It can be seen that if the distribution in Exhibit I holds, about three-fourths of households would fall below the break even point.

Remember that this involves no departure from the present level of transaction charges, since this is an incremental approach. It follows that the holders of the higher-balance accounts would have more incentive to switch to an interest-bearing account for third-party payment services. If this sufficiently altered the customer mix for regular checking account services, it is possible that those charges would have to rise because it is this group that subsidizes those services.

Exhibit II shows the net effect, by account average balance, of the effects of paying interest on NOW accounts at various percentages, if our rather simplified set of assumptions applies. Regardless of whether our example is strictly correct, or whether there is a shift in the mix or a different method of pricing, we would expect the result to be roughly the same. The crux of the matter is that an interest payment is a return on an asset, and such a payment can only be made to those who hold assets. It is clear that the 20 to 25 percent of account holders with the higher balances will be the beneficiaries of interest-bearing transaction accounts.

CARGO PREFERENCE: THE FTC PREDICTS HEAVY CONSUMER LOSSES

Mr. GRIFFIN. Mr. President, 3 years ago this week, in remarks here in this Chamber, I charged that cargo preference legislation then pending before the Senate was a "rip-off" of American consumers to benefit special interest groups in the maritime industry.

Nothing has happened since to change my mind.

Indeed, expert economic analysts—including those in the Treasury Department and the General Accounting Office—have concluded in recent weeks that this year's version of cargo preference, so strongly supported by President Carter, would be enormously costly to our citizens.

Today I can report that yet another Government agency, the Federal Trade Commission, concurs on the adverse economic impact that would result from guaranteeing American ships the right to carry a minimum percentage of oil imported into this country.

At my request, the FTC has analyzed the cargo preference bill (H.R. 1037) that has been reported favorably by the House Committee on Merchant Marine. The FTC's report, completed yesterday, concluded that:

There is "practically no chance" that the cost to consumers will be below the range of $190 million to $290 million yearly estimated by the GAO and may in fact "be well above" that range.

Cargo preference is both a merchant marine subsidy and "a tax on U.S. consumers of oil" that could lead to higher prices for domestically produced energy as well as for imported fuel.

If the desired policy is to build a stronger merchant marine fleet, there are "less costly alternatives" to cargo preference and the "inefficient resource allocation" it represents.

Thus, the FTC's conclusions differ sharply from those of the administration, which estimates a yearly cost to American consumers of only $110 million—less than half the average $240 million projected by the GAO and endorsed by the FTC.

Mr. President, I believe these latest findings are of tremendous significance—both because the Federal Trade Commission is an independent agency and because more than any other agency, it is the Government's guardian of consumer interests.

At the very least, the FCC report underscores the urgent need for full, complete, and thorough public hearings on this issue in the Senate.

We need to know why the President—in the face of potentially severe economic and diplomatic consequences, in the face of consistent advice from his closest advisers to the contrary, and in the face of his own pledge at the economic summit in London last May to shun protectionism—is supporting cargo preference so strongly.

To date, we have heard testimony from only one witness—and that came at a hastily called rump session of the Commerce Committee, at which time the acting chairman indicated no further witnesses would be permitted.

What is being hidden here? The Senate deserves to know the full cargo preference story before being asked to saddle American consumers with hundreds of millions of dollars in higher energy costs that would benefit only a chosen few in the maritime industry.

This latest evidence—together with that already available—cannot and must not be ignored.

I wish to commend Chairman Pertschuk, the other members of the Commission, and the FTC staff for the prompt and objective economic analysis which they have provided on cargo preference legislation.

I ask unanimous consent that the Commission's letter to me be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEDERAL TRADE COMMISSION,
Washington, D.C., September 8, 1977.

Hon. ROBERT P. GRIFFIN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GRIFFIN: This is in response to your letter of August 5, 1977, concerning the proposed cargo preference legislation, H.R. 1037.

Your first question concerned the cost of the bill to consumers. Due to time limitations, the Commission has not attempted an independent estimate of this cost. Instead, the Commission's Bureau of Economics has analyzed various estimates submitted to Congress and, based on that appraisal, the Commission has concluded that the study by the General Accounting Office is a reasonable estimate of that cost.

GAO estimates that if the 9.5 percent cargo preference were fully implemented in 1985 as proposed, it would cost consumers about $240 million per year if imports are approximately 8 million barrels per day. We believe this to be a reliable estimate. Any estimate necessarily involves a number of assumptions about uncertain future developments, and GAO indicates that the cost might range from about $190 million to $290 million depending upon developments in the world tanker market. We believe that the assumptions employed by GAO result in a range of estimates which include the most probable eventualities. We note, however, that due to the nature of the uncertainties (such as a cargo preference possibly leading to an increase in the price of domestically produced energy) there is some chance that the cost will be well above the range. There is, however, practically no chance that the cost will be significantly lower.

To the extent that the goal of H.R. 1037 is to have a stronger or larger merchant marine fleet, the Commission believes that there may be less costly alternatives to H.R. 1037 which could achieve that goal. Cargo preference creates simultaneously a subsidy to the U.S. Merchant Marine industry and a tax on U.S. consumers of oil. Moreover, part of the cost to consumers would not be transferred to producers but would be lost to the economy because of the cost of administering the program and other forms of inefficient resource allocation. Direct subsidies to the merchant marine industry, such as those provided by the 1970 Merchant Marine Act, would be less expensive since much of the loss through inefficiency could be avoided.

If the goal of H.R. 1037 is to increase the fleet of U.S. flag ships, without necessarily increasing U.S. ship-building, then a program which simply encouraged transferring the registry of foreign registered ships would accomplish this goal. Given the apparent tanker glut in world markets, transfer of registry would accomplish the goal of a larger U.S. Merchant Marine fleet without incurring the capital costs of constructing U.S. tankers. The U.S. consumer would then only pay the operating cost differential (estimated by GAO to be 20 percent of the total differential) of U.S. flag ships. This would reduce the annual cost of a cargo preference requirement from $240 million to $48 million.

While changes in registry could be accomplished with an appropriately designed cargo preference bill, a direct subsidy would again be more efficient. Although allowing changes in registry would eliminate the capital costs of H.R. 1037, not all of the $48 million cost to consumers would be transferred to U.S. ship operators, again, because some would be lost to the economy through various types of inefficient resource allocation. Thus, a less costly proposal would be additional subsidies for ships registered in the U.S. engaged in international trade. These subsidies could be offered to U.S. flag ships regardless of the country of construction.

By direction of the Commission. Commissioner Dixon does not join in this letter, believing that the Commission lacks an ade-

quate basis for certain of the conclusions stated herein.

(Mr.) CAROL M. THOMAS,
Secretary.

THOMAS F. POLICASTRO: A DISTINGUISHED UNION LEADER

Mr. PELL. Mr. President, the working men and women of Rhode Island and union members throughout the United States lost a good and true friend in August with the death of Thomas F. Policastro.

Tom Policastro was a lifelong Rhode Islander and the first and only president of the Rhode Island AFL–CIO. He was first elected to that job in 1958 and served for 19 years the interest and concerns of his union members. He was also extremely active in the United Steelworkers and was most recently their COPE and legislative director for New England.

Tom was a good friend of mine, but he never hesitated to speak his mind to anyone. He was a tireless worker and eloquent spokesman for the rights of his brothers and sisters in the union movement. He was a tough bargainer and a skilled negotiator.

Tom's vision was very broad. He looked upon society as a whole, where one person's action affected everyone else. He knew that poverty could not be allowed to exist alongside affluence and that to diminish the rights or the quality of life of any individual led to the diminution of life for all.

Tom was persistent in looking for new ways to improve the quality of life for his union members and for all the citizens of Rhode Island. Although we talked of many subjects in the years I knew him, no subject better exemplified his concern for others than health care. He was convinced that the standard fee-for-service health care system did nothing to promote better health care or to make that care affordable to workers and their families. Determined to do something about that, Tom and a handful of associates began the Rhode Island Group Health Association, an HMO. Eventually RIGHA became the first HMO in the country certified under the Health Maintenance Organization Act, and Tom Policastro was its president as it grew to serve, at the time of his death, almost 25,000 Rhode Islanders, union and nonunion members alike.

In addition to his special interest in health care, Tom Policastro cared deeply about civil rights and was engaged in a strong advocacy effort for the equal rights amendment. He was a moving force behind ERA in Rhode Island and New England.

Tom Policastro's special brand of leading the fight for workers' rights and his honest and direct manner will be sorely missed, but he has left behind a real legacy, on the lawbooks, in contracts, in the factories, and at RIGHA. I extend my deepest personal sympathy to his bereaved family and ask unanimous consent that there be printed in the RECORD an article that appeared in the Providence Journal, a letter to the editor of the Journal, and a statement issued by the Rhode Island AFL–CIO.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

LABOR DAY, 1977: IN MEMORIAM THOMAS F. POLICASTRO, OCTOBER 22, 1919—AUGUST 11, 1977

On Thursday, August 11, 1977, Thomas F. Policastro passed away. During his adult life he was a devoted servant of working people, the unemployed, those discriminated against and persecuted, as well as those less fortunate than others. He was unselfish in sharing his varied talents with others who were striving to advance worthwhile humane causes.

From a humble beginning as the youngest of a large family, he went to work at an early age and quickly became a dedicated person pledged to seeking a vehicle that would improve the quality of life for those engaged in the industrial world of work.

He became an early activist in union affairs and rose to the presidency of his local union of the United Steelworkers of America. Subsequently he was appointed as a staff representative by the President of that International Union and he willingly accepted an increasing number of assignments that demanded his trust and responsibility. He became active in the Rhode Island CIO Council and in 1955 was elected president of that Council. In 1958, when the Rhode Island CIO and Rhode Island AFL merged, he was elected president and served in that capacity until his untimely death.

In addition to his Rhode Island union recognition, he was president of the New England AFL–CIO and played a prominent role as an advocate for the development of alternative sources of energy—development of New England transportation, and a closer working relationship between government, industry, and labor in New England for the common good. He was the founding president of the Rhode Island Group Health Association, chairman of the Rhode Island Consumers Council, vice president of the United Way of Southern New England—active in the Rhode Island Urban League, Histadrut, and many other worthwhile causes intended to make life better for others.

During the years Tom Policastro served working people, he never sought personal gain of wealth or power. During his lifetime he never accumulated material wealth for himself, but he leaves a rich legacy of substantial gains in social, economic, racial and humane causes. He was unselfish in sharing with others the satisfaction that his contribution to the common good was helping to obtain social and economic justice for those not in a position to accomplish the goals themselves. Tom Policastro displayed a combination of talents rarely found in today's society. He was dedicated to serve, he had integrity and the determination possessed by the pioneers of the labor movement.

Tom was not a conformist for the sake of conforming. He understood the principles of the labor movement and was loyal to the rules and policies promulgated by organized labor. If and when he had a contrasting point of view during the formation of rules or policy, he would freely and emphatically make his opinions known. However, once rules and policy were adopted, he abided by them faithfully—and expected all others to do likewise. He lost patience with those who publicly deviated from adopted policy or rules.

It was never his intention of becoming a candidate for the diplomatic corps or to win a popularity contest. His objective in life was to serve those who he was chosen to serve, and his contributions cannot be measured in tangible terms. His life was one of service above self, and, although not always pursuing a popular course, he won the respect of leaders of industry, government, and his contemporaries in the world of work.

With the passing of Tom Policastro, the workers have lost a faithful friend.

On Labor Day 1977, all working people mourn his passing. Therefore, in commemoration of the memory of Tom Policastro, the Rhode Island AFL–CIO dedicates Labor Day 1977 as a memorial to him.

RHODE ISLAND AFL–CIO.

THOMAS F. POLICASTRO, HEAD OF RHODE ISLAND AFL–CIO, DIES AT 57

CRANSTON.—Thomas F. Policastro, 57, of 53 Scotland Rd., the only president in the 19-year history of the Rhode Island AFL–CIO, died yesterday at the Summit Medical Center. He was the husband of Dorothy (Williams) Policastro.

For more than 25 years, Mr. Policastro was a persistent spokesman for organized labor in the state, expressing impatience and even disgust for those who failed to share his visions and feelings.

"I'm sick and tired of meeting politicians who are nice fellows," he declared in 1962. "The only yardstick is: Do they deliver for labor what labor needs?"

He was a constant lobbyist at the State House and in Washington on behalf of his 50,000-member organization.

"His relationships with legislators involve little real friendliness," one observer noted. "But he is 'Tommy' to virtually everyone on Capitol Hill, where blunt speech is his chief characteristic, and most legislators listen with respect for the political support or opposition he is supposed to control."

It was a political strength he exercised vigorously, and often for liberal causes.

Civil rights, women's rights, farm workers, opposition to the "senseless" war in Vietnam—Mr. Policastro defended them all.

In 1975 he took on a lawyer who said the Equal Rights Amendment's protection for women was already covered by other amendments in the U.S. Constitution.

"You say there are already provisions in the laws," he shouted. "They told this to the black people, they told this to the workers, and now they're telling this to the women. I say this is baloney."

But his first devotion was to trade unions.

"If there is one organization in the country that can say it is responsible for the high economic standards of people here, it is the labor union," he told a retail clerks' union dinner.

His death brought a tribute from Governor Garrahy, who said:

"In the death of Thomas F. Policastro, Rhode Island has lost a dedicated servant of the labor movement. During the last quarter century, through his work in the labor movement, he played a major role in every effort to improve the quality of life for working people. He was active on many fronts but he will be remembered best as a champion of the worker. It is a deep personal loss to me. Tom was always ready to assist me. He was a friend and I will miss him. The prayers and thoughts of the Garrahy family are extended to Tom's wife, Dorothy, and his son, Tom, Jr."

U.S. Rep. Edward P. Beard said: "The passing of Thomas Policastro should be mourned by everyone in Rhode Island because his whole life was devoted to making life better for everyone, not just for union workers. Tom Policastro was one of the greatest public servants Rhode Island has ever seen."

Roger M. Freeman Jr., president of the United Way of Southeastern New England, said: "In the death of Tom Policastro, Rhode Island has lost an outstanding advocate for

those in need. We know personally of his commitment to the poor and needy. As a vice chairman of this year's United Way campaign, and through his service on the executive committee and the board of directors of the United Way of Southeastern New England, Tom Policastro provided inspirational leadership. He brought organized labor into the fullest possible involvement in the United Way, and he will be missed by the entire United Way family."

A long-time staff representative of the United Steelworkers of America, Mr. Policastro joined in the campaign against Blue Cross & Blue Shield launched in the early 1960s by Lawrence Spitz, his Steelworker mentor and former sub-district director for the union in Rhode Island.

While Spitz pressed his complaints against fee hikes and the alleged collusion of the doctors who both billed the system and controlled it, observers wondered if threats from the unionists to establish a counter-health insurance system would ever come true.

But Mr. Policastro and Edwin C. Brown, his cohort as secretary-treasurer of the AFL–CIO since it was formed in 1958, nursed the Rhode Island Group Health Association into existence.

It was the first health maintenance organization in the nation recognized by the federal government and Policastro was its founding president.

Increases in the minimum wage, improvements in Social Security, and oil refineries that have been the goals of organized labor got Mr. Policastro's constant backing.

He oversaw the passage of economic reform legislation that provided unemployment benefits for strikers and he bitterly resisted efforts to take those benefits back.

An apt testimonial to Mr. Policastro came in 1957 from Al Barkan, then assistant director of the political arm of the national AFL–CIO.

With Senate hearings then inveighing against labor racketeering, Barkan complained that businessmen and the press were too willing to make it appear that only crooks head labor unions.

"If they want honest news," he declared, "I submit that leaders like Thomas Policastro are more representative of the labor movement than the scoundrels they parade across their pages every day."

One of Mr. Policastro's most lasting fights was with the media—and particularly the Providence Journal Co.

Complaining that the Journal-Bulletin was blacking out news of negotiations toward an initial contract with Local 41 of the American Newspaper Guild in 1960, Mr. Policastro christened the papers "the iron curtain of Fountain Street."

Mr. Policastro began his working career in the forging department of the Nicholson File Co. after graduation from Central High School in Providence in 1938. Before entering the Navy in 1942, he had become a committeeman for the independent union at Nicholson.

After his return from World War II in 1946, he rose quickly through the union ranks at Nicholson, becoming grievance man on the night shift and then union president in 1949.

In 1950 the union became Local 4408 of the Steelworkers, and he remained president until he became a Steelworkers staff man in 1953.

The Steelworkers were part of the Congress of Industrial Organizations, more militant and outspoken than the craft union American Federation of Labor.

Mr. Policastro rose swiftly within the Rhode Island CIO and was elected executive vice president in 1952, and reelected in 1953 and 1955. He replaced Frank J. Benti as president when Benti died later in 1955.

From the moment he took office, he began pressing for merger of the two labor federations.

Politically, he was a staunch Democrat and served as a Rhode Island delegate to the 1956, 1960 and 1964 conventions.

But that affiliation too was not always to his liking.

When the AFL–CIO presented its economic recovery plan for the recession of 1975, Mr. Policastro barked: "The Republicans under Ford have no imaginative thinking, no leadership and no confidence that they can right the ship of state. The Democrats are no better off. If they were put in charge of the country tomorrow, they would not know what to do."

Among the many public groups on which he served over the years were: the Urban League (he was a director); the United Way (he was a long-time vice president); and the Rhode Island Consumers Council (he was the first president in 1967).

He also helped found the Quirk Institute for Industrial Relations at Providence College. He was also a member of McAllister Post, VFW.

He was born in Providence on Oct. 2, 1919, a son of the late Joseph and Delia (Mullaney) Policastro.

Besides his wife, he leaves a son, Thomas Policastro Jr. of Providence; a sister, Mrs. May Leddy of Providence, and two brothers, Anthony M. Policastro of Providence and Frederick Policastro of North Providence.

His funeral wil be held Tuesday from J. F. Skeffington Chapel, 925 Chalkstone Ave., Providence, with a Mass of Christian Burial at 11 a.m. in the Cathedral of Sts. Peter and Paul, Cathedral Square. Burial will be private.

Family members have requested that instead of flowers, contributions be made to the Thomas F. Policastro Memorial Fund at Providence College.

A TRIBUTE TO THOMAS POLICASTRO

This August the working people of Rhode Island lost a fine man. Thomas F. Policastro, president of the Rhode Island AFL–CIO, was a true civil libertarian—one of those rare people who realize that until we all have equal opportunity, none of us is truly free. His tireless efforts for workers' rights brought us better working conditions, higher wages, more options for medical insurance, and strikers' benefits.

Mr. Policastro didn't avoid controversy when he believed something needed to be said, and he didn't hesitate to speak clearly and forcefully in favor of the Equal Rights Amendment. He said too many employers told him workers didn't need a benefit written in a contract because the employers were already giving it to the workers. He told our state legislators who tried to tell women they didn't need the Equal Rights Amendment because they had all those rights the same thing he told the employers. "If they already have it, then you won't mind giving it to them legally—put it in writing."

Mr. Policastro will be remembered as a good man and an outstanding labor leader by those who knew him. Many women in Rhode Island will long remember the man who spoke so willingly and so well for women's rights.

PROVIDENCE.

CONCERN FOR SENIOR CITIZENS

Mr. DOMENICI. Mr. President, I would like to share with my colleagues, a refreshing experience which demonstrates American's concern for its senior citizens.

I am most proud of a community in northern New Mexico that has taken the initiative to provide for the health and happiness of the elderly without Federal assistance.

Los Alamos, through its early years, was a city that did not have an older segment in its society. Most of the people living in the city were young couples, who worked for the Los Alamos Scientific Laboratory. In the past few years, many people in the city have reached retirement age and are in need of social and community service.

I would like to commend the Los Alamos Chapter of the American Association of Retired Persons, the senior center and all citizens of Los Alamos for developing and maintaining programs to meet the needs of senior citizens.

Mr. President, I ask unanimous consent that the article that appeared in the Los Alamos newspaper entitled " Los Alamos Senior Citizens Leading Active Lives" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

LA SENIOR CITIZENS LEADING ACTIVE LIVES—197 MEMBERS OF LOCAL AARP FORM INVOLVED COMMUNITY-SERVICE GROUP

(By Sue Tester)

Whether they call themselves grey panthers, senior citizens or the elderly, there are an increasing number of people over 60 in Los Alamos now than ever before. And the community's concern for their health and happiness is burgeoning.

For several decades after its beginning in the early 1940's, Los Alamos was known as a "town without grandparents." Most of the townspeople were young couples with still younger children, who had moved away from the older generations to work at the Los Alamos Scientific Laboratory.

Now, however, more people in town reach retirement age every year. And more parents of LASL employees are retiring, selling their homes elsewhere and moving to the hill to be with their children.

This situation, combined with the nationwide emphasis on a better life for the aged, has led to the formation of a number of programs by and for the elderly in Los Alamos.

Whether a person is still vigorous and alert or suffers from mental or physical disabilities, there are activities offered.

Some senior citizens, like Winifred Amsden, a vivacious 69, are well able to practice the American Association of Retired Persons (AARP) motto: "To serve and not be served."

Mrs. Amsden, who ranched with her late husband in Pojoaque for 30 years and traveled extensively, will now be journeying throughout northern New Mexico and across the United States in her new role as AARP assistant to the state director.

The 170 members of the Los Alamos AARP, aged 55 and over, form an active community-service group, particularly in support of legislation favorable to older persons.

"We meet with Sen. John Rogers and Rep. Vernon Kerr before and after each legislative session to discuss our priorities and to learn of their progress," Mrs. Amsden said.

The group also has sponsored an ambitious community crime prevention program and regularly offers seminars on topics of concern such as nutrition or high blood pressure, and special current events topics such as nuclear waste disposal.

Social and holiday gatherings are a lighter part of their program, and the national AARP offers members a number of special benefits such as group tours, insurance programs and drug discounts.

Headquarters for the Los Alamos AARP are in the basement of Fuller Lodge, just across the hall from the two-year-old county-financed Los Alamos Senior Center. The Senior Center deals with more elderly people than does any other Los Alamos organization.

"The AARP and the Senior Center are two distinct organizations, but we work together to fill a special need in Los Alamos," Mrs. Amsden said.

The Senior Center has 340 active members 60 and over, and sends out its monthly newsletter to almost 1,000 persons.

Besides offering a pleasant place for senior citizens to drop in for conversation and a cup of coffee, the Senior Center offers a wide variety of services and programs.

A partial sampling of the offerings includes crafts groups; bowling; swimming; book discussions; chorus; income tax consultation and other help in filling out forms, such as for Medicare and Medicaid; telephone reassurance calls to shut-ins or those alone; van transportation to stores, the library, the medical center, part-time jobs and elsewhere; help with home maintenance through the Civitans, and outings to places as diverse as the South Mesa cafeteria and the Santa Fe Opera.

"We'll try to help with almost any problem or need or interest a senior citizen has," said Senior Center director Louise Carlson.

The Retired Senior Volunteers Program, directed by Betty Ehart, sends older people out to aid Los Alamos as hospital volunteer workers, tutors in the schools, assistants at the Sheltered Workshop, library and museum aides, or just as friends to someone who needs one.

Two programs intended for senior citizens with physical problems or memory difficulties are the weekly Spinning Wheel classes, directed by occupational therapist Avery Nagel, and Day Out, conducted several mornings and afternoons a week by Yvonne Nichols.

"The Spinning Wheel offers a chance for an older person with any sort of health difficulty to enjoy individual crafts or group activities. And families can be assured that whatever the difficulty, all our relations with patients are confidential," Mrs. Nagel explained. Besides individual projects, the group has made dozens of colorful pillows for local kindergartners.

The Day Out is geared for any handicapped adult and offers a full program of crafts, games, music, projects and gentle exercises for a nominal fee.

Primary among the needs of the Los Alamos elderly, all the women agreed, is a retirement-nursing home, which has been under discussion for several years now. Mrs. Amsden also said transportation off the hill, to Santa Fe and Albuquerque, is very difficult to arrange.

Mrs. Carlson added Los Alamos has not received federal funds for the elderly because the number of problem situations in Los Alamos is not great enough.

THE GENOCIDE CONVENTION IS NOT A THREAT TO THE DEFENSE AND SECURITY OF THE UNITED STATES

Mr. PROXMIRE. Mr. President, I once again urge my colleagues to ratify the Genocide Convention, and wish to refute one of the arguments against it; the question of a potential threat to our national defense. During the hearings on the convention during May of this year the Voter's Interest League of Baltimore expressed its belief that its ratification might lead to a situation in which an American serviceman would have to weigh his duty to obey orders with the possibility that he be court-martialed for an act of genocide.

The Defense Department, however, finds no merit in this argument. During the same hearings, testimony was presented in which representatives of the Department stated not only that the laws of the United States under which they operate were consistent with the convention's principles, but further, that ratification of the convention would be a "positive step in the national interests of the country."

In addition, the Foreign Relations Committee has consistently emphasized that its recommendation of ratification includes several specific understandings. One of these is that the wording "intent to destroy, in whole or in part, a national, ethnical, racial, or religious group, as such" be construed to mean that such an act was done "in such a manner as to affect a substantial part of the group concerned."

Mr. President, this argument, like so many before it, has not withstood cross-examination, and is merely an excuse for delay.

President Carter, in addressing the United Nations earlier this year, stated in part:

I know, perhaps as well as anyone, that our own ideals in the area of human rights have not always been attained in the United States, but the American people have an abiding commitment to the full realization of these ideals. And we are determined, therefore, to deal with our deficiencies quickly and openly. We have nothing to conceal.

The President is absolutely correct. I urge my colleagues to support the President by ratifying the Genocide Convention and correcting, once and for all, our grievous mistake.

KEEP TRADE FREE

Mr. JAVITS. Mr. President, an article in the September 3, 1977, issue of the New Republic entitled "Keep Trade Free" eloquently replies to the false claim that imports only "export jobs." On the contrary, this article points out, fair international trade fosters a gain in jobs and security and prosperity for our Nation.

Mr. President, I ask unanimous consent that this timely article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KEEP TRADE FREE

(By Stan Luxenberg)

Recently businessmen in Taiwan have begun to face a new problem: competition from lower-wage foreign countries. In the last three years, as Taiwan's productivity and sales climbed, factory wages doubled to $146 a month. Now the country finds it increasingly difficult to undersell the textiles and electronic appliances produced by South Korea and Singapore. Shoe production, a pillar of Taiwan's economy, has begun moving to Indonesia and Africa.

The Taiwanese, of course, are not the first to grow concerned about the difficulties that can accompany free international trade. Throughout the industrial world, the clamor for increased trade barriers has grown. Businessmen and union officials, struggling with persistent unemployment and growing trade deficits, have singled out imports as the villain. Britain and France are demanding more restrictions on imports of Asian textiles, while the EEC Commission is trying to limit purchases of Japanese ships and cars. Last spring President Carter was pressured to negotiate quotas on imports of color TVs and shoes. This protectionist campaign is misguided. If it continues, the economies of the industrial countries will suffer.

As the classical theory of comparative advantage has it, all nations benefit from free trade over the long run. If each country produces what it does best and permits trade, all will enjoy lower prices and more variety because of economies of scale and increased specialization. Just as it would be foolish for each state in the union to manufacture its own cars, it would make little sense for the U.S. to produce all the goods it needs. The most efficient use of world resources is achieved if the U.S., for example, concentrates on producing computers and wheat, while Taiwan makes transistor radios and shoes.

In a dynamic world economy, with wages and technology always shifting, comparative advantages change and countries must constantly switch their fields of specialization to remain competitive. Several years ago Swiss watchmakers dominated their market, while American companies struggled. Now with the rise of the new technology, such as digital watches, American companies are booming. Swiss watchmakers are looking for other work. Such shifts benefit the world economy by providing consumers lower prices and a wider variety of goods.

Tariffs and trade barriers are designed to prevent changes in specialization. By raising the prices of foreign goods, they force consumers to purchase more expensive or less desirable domestic goods. This may preserve a particular home industry, but it fuels inflation and decreases world sales.

It is difficult to calculate precisely how much trade barriers now cost American consumers, but most economists agree that the price tag is at least several billion dollars. Last February the US International Trade Commission declared that imports were hurting the American shoe industry and recommended increased tariffs over the next five years. Andrew Brimmer, a former Governor of the Federal Reserve Board and now a private consultant, concluded after a study that the proposed tariff would cost consumers $500 million in 1977 alone. As with most tariffs, the increased costs would be imposed mainly on lower-priced goods: the cheap vinyl sandals and the flimsy sneakers that are purchased by poor people. Such a tariff is, in effect, a tax inflicted primarily on the poor to subsidize the jobs of others.

Besides raising prices, tariffs stifle international trade, reducing sales and consequently employment. If the US uses new trade barriers to cut imports, other countries will reduce their purchases of American goods simply because they will have fewer of the dollars formerly earned from trade. About nine million American jobs depending on exports could be threatened. During the 1930s, many countries discovered how destructive trade barriers can be. Seeking to protect depressed domestic industries, gov-

ernments imposed trade barriers that reduced international sales and plunged the world deeper into recession.

In the US, bicycles, glass, chemicals, steel, generating equipment and other products already are protected by special tariffs and quotas. The list is likely to grow. All these industries represent at least some inefficient use of resources. Other countries can produce the goods cheaper because of lower wages or better technology.

In a growing economy some industries inevitably lead the pack. Benefitting from new technology, they tend to be more productive, to pay higher wages and to compete successfully on world markets. At the other end are those industries in decline. They are less profitable and must strain to match wage rates that have been bid to high levels by more productive companies. These lower-end businesses are often threatened by imports and cry out for protection. Responding to these demands makes little economic sense.

Because wages in this country are high, American companies should only compete in fields where worker productivity is great. If wages are twice as high as those in Britain, then American firms should only make products where worker productivity is twice as high. Britain should produce the other products, since (assuming other costs are equal) it can make them more cheaply. As the theory of comparative advantage indicates, society should concentrate its resources—including labor—in the most productive areas. Tariffs and trade barriers prevent this. They protect weak industries, forcing a nation to put resources in areas where they will do least economic good. When a tariff is imposed on imported shoes, Americans then have less to spend on electronic calculators, for instance. Increases in the standard of living will be slowed. Over the long run there will be more low-paying jobs in shoe factories and fewer higher-paying positions making calculators. Quotas have much the same effect. Since fewer foreign products can enter than demand warrants, prices increase.

The free-trade process of transferring production to more efficient areas increases prosperity and aids industrial development, but it is not without costs. The dying mill towns of New England provide harsh evidence of the effects of changes in competitive advantage. Cheaper or better goods coming from overseas (or from other areas of the country) drove out local industries. The U.S. textile and apparel industries have been especially hard hit by low-cost foreign goods. Thousands of workers have lost their jobs beginning in the 1950s, when Japanese producers first entered the market. The situation is not unique to the U.S. Industrial countries throughout the world have suffered similar hardships.

Textiles and apparel are particularly suitable industries for third world countries. They require minimal skills and little capital. With wages at 30 cents an hour or less, the developing countries can easily undersell their richer competition. Indeed, the third world nations have argued persuasively that most clothing production should be moved out of the industrial world. This would provide cheaper products for the developed countries and more jobs for the third world. What has prevented the transfer is a structure of quotas and tariffs designed to protect the artificially expensive industries of the developed countries.

Protectionists argue that tariffs involve a tradeoff: consumer prices may be higher, but society will pay less for welfare, crime and other costs related to unemployment. In fact, the tradeoffs are generally one-sided. Under the shoe tariffs proposed by the International Trade Commission, the price of preserving one job paying $106 a week would be $31,000 in the first year. A more efficient way to deal with unemployment is to expand public-works jobs or to use monetary and fiscal policy to stimulate the economy so that workers pushed out of one industry could immediately be rehired somewhere else.

If workers were finding new jobs today, the protectionist arguments would have no political impact. But as the AFL–CIO rightly points out, many of the people being laid off because of imports are not able to move into other fields. They are unskilled, often minorities and women. Since the Trade Act of 1962, the government's solution for these workers has been adjustment assistance, providing people with additional unemployment benefits and helping them to be retrained for new jobs. The program has been a failure. Not enough money has been available; and even when people were retrained, too often there were no jobs for them. The Carter Administration has begun an expanded program.

The new program may help some of the unemployed, but the singling out of import victims for assistance is a dubious idea. Why is the worker laid off because of competition from Asia more deserving of assistance than the worker whose factory closes because of new competition in the Sunbelt? And what of the worker who loses a job because of automation, or the youth who never had a job at all? Clearly, adjustment assistance is designed primarily to appease union officials and other protectionists—not to help the unemployed. Workers in industries hurt by imports would be better served by a national full-employment effort.

Another aspect of Carter's adjustment plan would be assisting factories to modernize. If a company needs help for several years in order to become competitive, it would make sense for the government to step in. Unfortunately, in most cases, the dying factories are beyond help. The small family-run shoe and electronics factories are being driven out by glistening, corporate American operations as well as low-wage foreigners.

Some of the loudest cries of anguish and demands for protection come not from these small family firms and not from unions, but from large corporations such as Zenith (which finds it difficult to compete with Japanese color televisions) cloaking themselves in alleged concern for workers' jobs. President Carter should ignore these cries and remember who really gets hurt when we abandon the principles of free trade.

THE ACHIEVEMENT SCHOLARSHIP PROGRAM

Mr. HART. Mr. President, 5 years ago a nonprofit organization, called the Achievement Scholarship Program, was founded in Washington, D.C. Since its inception, this extraordinary pilot program has given ex-offenders a second chance by helping them get the education they need to become productive citizens.

This program—designed to explode the myth that those who go through our correctional system are doomed to failing—is a fine example of what can be done on a local level by those who care about the rehabilitation of our Nation's young ex-offenders.

The Achievement Scholarship Program, ASP, provides "seed-money" scholarships toward college, trade school, or special education for Washington, D.C., area youth and young adults on probation or parole from area correctional institutions. ASP also provides on-the-job training for at least one program participant who serves as the program's executive director. I ask unanimous consent to have a statement printed in the RECORD to explain the program in further detail by its current executive director, Edward Hill, Jr.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE ACHIEVEMENT SCHOLARSHIP PROGRAM

(By Edward Hill, Jr.)

Today, at 27, I am running a unique educational program for ex-offenders, the Achievement Scholarship Program (ASP).

Only six years ago, I was without direction, without goals.

Here is how this transformation occurred.

In the fall of 1975 I reluctantly accepted an Achievement Scholarship from the Achievement Scholarship Committee. That is when life took on a new twist for me. Nine months later the Achievement Scholarship Committee, which runs the Achievement Scholarship Program, offered me the job as special assistant to the executive director of ASP and again, reluctantly, I accepted the position. My reluctance was due to past unfortunate experiences. After a period of "getting my feet wet," I became ASP coordinator. Now I have moved into the job of ASP executive director, running the program on a day-to-day basis.

ASP is a pilot program going into its fifth year designed to provide ex-offenders with "seed-money" scholarships to further their education in college, trade school or special schools.

First as coordinator and now as executive director of this pilot program, this year I was in charge of the annual ASP meeting in May, I was master of ceremonies of our annual awards ceremony in June, I made the arrangements for our annual how-to-study seminar for our ASP awardees in July, I have made presentations before organizations that have expressed an interest in giving grants to ASP, and I have worked on grant applications. I am also responsible for keeping track of ASP awardees who attend the University of the District of Columbia and other local colleges.

Since I became an awardee of an Achievement Scholarship in 1975 and a part-time ASP employee about a year later, ASP has opened many avenues to me. By providing scholarship "seed-money" for the advancement of my education and by providing me gainful employment, ASP has become an integral part of my life. Hence, it has given me hope and purpose.

Among the valuable learning experiences I have gained in ASP: I have learned to work with people from different walks of life; I have learned the importance of "hanging in"; I have learned to expand and mature as a human being; and I have learned the significance of accepting responsibility and leadership.

My goal as an employee of and an awardee in ASP is to help the other awardees in the program with positive alternatives through educational scholarships. Persons who are Achievement Scholarship awardees are considered students by ASP and we treat them accordingly.

The ultimate goal of ASP is to explode the myth that those who go through the criminal court system are losers. In ASP we hope to prove that many—even most—ex-offenders can become productive citizens.

ASP was founded in 1973 as a tax-exempt, non-profit organization to provide "second-chance" scholarships to ex-offenders to help them move back into the mainstream of the community as skilled, taxpaying citizens.

ASP works only through official correctional agencies in the Washington, D.C.,

area in finding candidates for ASP scholarships, and all candidates nominated by such agencies must be approved by the Achievement Scholarship Committee. They must be on parole or probation

As of Sept. 3, 1977, ASP had made 64 awards to 63 awardees, including three special awards to two awardees. Of the 63 awardees, 5 have finished their courses, 28 were in school during the spring 1977 term, 19 dropped out, many for financial reasons, and the rest either did not pick up their scholarships or had their scholarships deferred. Of those in school, one is in the Army and one is a recidivist continuing his education through an ASP-awarded McGraw-Hill home-study scholarship which he is completing by mail from Lorton prison. Of the 63 awardees, 57 have been men and 6 have been women. Two have been recidivists. ASP has been increasingly effective in its efforts to keep awardees in school after a trial-and-error period during which we gained both valuable and painful experience.

Funding through contributions for the continuation of our fast-growing ASP is critical to its survival. Bill Butler, a legend in his own time because of his 40 years' work with D.C. youth, is chairman of the 11-member volunteer Achievement Scholarship Committee. Helene C. Monberg, a Washington news correspondent, is founder of ASP.

The Achievement Scholarship Program is designed to keep the ex-offender out of the "revolving door" by providing him with alternatives through the educational process.

ENERGY SNOOPS

Mr. GARN. Mr. President, before the recess, I inserted in the RECORD a number of critiques of Amory Lovins' theories of energy economics. The critiques were prepared by experts in the fields of energy, economics, and management, and dealt with specific, often technical flaws in the Lovins' thesis. These critiques are being published as a book, in an effort to continue the dialog on the important questions of energy use in the United States, and in the world in general.

If I could summarize the criticisms, Mr. President, I would say that the critics seem to feel that many of Mr. Lovins' solutions to our energy problems are mutually exclusive, that they deny the economics inherent in large scale operations, that they ignore the effects of prices, and the costs of the changes. To these criticisms I would add that the entire Lovins' thesis appears to begin with a bias against further growth. Now I happen to believe that a no-growth policy would produce almost uniformly harmful results, both for our own lower-income population and for the underdeveloped countries of the world, which can only advance if the economic pie is enlarged. But irrespective of my personal feelings, I would like to note that the bias against growth is just that, a bias. By starting at that point, Mr. Lovins skews the results of his inquiry.

He does one other thing that ought to be noted here. In an effort to reach the conclusions he desires, starting from the biases he has, he is forced to repeal the basic laws of human behavior. In fact, throughout his analysis runs the theme that huge changes in social behavior and life-styles would follow from adoption of his recommendation. In fact, those changes would have to precede the adoption of his recommendations, and there is no evidence that that is going to happen.

It is possible, of course, to change social behavior in radical ways. It has been done in Communist China. In fact, many of Mr. Lovins' adherents cite the Chinese example as one we perhaps should adopt in this country. In China, thought, or at least behavior, control is achieved by coercion, applied more or less spontaneously by the masses of people. In China, this form of brainwashing, or mass behavior modification, has achieved such triumphs as eliminating spitting on the sidewalk, venereal disease, and open garbage cans. If China had much energy to waste, we can assume that waste would be controlled in the same way.

In fact, in the August issue of Human Behavior, Kenneth Lamott has described for us the behavior modification techniques in use in China, as they might be applied to energy wastrels in the United States. It is a chilling picture, although I have no doubt that some of the followers of the no-growth ethic would react quite differently. I ask unanimous consent that Mr. Lamott's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MAO SOLUTION

(By Kenneth Lamott)

So far the behavior mod experts haven't discovered how to steer us away from our greedy destruction of the environment. Maybe we ought to take a leaf from the textbook of that eminent Chinese psychologist, Chairman Mao. He had his ways, and they seemed to work pretty well.

Kenneth Lamott, an author and journalist, lives in Bolinas, California.

Like passengers on a Ship of Fools, we Americans continue to use up everything we own as if there were no end to our possessions. Now and again somebody on the bridge of the ship turns on the PA system and exhorts us to change our ways. We listen politely and then go on behaving exactly as we did before, certain that the skipper and crew will bring us through all right, that we will always have enough to eat, that the fuel bunkers will never go dry and that our ship will never founder on a treacherous rock just below the surface. The ship, after all, has always made port before.

Our only excuse for this prodigal behavior is that we have listened to too many prophets for our own good. E. F. Schumacher has urged us to think small and act small. Barry Commoner has predicted that our socioeconomic system can last only if we reduce our standard of living. Lewis Mumford has told us that we are already living in a new Dark Age and that our lives will soon resemble nothing in our past experience. Robert Heilbroner has argued convincingly that there is little hope for humanity. Most recently, President Carter has told us soberly that if we fail to change our ways, the alternative will be an unparalleled national disaster.

No matter how jaded we passengers may be, the prophets are, of course, right. Neither solar power nor the fusion reactor is going to gallop over the ridge to save us from our folly. The precise form that the almost-inevitable catastrophe will assume is a matter of intense current argument: will the world population outstrip the supply of food? Will industrial growth outstrip the sources of energy? Will fuel become so expensive that our economic system falls into terminal collapse? Will we pump heat into the amosphere at such a rate that we will irreversibly change the climate of the world? Will we suffocate in a worldwide smog?

No matter. The fact that we are facing a multitude of alternative catastrophes does not make any of them less threatening. Let us proceed from here. Clearly, there is a consensus among the prophets that if we are going to survive in a livable world, we are going to have to learn to behave, both privately and publicly, differently than we do now. If we are lucky, we have a 25-year grace period in which to change our behavior in profound and permanent ways.

As Carter made clear in his energy speech, conservation is the key, and energy can be conserved effectively only if "people understand the seriousness of the challenge and are willing to make sacrifices." Sacrifices are notoriously the most difficult sort of behavior to cause to happen except under conditions of extreme physical and/or emotional stress. Reading the president's speech, I began to wonder how he and Arthur Schlesinger proposed to create in short order a climate favorable to self-denial.

The notion that Americans will voluntarily deny themselves anything is a generous delusion. The dark comedy of Prohibition is not too far behind us. We did not win World War II through self-denial but rather in spite of profligacy as the bitter history of hoarding, cheating, black marketing and profiteering makes all too clear. Even when the penalties are sizable, we Americans have always managed with our native ingenuity to find ways to indulge ourselves.

Acting on the perhaps naive notion that one of the chief businesses of behavioral psychologists is to change behavior, I looked into the work of B. F. Skinner and his followers. I concluded that Skinner is an able publicist and an entertaining utopian novelist, but that his entire life's work has produced nothing of more than marginal use in our predicament. Behaviorist psychology is a bust so far as its practical applications go. Skinner is a gifted animal trainer who has effectively used "contingencies of reinforcement" to teach pigeons to play Ping-Pong; but so far as I have been able to find out, his successes with normal human beings have been both trivial and ephemeral.

When driven to the wall, Skinner defends himself by citing the success of behavior modification in rehabilitating criminals or helping mental patients on their road back. If these assertions are true, they are among the best-kept secrets of penology and psychiatry today.

No. Behavior mod—at least in its present form—is no help to us and we don't have time to wait for Skinner's successors to engineer the necessary improvements. If we are going to survive, we must change our behavior en masse by methods and techniques that are already at hand and that have been proved to work. Fortunately, we are not entirely without such resources.

As a review of history since World War II makes clear, the late Mao Tse-tung, and not B. F. Skinner, was the greatest behavioral psychologist of the 20th century. Under Mao's guidance, a quarter of the world's people went through the greatest mass process of behavior modification in history. This great achievement was accomplished by psychological means and not (or at least not usually) at the point of a gun. Furthermore, no matter how much their behavior may have been manipulated, the great bulk of Chinese are reasonably happy, secure in their conviction that they are part of a great historic

movement that has raised up the poor and helpless.

Consider some of the nonpolitical evidence for the Chinese achievement. Until recently, the Chinese have tolerated public filth and pests on a massive scale as phenomena that nobody could do anything about and were simply part of the order of things. Unprotected food was soon covered with flies. The streets were strewn with filth, both human and animal. Smallpox, the plague, cholera and typhus were endemic. Venereal disease was common. The Communists recognized that all these afflictions have large behavioral components. After their victory in 1949, they methodically set out to eradicate them, using rought-and-ready but enormously effective principles of mass psychology.

To take one example, venereal disease was tackled under the rubric of the Great Patriotic Health Movement with slogans such as "We don't want to take VD into Communism." Writer Edgar Snow was told by Dr. George Hatem, an American who chose to stay in Mainland China, that the campaign was so effective that VD was eliminated in 40 days in a county in Kiangsi province with a population of two million. This was accomplished by teaching nonmedical people how to do blood and urine tests and to diagnose gonorrhea and syphilis. Their training took three days. Most importantly, the campaign against VD was supported by all the local political and neighborhood associations.

As Dr. Victor W. Sidel, an American physician who traveled in Mainland China in the early 1970s, reported, posters describing the symptoms of syphilis and gonorrhea were displayed in all public places. The testing campaign went on from door to door, missing nobody. Neighborhood pressure was exerted on infected people who neglected to get treated. Neighborhood committees campaigned vigorously against prostitution and promiscuity.

Even if the 40-days wonder in Kiangsi province strains belief, the success of the Chinese in ridding their country of the housefly is simply a matter of record. Virtually every recent traveler who knew the old China has reported back with admiration that Chinese cities have been swept clean of flies—and also of mosquitoes, bedbugs, rats, mice and lice. Again, this not-so-small miracle was accomplished through neighborhood organization and pressure against people who, for example, left their garbage cans uncovered. A small matter, perhaps, but it has some important lessons for us.

Other travelers have commented favorably on the cleanliness of the city streets by comparison with our own—a dramatic contrast to the old China in which urinating and defecating along the curb was acceptable behavior (at least for children) and hawking and spitting was almost a national pastime. When he asked about this change, Snow was told by an elderly man in Shanghai. "Now you see the hsiao hai-tzu ["children"] telling us older ones not even to spit, to use the spit bucket. Not to throw dirty things on the street. . . ."

The psychological principles that brought about these behavioral changes were applied by the Chinese leaders in a more ominous form in the Thought Reform movement. "Brainwashing" is a word I would prefer not to use except, perhaps, to describe a process of coercive persuasion used on people who are locked up and who can be subjected to various severe measures, such as depriving them of sleep and food. As the Chinese have shown, the thoughts and behavior of the average citizen can be manipulated without applying such extreme measures.

Reform as practiced in Mainland China goes back to the days in the wilderness of Yenan, when the Communists were engaged in guerrilla warfare against both the Japanese and the Nationalist armies of Chiang Kaishek. As Harriett C. Mills, an American who was brought up in China and spent 25 years there, described the origins of Thought Reform: "During their 20-odd years as guerrilla fighters, the Chinese Communists stumbled, through necessity, on one basic element of what is now group study. In teaching uneducated peasant recruits to use weapons, obey commands, live together and protect the country people, the Communists gradually found that small discussion groups were the best way to make sure each man understood not only how but why."

Thought and behavior reform in Mainland China thus came to depend on two main structural elements: (1) neighborhood associations set up everywhere to monitor behavior and exert pressure for compliance; and (2) study groups of six to 12 people organized in every office, factory, shop and school. Instead of illiterate peasant recruits, the study groups included production-line workers, teachers, office employees, bus drivers, collective farmers, physicians, university professors.

Everybody had to belong. There was no escape in silence—every member had to take part. There was no escape in pretending to agree—criticism and self-criticism were the order of the day. Refractory citizens were not sent to the firing squad; instead, they were exiled from the group.

While neighborhood associations and street committees kept close track of sanitation, family health, delinquent behavior, rationing and social services, the study groups probed the psyches of the great mass of the Chinese people, bringing their thought and consequently their behavior into accord with the official line. In gross pragmatic terms, the prescription worked. Even some scientists and Western-educated scholars publicly confessed their earlier mistakes and declared their earnest willingness to continue the job of reconstructing themselves. As Yale psychiatrist Robert J. Lifton pointed out, the Chinese model was more powerful than George Orwell's because each person was monitored by many pairs of human eyes rather than by the impersonal telescreen of 1984.

How was this accomplished in a country that for millennia had been notable for its diversity? It is tempting to find the answer in an inscrutable quality of Chinese individual psychology—and, of course, it is quite wrong. Dr. Lifton has told us that Chinese thought reform does not depend on anything that is distinctively oriental but, instead, on a universal quality of the human personality: the capacity to suffer from guilt and shame. As he put it, thought reform "can revive the store of guilt and shame present in all of us, as a consequence of both our childhood transgressions and our adult limitations."

We can now understand both the power of the Chinese model and its universal application. Inside each of us, a dirty little child hides trembling and afraid. The manager of the Bavarian factory hears his mother's voice saying. "Du bist ein süarchterlicher Dreckspatz!" The Tokyo bank clerk hears "Aa iya! Kitanai! Kitanai!" The Harvard professor hears "Ugghh! You disgusting, dirty little child!" in this matter, we are all the same.

With the intention of comparing Maoist-applied behaviorism with American research into the control of mass behavior, I phoned the National Clearinghouse for Mental Health Information and asked for a bibliography of experimental work aimed at changing mass behavior with regard to the conservation of energy and natural resources. The information specialist at the other end of the line in Rockville, Maryland, sighed and told me she had recently received several requests like mine but that there was simply nothing at all available.

Then I discovered from a recent newsletter of the American Psychological Association (March 1977) that some psychologists are becoming exercised about the lack of encouragement for behavioral research of this kind in the United States. As the APA Monitor reported, "Slowly this attitude is changing. Policymakers are beginning to recognize that research on human behavior and social organization may produce some clues to solving the energy crisis." The editorial went on to report that a small start had been made in the recent formation of a Consumer Motivation and Behavior Branch of the Energy Research and Development Administration (ERDA). The branch's entire bankroll is $500,000—against ERDA's total research budget of $3.7 billion a year!

My attention was particularly caught by one of the initial projects ERDA is funding (for $85,000)—a study of strategies for reducing the energy use in apartment buildings where electricity and gas are recorded on a master meter rather than on meters in individual apartments. Earlier studies have shown that individually metered buildings use about 35 percent less energy than comparable master-metered buildings.

As the Monitor reported, the principal investigator, Stuart Cook of the University of Denver, "says he'll test social incentives as a means of reducing energy consumption. The method will involve participatory management, i.e., the manager of a building bringing together all of the tenants and discussing what can be done to reduce energy consumption. Cook will review and test numerous strategies over the next several months."

Dr. Cook, meet Mao Tse-tung! This should indeed be a most interesting study, particularly with regard to the strategies that turn out to be successful. In the broadest sense, we are all occupants of a master-metered building called the United States, and the discovery of workable social incentives is precisely our problem.

We can't wait, however, until ERDA scrapes up a sufficient budget for behavioral studies. At best, finding some usable results will burn up at least half of our 25-year grace period. We must, as Carter has recognized, begin now with the means we have at hand.

I am accordingly going to offer a rough outline of a system that will adapt the essential principles of the Chinese model of mass behavioral control to American conditions in a time of scarcity. Let us call the proposed system simply the American Way.

These are the 12 keys to the American Way:

1. The roots of the American Way will be found in our national experience—in the thrift and frugality practiced by the Indians of the plains and the forests, by the earliest settlers, by the pioneers who moved the frontier westward, by the immigrants who settled in our great cities and by everyone old enough to remember the Great Depression.

2. The president will declare a state of emergency equal to a major war, following his declaration with symbolic actions equivalent to FDR's bank holiday.

3. The mass media will launch a vigorous campaign designed to create a national spirit equal to the spirit of World War II, our last "good" war.

4. The American Way Administration (a cabinet-level agency) will organize a nation-

wide network of Committees of Correspondence. All adult Americans will belong. Employed people will belong to the committee at their place of work; housewives, househusbands, the unemployed and the retired will serve on apartment-house or neighborhood committees.

5. Universal registration will be assured by drawing on the computerized files of the Social Security Administration and the Internal Revenue Service.

6. Each Committee of Correspondence will consist of several subcommittees of no more than 12 persons each who work in the same shop or live on the same floor or in the same block.

7. Chairpersons elected by each committee and subcommittee will be trained in the dynamics of the encounter group, with particular attention to the hand-to-hand combat of the Synanon "game."

8. Preparation for the American Way will become a central part of the school curriculum.

9. Existing organizations—churches and synagogues, bowling leagues, labor unions, Rotary and Kiwanis, the League of Women Voters, the Sierra Club, the Masons and Odd Fellows, the John Birch Society, the American Medical Association—will be enlisted as powerful adjuncts to the American Way.

10. The target behavior to be changed will be identified by each Committee of Correspondence in response to local conditions but within the scope of guidelines prepared by the American Way Administration.

11. About 10 percent of Americans will become chairpersons, who will belong to regional organizations of their own that ultimately report to the American Way Administration. Eighty percent of the population is expected to accommodate themselves to the American Way with varying degrees of enthusiasm.

12. Incorrigible wasters—probably about 10 percent of the population—will identify themselves by their behavior. Wasters will not be punished by committees or subcommittees. They will be expelled from their committee and subcommittee and their names forwarded to the American Way Administration.

There is no reason anybody should object to the American Way on constitutional or civil-liberties grounds. A nation that has found room for the draft, Prohibition, mandatory Social Security, the closed shop, wage and price controls, gas and food rationing and the income tax clearly has the flexibility to accept the American Way. Any adjustments can be handled by lawyers and bureaucrats.

How will the American Way work on the subcommittee level? Here is a scenario, set in Los Angeles, in which the pattern of the Chinese "study group" has been adapted to American circumstances. If the proceedings seem a little outlandish, recall that at first study groups seemed outlandish to the Chinese, too—but they worked.

Ten people who work for a downtown insurance company are meeting in a conference room, their chairs arranged in a circle. Looking down on them from a poster on the wall is an Arab sheikh in his native costume. His bearded face is hawklike, swarthy, evil. Dark eyes burning with greed peer out from under heavy eyebrows. He has raised a hand heavy with rings. Drops of blood seem to be dripping from his fingertips. On closer examination the blood drops turn out to be tiny, glistening barrels of oil. In the background of the poster, at the foot of a drilling rig, stands a fleet of limousines, crosses between Cadillacs and Mercedes.

Emily Cary, Chairperson of Subcommittee K of Committee of Correspondence 00103406, is an office manager. She is a brisk, neatly made-up person of about 45. She is black—which is to say her skin is an attractive dark gold.

EMILY. Another Monday. Well! Did everybody have a pleasant weekend? (There is a murmur of agreement. Emily addresses a man of about 50, who, judging from his well-cut gray suit and confident manner, is of the executive class.) You enjoyed your weekend, too, Douglas?

DOUGLAS (in an East Coast accent). Yes, indeed. I worked in the garden all day Saturday, setting out tomatoes.

EMILY. Did you get a chance to drive your new car?

DOUGLAS. As a matter of fact, I did. That Honda Minimiser is really quite a remarkable machine. It's not as comfortable as the Mercedes was, but it's quite—uhhh, nimble is the word, I guess. Fifty-five miles to the gallon.

EMILY. We all admire your sacrifice, Douglas. (Her voice becomes ominously quiet.) I regret to have to tell you that you're on the Hot Seat.

Although nobody actually changes chairs, there is a distinct impression that Douglas has been cut off from the rest of the group, who seem to have drawn away from him. The room is quiet. Douglas takes a pack of cigarettes from his pocket.

EMILY (sharply). No smoking!

DOUGLAS (his manner still agreeable). Are you actually lodging an accusation against me, Emily?

EMILY (crisply). You bet! (She picks up a sheet of paper from the table and reads aloud.) Subject was observed driving westward on the Santa Monica Freeway at approximately 3:25 p.m., Sunday, May 8. Subject was alone in car, a new, orange Honda Minimiser, temporary license number 6903765. Subject turned north on the San Diego Freeway. Observer lost subject in traffic between Victory Boulevard and Sherman Way. (Emily puts down the sheet of paper.) Douglas, we are accusing you of an infraction of section 518.2, which, as you well know, forbids operating a car by yourself when alternative public transportation is available. How do you plead?

DOUGLAS (conciliatingly). Nolo contendere, Emily.

EMILY. I suppose you have an explanation. Could we hear it?

DOUGLAS. Actually, I was on my way to visit my mother, who lives in Van Nuys. She's 81 you know, and rather frail. My wife was going to go with me until she developed a headache.

EMILY. Your mother's age and your wife's state of tension hardly seem to have much to do with the case. The point is: why didn't you ride the bus?

DOUGLAS. Come on. Emily, I wouldn't have got there until after dark.

EMILY. Your fear of the dark isn't something in which we have any interest. Did you or did you not waste good American gasoline by driving a car alone while on a personal errand of no particular significance? Did you or did you not help the enemy? (She raises her eyes toward the poster. The skeikh glares back at her.)

DOUGLAS (still trying for the light touch). It was a very small amount of gas. Very small, indeed.

EMILY. Do you think that makes a difference? I'm sure you haven't forgotten what the president said: Saving a billion barrels starts by saving a single drop. Perhaps you thought he was talking about somebody else?

DOUGLAS (flustered). Well, not really. Of course not.

Throats are cleared and there is other evidence of growing tension among the others in the group. They are like piranha that have sensed a single drop of blood from a wounded swimmer upstream.

ARCHIE (a janitor, wearing coveralls, whose rich Queens accent resonates harshly amidst the bland California vowels of the others). I've been meaning to ask you, good buddy, where did you get that necktie?

DOUGLAS (looking down at his tie, which is a deep red, with small figures of dusty gold). Brooks Brothers, as I remember.

ARCHIE (knowingly). Brooks Brothers, is it? I bet that rag cost all of $10.

DOUGLAS (uncomfortably). Twelve-fifty, actually. But, if I may say so, I don't see what you're driving at.

ARCHIE (his eyes widening innocently). You don't see what I'm driving at? Well, I'll tell you what I'm driving at, good buddy. Only weirdos wear red ties.

DOUGLAS (with strained brightness). *Chacun à son goût.* (He realizes this was a serious mistake.) I mean, there's no accounting for taste. (desperately) What on earth does this have to do with anything?

ARCHIE. Weirdos are selfish. Weirdos waste gasoline by going to see their dear old 80-year-old mothers in Van Nuys on Sunday afternoons.

WOMAN'S VOICE. I think we've heard enough about weirdos. Really, Archie!

EMILY (sharply). No Band-Aiding, Stephanie!

DOUGLAS (to Emily). Can we get back to the subject, please?

EMILY (implacably). You're on the Hot Seat, Douglas, and free speech is still honored in this country. Besides, we *are* on the subject.

Now other voices in the group take up the cry one by one, battering Douglas with criticisms, innuendos about his personal life and direct insults. Finally, the leader resumes control of the discussion.

EMILY (cheerfully). All right, people, that's enough. (Douglas looks relieved; but the expression in his eyes reveals a newfound vulnerability, as if, for the first time in his life, he has discovered that he isn't universally admired. Emily smiles at him and continues.) I think everybody here understands why you behave the way you do. You think you're better than the rest of us. You think the rules are made for somebody else. You think that because you make twice as much money as Archie and live in an expensive house and pay $12.50 for neckties that you've somehow lifted yourself above the need to obey. You think you can charm your way out of anything. Perhaps you even think that your mind is better than ours because you went to Harvard or Yale or somewhere. Well, you're wrong. That isn't the American Way. You may have wasted only a comparatively small amount of gasoline but you don't seem to understand that's exactly the same thing as committing a comparatively small murder. Don't you agree?

DOUGLAS (during Emily's speech a tic has begun to work in his eyelid and he has been chewing his lower lip). Yes, Emily.

EMILY (graciously). Good. Now will you please make amends?

DOUGLAS (standing in front of the poster, from which the sheikh glowers malevolently over his shoulder). I recognize that I haven't behaved in the American Way but in a selfish, wasteful way. I freely admit that everything that has been said to me has been said for my own good, for the good of the subcommittee and the Committee of Correspondence, and for the good of the American Way. I apologize to you, Emily, and to you, Stephanie, and you . . .

As he continues, the faces of the subcommittee members lose their hostility and begin to reveal sympathy with Douglas. Even Archie's face visibly softens. Douglas himself looks reborn.

This, of course, is only one scenario among an infinity of possibilities based on billions

of potential infractions to be dealt with by 10 million subcommittees. It is not an entirely pleasant picture nor one that will be easy to accept by those of us who honor the Bill of Rights. Its social consequences will go far beyond the immediate target. Yet, something of the sort will become necessary if we are going to control the minutiae of behavior on which energy conservation depends. Emily is quite right: to condone small offenses is to invite a large disaster.

Our acceptance of the American Way will be made a little easier when we recognize that it will provide many bonuses besides the conservation of energy and resources. It will be particularly useful in the administration of public health. Drug abuse, including cigarette smoking and alcoholism, can at last be wiped out—perhaps even within that legendary 40 days. In spite of the best efforts of our city health departments, the incidence of gonorrhea among our young people is currently skyrocketing. May we not benefit by following the Chinese model? And how about crime in the streets? Who can confidently say that the price will be too high?

Finally, we must start now rather than waiting for the results of studies that will take many years to finish and evaluate. Like the Chinese, we must strike out boldly, experimentally, and not be afraid to make mistakes. Mao Tse-tung once said, "As the struggle will continue to experience ups and downs, we shall have both tense and slack moments during our work and shall have to proceed in a zigzag."

Mr. GARN. Mr. President, now there is one point about this scenario that is particularly frightening. And that is that the Carter administration has, apparently seriously, suggested a mechanism by which this kind of mass pressure could be brought to bear on the formerly free citizens of the United States. That is the proposal for a youth corps of snooping teenagers who would go around to "help" people recognize that they are wasting energy, and to help them learn how to conserve. I have not seen the manual which has already been prepared for these snoops, and I understand the administration is now reluctant to give it much publicity. But I find it disturbing that such a thing would even have been dreamed of, in a society that prides itself on its freedom from coercion. It is, in my opinion, the kind of thing that results from the ideology of no-growth, an ideology with little to recommend it, and everything to fear from it. I ask uanimous consent that a new article from the Washington Post, discussing the youth snoops, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARTER AIDE PROPOSES A PLAN USING YOUTHS AS ENERGY SLEUTHS

(By Ellen Hume)

The Carter administration is considering a plan to use the nation's youth as energy detectives, going from house to house in their communities to check how effectively their neighbors are conserving energy, the Los Angeles Times has learned.

The purpose of the proposed President's youth energy program is "raising awareness and educating the general public on ways that energy can be saved," White House projects director Greg Schneiders said yesterday.

Under the voluntary program, high school students or other youths would start outside a house, checking off energy problems on a government-prepared "survey" list. The volunteer would then knock on the door to tell the occupant his or her outside energy conservation "score" and offer to go through the inside of the house to complete the survey.

According to a proposed "team member's manual," the youths would check everything from the inflation of the homeowner's car tires to the water level in the toilet tanks. It would take 45 minutes to an hour to complete, Schneiders said.

"It's more of a list of tips on how to conserve energy in the home," he said. "The information is not going to be sent anywhere. The thing that I want to avoid obviously is the implication that an army of little uniformed inspectors are going out and checking on people."

Students would be recruited for the program by schools, voluntary organizations such as the Boy Scouts and Girl Scouts, and by radio disc jockeys on rock 'n' roll stations, according to the plan.

Schneiders emphasized that the plan, which is being circulated among educators and volunteer organization executives, might change drastically before it is presented to President Carter at the end of September. If Carter approves it, the plan would go into effect in October.

"It's a very low-key type of operation . . . All the federal government is going to do is announce it and make the materials available," Schneiders said.

A nearly 100-page field manual circulating among educators this week includes not only the checklists and other suggestions, but mottoes for stirring up the enthusiasm of the volunteers.

"There will be a reawakening of our cultural heritage," the manual says. "Be aware that mental and physical health probably will improve if individuals become more self-reliant and less dependent on energy-intensive lifestyles."

Response to the manual has been largely favorable, Schneiders said. But critics have compared it to President Ford's fizzled Whip Inflation Now (WIN) campaign and to "Big Brother" government, he added.

He predicted that political cartoonists might "have a hey day with it."

AWACS FOR IRAN, CONTINUED

Mr. CULVER. Mr. President, on September 7 President Carter resubmitted a congressional notification for the proposed sale of seven E–3A AWACS aircraft to Iran. The President withdrew the original notification for this sale on July 28 when it became clear that the Congress would reject it. Although the President has resubmitted the AWACS notification with a set of assurances designed to meet some of the Congress concerns, the proposal is essentially the same and so are the problems that it poses. As an editorial in this morning's New York Times suggests, the case for selling AWACS to Iran is no stronger that it was last time.

The risks to our own national security posed by the potential for Soviet intelligence activities against the AWACS—a most tempting target—remain a serious concern regardless of whether our extremely sensitive cryptographic systems are excluded from the Iranian aircraft. In fact, the configuration of the Iranian AWACS is the same now as was proposed in July. Coding equipment is not the distinguishing feature of the AWACS. What makes the AWACS "the most revolutionary development in air power since the invention of radar," as the Air Force claims, is the highly advanced look-down radar unit with its built-in electronic countermeasure capabilities and the data processing systems which filter radar input and translate it into useful data. This technology is important for United States and NATO defense forces, and Soviet access to it could be very detrimental.

I also want to endorse the Times statement that one need not question the good faith of the Iranian Government to wonder whether the President's assurance against the offensive use of the AWACS is viable for 30 years into the future. AWACS is as useful in an offensive role as in the defensive air defense function. I would direct the attention of my colleagues to the following assessment of the potent offensive capabilities of the AWACS by the recently retired commander in chief of the U.S. Strategic Air Command, General Dougherty, published in the April/May 1977 edition of NATO's Fifteen Nations:

Some mistakenly think that the AWACS is just an airborne radar antenna. This is only the "tip of the iceberg" of AWACS technology. It has total theater battle management capability—it expands the commander's and the strategist's capability exponentially. The dramatic advance made by American electronic technology . . . makes AWACS one of the true "breakthroughs" of our time.

One of the most troubling aspects of the proposed AWACS sale is that it would extend American involvement in supporting the Iranian Armed Forces. Selling weapons to a nation is one thing; large-scale support for their operations is another problem with fundamental foreign policy consequences.

On August 25 the administration notified the Congress of an additional $800 million in proposed sales to Iran, not for new weapons systems, but for support of previous purchases. In December 1972, the United States sold the Iranian Army 489 helicopters for some $430 million. Now it is proposed that we provide $613 million in technical assistance programs for these helicopters.

Another example of the disturbing degree of U.S. involvement in supporting the Iranian Armed Forces is a $191 million contract signed in November 1976 for American experts to create a logistics command for Iran's air force. In announcing this sale, U.S. defense officials said it was the most ambitious attempt yet to resolve Iran's problems in operating the advanced military aircraft it has been buying. These officials noted that if the air force logistics program is successful, similar programs may be set up for the Iranian Army and Navy.

AWACS is precisely the kind of highly sophisticated weaponry that requires such extensive support. This sale would send an additional 1,200 to 1,600 American technicians and dependents to Iran. Under current plans, they would still be there a decade from now.

The Congress considers foreign military sales on a case-by-case basis. We often forget how extensive our arms sales relationship with Iran is. If the AWACS sale is approved and included in fiscal year 1977 sales, estimated arms sales to Iran this year would be $6.7 billion, out of a record worldwide total of $11.1 billion. These levels compare with a worldwide total of $8.7 billion in fiscal year 1976.

Clearly the time has come to implement President Carter's May 19 policy for restraining foreign military sales. Iran is by far our single biggest customer and will account for about 70 percent of this year's sales. The volume and type of Iranian purchases will have to be cut back if the President's policy is to be more than promises, and we cannot make exemptions for Iran while applying the new restraints to other customers. Given the national security risks and foreign policy problems which are inherent in this particular sale, the President's assurances notwithstanding, the AWACS proposal is an appropriate place for us to draw the line and change to a more discriminate arms sales policy.

Mr. President, I agree with the Times conclusion that if the case for selling AWACS to Iran remains dubious, the case for rushing the sale is more dubious still. When he withdrew the original AWACS proposal, the President stated that he was anxious to give the Members of the House and Senate sufficient time to debate the complex issues of this sale. I intend to carefully review the President's assurances and the study on alternatives to AWACS prepared by the Department of Defense. I am sure that many of my colleagues want to do the same. The important implications of the AWACS proposal demand a full and deliberate review to determine whether it serves the best interests of the United States.

Mr. President, I ask unanimous consent that today's New York Times editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Sept. 9, 1977]

AWACS FOR IRAN, CONTINUED

The case for selling Iran the sophisticated and vastly expensive Airborne Warning and Control System (AWACS)—distended Boeing 707's packed with radar—doesn't seem much stronger than it did the last time the President submitted it to Congress for approval. He withdrew that request a few weeks ago because of Congressional concern that the Iranians might not be able sufficiently to safeguard AWACS' sensitive electronic equipment from falling into Soviet hands, and because of a danger that Iran might be tempted someday to take advantage of AWACS' capability to control offensive military actions.

The Administration now says that the seven AWACS aircraft to be sold to Iran for $1.2 billion would not include some specially sensitive code gear. It also contends that Iran will guarantee that it would use AWACS only for defensive purposes—to provide early warning against air attacks and to control its interceptors. Yet, as Congressional critics observe, cryptographic equipment is only a small part of AWACS' sensitive cargo; the need for protecting against espionage the aircraft's massive radar and data-processing equipment is at least as great. And one need not doubt the good faith of the Iranian Government to wonder whether today's guarantee against the use of AWACS for offensive action might not weaken in the face of some future contingency.

In fairness to the Administration and to the Iranians, it can be argued that there are much worse ways for the Shah to spend an extra $1.2 billion on armaments. Additional combat aircraft, tanks or hovercraft would all seem more threatening to Iran's main rivals in the Persian Gulf, Iraq and Saudi Arabia. Yet the question remains why Iran should spend such a sum at all.

Two persuasive reasons against the Administration's present request remain. One is that the system would require the presence in Iran of many American technicians to train Iranians in its use—and, for some time, even to operate equipment on the aircraft. The United States might thereby find itself dragged farther than it would wish into an Iranian war.

A second argument relates to the Administration's new arms sales policy. The President has pledged that, from now on, each succeeding year's sales will be lower than those of the previous year. Sales for the fiscal year 1977, ending this month, will total some $9.9 billion worldwide, $5.5 billion for Iran alone. Adding AWACS would raise those figures to $11.1 billion—a record total—and $6.7 billion for Iran. The Administration is eager not only to sell AWACS to the Shah, but to do so before Sept. 30, apparently to make just that much easier the task of putting on the brakes in subsequent years. If the case for selling AWACS to Iran remains dubious, the case for rushing the sale is more dubious still.

FOREIGN SURVEILLANCE PREVENTION

Mr. MOYNIHAN. Mr. President, on July 27, 1977, I introduced the Foreign Surveillance Prevention Act, a bill designed to strengthen the ability of the President to deal with the growing threat to the privacy of American citizens posed by the interception of telephone conversations by foreign governments. The legislation is designed to establish clear statutory guidelines for Government action in this area.

Since then, the following Senators have joined as cosponsors of S. 1950, as the bill is designated: the majority leader, Senator ROBERT C. BYRD, and Senators HEINZ, STONE, MELCHER, DOLE, GOLDWATER, HAYAKAWA, INOUYE, CHILES, JACKSON, BROOKE, MATSUNAGA, THURMOND, and RIEGLE.

The American Civil Liberties Union has also expressed its support for the legislation.

Mr. President, I believe the President of the United States wishes to respond to the concerns of those of us who, in cosponsoring S. 1950, are urging upon him a more vigorous response to the blatant Soviet use of electronic technology to violate the fourth amendment rights of Americans. All of us look forward to cooperating with him in devising a remedy for this problem. Indeed, we are given to understand that an administration program is nearing completion.

Finally, Mr. President, Tom Wicker of the New York Times and Karen Keegan of the New Republic have written perceptive commentaries on this question, and I ask unanimous consent that their articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 2, 1977]

SHUTTING OFF SOVIET EARPHONES

(By Tom Wicker)

If an American President were to discover that the Soviet Union was systematically intercepting the telephone calls of millions of Americans, surely it would be good policy and good politics for him to tell the Russians sternly to remove their eavesdropping equipment and maybe even to order a few Soviet diplomats out of the country.

In fact the Russians are doing it, and rather openly, and neither President Carter nor President Ford before him has taken any known steps to protect the rights and privacy of American citizens from Russian snoops. Mr. Ford even had an official report on the matter from a commission headed by his Vice President, Nelson A. Rockefeller, but did nothing.

When the matter was called to Mr. Carter's attention at a recent news conference, he replied mildly that he would "not interpret this [activity] by the Soviet Union or by other embassies to be an act of aggression." Besides, he said, steps had been taken to protect the telephone lines of the White House, the Pentagon and other important agencies.

There are a number of reasons—none of them particularly good ones—why first Mr. Ford, then Mr. Carter preferred to see no evil, hear no evil.

Unquestionably, for one thing, the United States is doing the same kind of eavesdropping in Soviet cities that the Russians are doing in Washington, New York and elsewhere. But in Moscow, the Russians have taken strong electronic countermeasures, possibly even endangering the health of those working in the American Embassy.

It's unlikely, moreover, that American listeners in Moscow hear anywhere near as much as the Soviet's electronic ears in the United States. The Russians are not as pervasively dependent on the telephone or on electronic data transmission as are Americans, and their society is more oriented towards secrecy.

Second, it may well be that Mr. Ford and Mr. Carter have been inhibited by the likelihood that the United States is doing some of the same kind of eavesdropping *in the United States* as the Soviets are doing here. The National Security Agency is empowered to listen in on conversations with one foreign terminus, and while agency officials say this activity is carried on under strict guidelines from the Attorney General, millions of Americans must nevertheless be overheard in innocent conversations. The Senate Intelligence Committee is looking into the possibility of bringing such eavesdropping under legislative control.

Maybe Mr. Carter also believes that if White House and Pentagon phones are protected, there's no need to do anything else. But there is, for at least two reasons. An American's rights and privacy should no more be invaded by Russian snoopers than by the F.B.I. or the C.I.A.; and while there's no known case of Russian blackmail, it's not hard to imagine circumstances in which that tactic might be used against American citizens.

Aside from privacy, however, electronic telephone intercepts by the Russians in a financial capital like New York or, say, of grain crop reports coming into the Agricul-

ture Department, could give them valuable advance and inside information on a wide variety of subjects other than "national security" questions.

But probably the major reason for American acquiescence in Russian eavesdropping here is Russian-American relations. The Ford Administration apparently feared to make an issue of the matter, despite the Rockefeller report, lest its détente policy be damaged. Mr. Carter, having offended the Russians with his human rights statements and been rebuffed by them on arms control, can hardly be anxious to inject another sour note into the resulting shaky relationship.

There may be some merit in such caution, but it still means that the right of Americans to be secure in their houses and places of work is being sacrificed to diplomatic expedience. Therefore, Senator Daniel P. Moynihan of New York has introduced a bill that would put Mr. Carter in a stronger position to enforce the law and the Constitution.

The measure would require the President to inform citizens when he had grounds to believe they were eavesdrop victims of any foreign country, to request the responsible foreign officials to stop the eavesdropping, and to order them out of the country if they persisted in the offense.

Undoubtedly, the President already has such authority somewhere in his constitutional powers; but to endorse that authority in specific legislation would notify the Russians that the United States was placing new importance on the issue. And it would allow Mr. Carter to take steps to halt—or at least reduce—Russian eavesdropping, not as an Administration policy the Kremlin could take as another affront but as a necessity imposed on him by Congress.

[From the New Republic, Aug. 6 and 13, 1977]

DIAL R FOR RUSSIANS—BUGS IN THE SYSTEM

With all the attention in recent years focused on bugging of American citizens by their own government, it is puzzling that Senator Daniel Patrick Moynihan's charges of massive Soviet interception of US phone calls have been virtually ignored. Moynihan, a member of the Senate Select Committee on Intelligence, warns that the Soviet Union is tapping the telephones of "literally millions" of American citizens. "It must be made clear," he says, "that Soviet espionage has not been directed merely against government activities. It has involved the wholesale invasion of the privacy of individuals, private businesses, stock exchanges, commodity exchanges, national and international banking—and, for all we know, the press, the universities, and similar centers of information and exchange throughout the nation." Asked to substantiate this vast claim, Moynihan said, "It's a world of conjecture. You can monitor thousands of calls with the technology they have. . . . There is no way to know" who exactly is being monitored. But the government does know. It has grudgingly admitted how widespread the practice is. Yet it seems unflappably reluctant to try to have the practice stopped.

The Soviets are able to intercept phone calls within the US because 68 percent of US long distance calls are transmitted through microwaves, a more modern but also more vulnerable system than telephone cables. Microwaves are high frequency radio signals that are relayed by towers all over the country. An eavesdropper, using sophisticated equipment, can "pluck" phone calls from the air and find sensitive information in them by computer sorting. Since microwaves are point-to-point transmissions, they can only be intercepted by a station near where the call is made. Apparently the Soviets have interception machinery perched atop their Washington embassy, their United Nations offices in New York, their residences on Long Island, in the Bronx and in Maryland, and at their consulates in San Francisco and Chicago. The new Soviet embassy on which construction will begin shortly at Washington's Mt. Alto will allow the Russians to increase their bugging capacity.

The government has known, in fact, for at least two years that American phone calls are being monitored by Soviet interception equipment. President Ford never made the issue public; instead a National Security Council committee was asked to study the problem. Carter also has avoided public debate on the subject, although he has admitted under questioning that "the intercept on a passive basis of these kinds of transmissions has become a common ability for nations to pursue." He told a few senators that the Washingtotn Post has been exercising discretion on the issue. It is known that for several months, at least, the Post's Bob Woodward has sat on the story. Continuing along the Ford line, President Carter set up his own interdepartmental study of Soviet eavesdropping. Recommendations from that committee are expected soon, and probably will concern themselves with securing government phone calls rather than those in the private sector. The President has already assured the press that his lines and Dr. Brzezinski's are adequately covered. That's not really the point, however. We can assume that the security apparatus protects itself. But who protects us? Neither the White House nor any of the departments involved in Carter's special coordinating committee of the National Security Council had any comment to make about the completion date of the study or what its recommendations would be.

In the meantime, the Carter administration seems to have found a convenient compromise with principle. Without making public the continuous Soviet intrusions on private US citizens, the government has informed those large corporations it knows are under surveillance.

The secrecy in which Soviet wiretapping has been shrouded is an indication of the difficult position the Carter administration faces. On the one hand, if the President does not make it clear that he is concerned about Soviet violation of American privacy, he is liable to take a beating from those who are understandably upset about it. On the other hand, if he does make a public disclosure of Soviet activities, he will also have to admit that similar activities are carried on by American intelligence agencies. Such information could jeopardize further American eavesdropping and other surveillance activities.

Ironically, the fourth amendment's guarantee against unreasonable searches and seizures protects us against bugging by our own government, but not specifically against bugging by foreign governments. The CIA general counsel made the distinction to justify withholding this information from the public. It is a particularly narrow interpretation of the Constitution that encourages official indifference to the systematic violation of what are thought of in this country as natural rights.

The irony, of course, is that if freedom from bugging by foreign governments is a "natural right," it is one Soviet citizens are entitled to as well and one we apparently violate. But a unilateral American decision to honor the "right" of Soviet citizens to be free from bugging would be a pointless gesture, since it is a right their own government ignores as a matter of course. Clearly this mutual bugging is a problem more amenable to a pragmatic tradeoff than to abstract invocation of "rights." President Carter should tell the American people exactly what he knows about Russian interception of our telephone calls. Then he should arrange to sit down with the Russians and negotiate an end to the practice, preferably in both countries.

—KAREN KEEGAN.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Ronald E. Angel, of Georgia, to be U.S. marshal for the northern district of Georgia for the term of 4 years, vice James H. Henson.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Friday, September 16, 1977, any representations or objections they wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

TRIBUTE TO THE LATE E. F. SCHUMACHER, AUTHOR OF "SMALL IS BEAUTIFUL"

Mr. PERCY. Mr. President, it is with a great deal of sadness and a sense of loss for myself, my son Mark—who was a great admirer and personal friend—and others of the untimely death of E. F. Schumacher. He was a great thinker within the tradition of organic and decentralist economics and the author of "Small Is Beautiful," an extremely influential and inspirational book.

Mr. Schumacher can be largely credited with founding the appropriate technology movement. His approach has now been appreciated and adopted in the highest level of government. The President's national energy plan advocates and seeks to bolster "soft" technology, one of the primary thrusts of Mr. Schumacher's ideas.

E. F. Schumacher was a pioneer in the movement to "think small," particularly as it applies to energy technology. The prevailing theme of "Small Is Beautiful" is that small technology makes sense from an economic as well as an environmental and political standpoint. According to Mr. Schumacher, technological planners tend to think that remedies for all problems lie with large-scale solutions—irrigation projects, atomic plants, giant utility companies—whereas in fact, it may be both an environmentally and politically sounder policy to make technology readily accessible to, and controllable by, local communities and individuals. When solar, wind, biomass, and other small technologies become commonplace substitutes for our depleted fossil fuels, E. F. Schumacher should garner the credit for showing us the way. His charm, grace, and wonderful sense of humor shall always enrich the lives of those of us privileged to know him.

SUPPORT FOR BERT LANCE

Mr. HAYAKAWA. Mr. President, I find it very troubling that the media have

taken upon themselves—for some 3 months now—the role of judge and jury of Budget Director Bert Lance. Literally thousands of words, under front page headlines, have been written about Mr. Lance. Yet, Mr. Lance has not been accused of any crime by any court in this land. It is incredible to me that he should be made the target of such an assault by the newspapers, radio, and television.

On Monday of this week, before the Senate resumed session, I discussed my feeling about this situation with the media in San Francisco. I issued a statement at that time. I would like to share my thoughts with my colleagues in the Senate also, and I ask unanimous consent that my statement be printed in the RECORD. I believe syndicated columnists Evans and Novak, in this morning's Washington Post, very directly addressed this matter. I ask also unanimous consent that their thoughtful column be printed in the RECORD.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR S. I. HAYAKAWA

I don't know much about Bert Lance. I don't know much about banking. But I think I know something about friendship.

It seems to me that Mr. Lance accepted appointment as Director of the Office of Management and Budget for one reason above all others. His friend Jimmy Carter had been elected President of the United States. He did what I hope you and I would do if the President had been an old friend of ours and had asked for help. "Of course I'll help," Mr. Lance must have said.

I am sure Mr. Lance gave up a lot to accept his appointment as Budget Director. His salary must be much less than he was able to earn as a bank president and private businessman. Is anyone suggesting that he is using his office in order to advance his private fortunes? Of course not.

Furthermore Mr. Lance gave up a stable business life and a respected position in the city of Atlanta for the hectic job of national fiscal policy-maker, where he is necessarily always at the center of a storm.

Most importantly, Mr. Lance gave up his private life to place himself at the mercy not only of rivals and critics in government, but more significantly at the mercy of the media. Those commentators and critics who are determined to give him a bad time, finding insufficient evidence with which to bring him down, are busily cutting him to pieces with innuendoes.

If Mr. Lance is being accused of serious wrongdoing, let us by all means have an orderly investigation into the charges at once. But so far the worst that has been said of him is that some of his activities raise "unresolved questions. . . as to what constitutes acceptable banking practice"—as if every profession were not full of "unresolved questions" that can only be resolved, as they arise from day to day, on the basis of judgment and experience.

Perhaps President Carter, by talking too loftily about how completely above suspicion his administration was going to be, has only himself to blame for Mr. Lance's present troubles. But enough is enough. Let's leave Mr. Lance alone now and let him get on with his important business, which is to serve the nation by helping, as best he can, his good friend Jimmy Carter.

I am impelled to make these remarks not out of any personal interest in Mr. Lance, whom I have never met and whom I had never heard of until recent months. What I am concerned about is that right now, as this trial by media goes on, thousands of successful and public-minded men and women, fearing the attacks they will be subject to if they are appointed or elected to a position of responsibility, are saying to themselves, "No public office for me!"

Thus are able men and women of proven capacity and leadership in the professions, in business, or in community service discouraged from participating in public life, discouraged from running for office.

Soon we shall have no one left in government but the timid, who will rise to high office not by originality or boldness or creativity, but by slavish adherence to the rulebook, by being sure to offend nobody, and by acquiring seniority. We shall have assured ourselves government by the mediocre. Is this the way we want to go?

A BUDGET DIRECTOR BEYOND SALVATION

(By Rowland Evans and Robert Novak)

The underlying reality of the Lance affair is betrayed by this reaction of members of the Senate Governmental Affairs Committee to Tuesday's briefing from staff investigators. They were unimpressed by the evidence but thoroughly convinced Lance is finished as budget director.

Although dominating front pages and national news programs by bringing "new" allegations against Lance to the White House on Labor Day, the committee's chairman and ranking Republican—Sens. Abraham Ribicoff and Charles Percy—had little to show their colleagues the next day. But while many senators remain dubious that Lance is guilty of any crime, all consider him beyond salvation. The Ribicoff-Percy operation, combined with the media barrage, destroyed what shadow of hope remained that Lance might yet regain his effectiveness as "deputy President."

Lance has been destroyed by pyramiding suggestions of wrongdoing without the hint of a trial. This suggests totalitarian-style justice or perhaps a throwback to an early American form. "This is Salem," one White House insider has been telling his colleagues all week, "and we burn a witch a year."

Beyond the catastrophe to Lance's personal life and the damaging political impact on President Carter, this ensures severe difficulties ahead for conducting the federal government's business. Except for professional bureaucrats or college professors, can anyone come to "Salem" without the risk of becoming the next "witch"?

The process is shown in the role of Chairman Ribicoff, long noted as one of the nation's shrewdest politicians. Having defended Lance and attacked a media "smear" job against him only weeks ago, Ribicoff found himself in unusual country; opposing the liberal establishment. He purged himself abruptly with the dramatic holiday visit Monday to the White House, where he and Percy publicly implied grave new developments against Lance.

All that was new in their private report to the President, however, was a Republican staff investigator's interview in a Georgia prison. The prisoner, a bank embezzler, made unsworn and untranscribed accusations against Lance. Otherwise, the two senators rehashed newspaper stories (concentrating on Lance's questionable use of his bank's airplane) and informed the President that Lance's usefulness was no more.

Nor was the committee staff's report on Lance, given behind closed doors to the Governmental Affairs Committee, any more impressive. "It was pretty superficial stuff," one Democratic senator told us. "It was the kind of stuff a good lawyer on cross-examination could make mincemeat of." Another Democratic committee member said the presentation "certainly contained no grounds for prosecution."

Several senators accused the staff of "irresponsibility for interviewing a convict—notoriously sources of self-serving misinformation—and permitting that information to leak into the press. Sen. Sam Nunn of Georgia informed his fellow committee members that the convict's lawyer was outraged by the incident and wanted to rebut his former client's accusations (providing he could get bar association clearance).

The committee agreed only by an eyelash to give Lance himself a chance to testify. It voted by only 7 to 6 not to postpone Lance's Sept. 15 testimony for weeks while presenting evidence against him. Having shifted sides with a vengeance, Ribicoff sided with most committee Republicans to delay Lance's appearance.

If Ribicoff had won, days of testimony would have built pressure for Lance's resignation, probably forcing him to quit before testifying. Even so, nobody on the committee gives Lance any hope of survival with or without early testimony. What is critical here is atmosphere, not facts. "I'd hate to be tried in a court of law like this," one committee member told us.

Lance's principal sin is described in nearly identical terms by a Senate defender as being a "man-on-the-go" and by a critic inside the administration as being a "go-go banker." In a dull summer, this was clear violation of post-Watergate morality as defined by candidate Jimmy Carter. The media campaign was certainly not opposed by a banking-business establishment, which not only tends to view Lance's corner-cutting as the way of the parvenu but also fears an antibanker ruboff.

So much stress was put on improper use of Lance's bank-owned plane in the Ribicoff-Percy presentation to the President and in the staff presentation to the committee that senators fear businessmen who fly their company planes will steer clear of service in Washington. If so, the first criterion in finding a successor to Lance will be an absence of business experience. For Jimmy Carter—and the county—that means trouble.

UNANIMOUS-CONSENT AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at such time as the bill (S. 1750), Calendar Order No. 341, the so-called saccharin bill, is called up and made the pending business before the Senate, there be a time limitation agreement thereon of 4 hours, to be equally divided between and controlled by the Senator from Massachusetts (Mr. KENNEDY) and the Senator from Pennsylvania (Mr. SCHWEIKER), with a limitation of 2 hours on any amendment in the first degree; a limitation of 30 minutes on any amendment to an amendment; and a limitation of 20 minutes on any debatable motion, appeal, or point of order, if such is submitted to the Senate; and that the agreement be in the usual form.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The text of the unanimous-consent agreement is as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That when the Senate proceeds to the consideration of S. 1750 (Order No. 341), the so-called Saccharin Study, Labeling, and Advertising Act, debate on any amendment

in the first degree shall be limited to 2 hours, to be equally divided and controlled by the mover of such and the manager of the bill; debate on any amendment in the second degree shall be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the bill; and debate on any debatable motion, appeal, or point of order which is submitted or on which the Chair entertains debate shall be limited to 20 minutes, to be equally divided and controlled by the mover of such and the manager of the bill: *Provided*, That in the event the manager of the bill is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or his designee: *Provided further*, That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of final passage of the said bill, debate shall be limited to 4 hours, to be equally divided and controlled, respectively, by the Senator from Massachusetts (Mr. KENNEDY) and the Senator from Pennsylvania (Mr. SCHWEIKER): *Provided*, That the said Senators, or any one of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, debatable motion, appeal, or point of order.

UNANIMOUS-CONSENT AGREEMENT—S. 2057

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when S. 2057, the National Energy Conservation Policy Act, has been advanced to third reading, the manager of that bill be authorized to proceed, without debate or intervening motion, point of order or appeal, to a House bill agreed to by both of the leaders, including, if necessary, discharge from committee, and that the manager of the bill be authorized to add to that bill amendments adding the text of S. 2057, as amended, if amended, S. 701 as passed by the Senate, and the pertinent text of H.R. 8444 which deals with the same subject matter as S. 2057 and S. 701, all without intervening debate, motions, further amendments, points of order or appeals, and that the House measure thus amended be immediately advanced to third reading and passed, without any further intervening action and a motion to reconsider the passage of that measure being laid on the table.

Mr. BAKER. Mr. President, reserving the right to object, and I shall not object, I concur with the request made by the majority leader rather than object to it. I recall, however, that the procedure previously utilized also included the discharge of the Committee on Finance from further consideration of a particular bill. I would inquire if there is a bill available, or if it is anticipated that some bill will be available for this purpose in this situation, do we know what that is going to be at this time?

Mr. ROBERT C. BYRD. At the moment I do not know. I think the minority leader has raised a pertinent question. Under the order whatever House bill may be available at that time or made available, which, in the judgment of the manager of the bill, the ranking member, and the joint leadership would accommodate the purposes that we have in mind, which were accommodated in a similar manner on yesterday, would be utilized.

Mr. BAKER. Mr. President, I thank the majority leader. I agree that this is a good procedure. The language of the request then would cover the necessary steps to make available such a measure. I will assure the majority leader I will cooperate to try to see that an appropriate vehicle is made available for that purpose. I have no objection, Mr. President.

The PRESIDING OFFICER. Without objection, it will include discharging the committee.

Mr. ROBERT C. BYRD. From an appropriate vehicle jointly agreed upon by the majority and minority leaders.

The PRESIDING OFFICER. The Senator is correct.

Mr. ROBERT C. BYRD. I thank the Presiding Officer.

I would address a question to the Parliamentarian through the Chair. Is there any difficulty in the implementation of such an order by virtue of the way it was phrased today?

The PRESIDING OFFICER. The Chair and the Parliamentarian fully understand the intent of the majority and minority leaders.

Mr. ROBERT C. BYRD. I thank the Chair.

The PRESIDING OFFICER. Is there objection? The Chair hears none. It is so ordered.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business?

There being no further morning business, morning business is closed.

PENDING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, what is the pending business now?

The PRESIDING OFFICER. The pending business before the Senate is the consideration of S. 2057.

Mr. ROBERT C. BYRD. I thank the Chair.

ORDER FOR ADJOURNMENT UNTIL 12:30 P.M. ON MONDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until the hour of 12:30 p.m. on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

DESIGNATION OF PERIOD FOR ROUTINE MORNING BUSINESS ON MONDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Monday, after the two leaders or their designees have been recognized under the standing order, there be a brief period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER TO TAKE UP THE PENDING BUSINESS ON MONDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Monday after the two leaders have been recognized under the standing order, and the order for the recognition of Mr. BARTLETT for 15 minutes has been consummated, the Senate resume the consideration of the then unfinished business, the energy conservation bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, will the majority leader yield to me?

Mr. ROBERT C. BYRD. I yield.

Mr. BAKER. I understand we are to come in at 12:30 on Monday.

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. Can the majority leader share with me any estimates on how late we may go on Monday?

Mr. ROBERT C. BYRD. I am glad the distinguished minority leader asked the question.

ORDER THAT NO ROLLCALL VOTES OCCUR PRIOR TO 2 P.M. OR SUBSEQUENT TO 5:45 P.M., MONDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, by way of answering the inquiry, that on Monday no rollcall votes occur before the hour of 2 p.m., with the single exception of any rollcall vote that may be in connection with the assembling of a quorum, and that no rollcall votes occur after 5:45 p.m. on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the majority leader.

PROGRAM

Mr. ROBERT C. BYRD. I will say further to the distinguished minority leader, I think the Senate should be able to complete its work on Monday by 6 p.m. or very shortly thereafter.

I would anticipate longer sessions during the remainder of the week, Tuesday, Wednesday, Thursday, and Friday. The Senate will continue its work on the energy conservation bill on Monday. During the week, in addition to that bill, in view of the fact that no other energy bill will be immediately ready for Senate action upon the disposition of the energy conservation bill, as it would now appear, I should think that the Senate, at some point during next week, would take up the bill dealing with nonunionization of the military, S. 274. I should think that other likely candidates from time to time would be the timber sales bill, S. 1360; the civil rights bill dealing with sex discrimination, S. 995; the saccharin bill, S. 1750, and conference reports and other measures which have been cleared for action, as long as the Senate is awaiting another energy bill.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT TO 12:30 P.M., MONDAY, SEPTEMBER 12, 1977

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until the hour of 12:30 p.m. on Monday next.

The motion was agreed to; and, at 6:30 p.m., the Senate adjourned until Monday, September 12, 1977, at 12:30 p.m.

NOMINATIONS

Executive nominations received by the Senate September 9, 1977:

DEPARTMENT OF JUSTICE

Ronald L. Rencher, of Utah, to be U.S. attorney for the district of Utah for the term of 4 years, vice Ramon M. Child.

Edward L. Shaheen, of Louisiana, to be U.S. attorney for the western district of Louisiana for the term of 4 years, vice Donald E. Walter, resigned.

M. Karl Shurtliff, of Idaho, to be U.S. attorney for the district of Idaho for the term of 4 years, vice Sidney E. Smith, resigned.

Ralph C. Bishop, of Alabama, to be U.S. marshal for the northern district of Alabama for the term of 4 years, vice Johnny M. Towns.

William L. Brown, of Wisconsin, to be U.S. marshal for the eastern district of Wisconsin for the term of 4 years, vice Raymond J. Howard.

Rex O. Presley, of Oklahoma, to be U.S. marshal for the eastern district of Oklahoma for the term of 4 years, vice Laurence C. Beard

Anton T. Skoro, of Idaho, to be U.S. marshal for the district of Idaho for the term of 4 years, vice Rex Walters, resigned.

Roy A. Smith, of Ohio, to be U.S. marshal for the southern district of Ohio for the term of 4 years, vice Elmer J. Reis, resigned.

CALIFORNIA DEBRIS COMMISSION

Col. Donald Michael O'Shei, Corps of Engineers, to be a member of the California Debris Commission, under the provisions of section 1 of the act of Congress approved 1 March 1893 (27 Stat. 507) (33 U.S.C. 661), vice Col. Frederick G. Rockwell, Jr., retired.

INTERNATIONAL ATOMIC ENERGY CONFERENCE REPRESENTATIVE

Robert S. Rochlin, of Maryland, to be an Alternate Representative of the United States of America to the Twenty-first Session of the General Conference of the International Atomic Energy Agency.

EXTENSIONS OF REMARKS

"LET THE ALIENS IN"—A POINT OF VIEW

HON. ROBERT W. EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. EDGAR. Mr. Speaker, the issue of what national policy should be with respect to illegal aliens is one which we will focus upon during the 95th Congress. An article by Stephen Chapman, which appeared in the July/August 1977 edition of the Washington Monthly delves into this controversial issue to a degree which should be reviewed by our colleagues. For this reason, I wish to share it with House Members who will have to make some difficult decisions which will have a profound effect upon human lives:

LET THE ALIENS IN

(By Stephen Chapman)

Oddly for a nation built almost entirely on immigration, the United States historically has had a schizophrenic attitude about letting in foreigners. For our first century-and-a-half of existence, we welcomed almost anyone who wanted to come, and the invitation was accepted by millions of people all over the world. Until 1882, in fact, the U.S. had no formal immigration policy, and for the next 39 years it didn't limit the number of immigrants. Only in 1921 did the government decide to close the open door to some foreigners, mainly those from southern and eastern Europe, who were arriving in sufficient numbers to cause grave alarm among the nation's governing WASPs. One congressional report expressed the worry that the immigration of such people tended "to upset our balance of numbers, to depress our standard of living, and to unduly charge our institutions for the care of the socially inadequate." Evidently the threat to the purity of the Anglo-Saxon race was too obvious to mention.

Nobly trying to avoid these disasters, Congress established immigration quotas based on the ethnic makeup of the American public, letting in a lot of northern Europeans, a few southern and eastern ones, and only a handful of Asians. As the above congressional report subtly explained it, if "the principles of individual liberty . . . [are] to endure, the basic strain of our population must be maintained and our economic standards preserved."

With only a few changes, the quotas lasted until 1965, when Congress passed a new Immigration and Nationality Act that was aimed principally at reuniting families, admitting needed workers, and granting sanctuary to political refugees from Communist countries and the Middle East. Aliens who didn't fit into these categories simply were not to be admitted. Disturbed by the arrival of 160,000 immigrants a year from the Western Hemisphere (almost all from Latin America), Congress placed a quota on them of 120,000 a year—the first time in our history it had placed a numerical limit on Latin immigrants. Congress presumably shared the sentiments of the cynic who scorned President McKinley's professions of affection for "our little brown-skinned brothers": "They may be related to President McKinley, but they're not related to me."

Heedless of the chilly welcome, a lot of our neighbors still want to come, with the main consequence of the 1965 ceiling being a "silent invasion" of illegal aliens that has unnerved many observers to the point of near-hysteria. Though the invasion has been silent, the reaction to it has been very noisy. A good deal of frightened talk is aloof about how to save ourselves from being drowned in this "brown tide" of illegal aliens, most of it boiling down to one simple idea: get them out and keep them out.

Such talk in Congress and the White House is nothing if not popular. A gallup poll last year discovered that 74 percent of Americans regard illegal aliens as a "very serious" or "fairly serious" national problem, with 82 percent blaming at least one of our social ills on their presence. Most revealing of all, 57 percent of those polled agreed with the unequivocal declaration, "Illegal aliens should be rounded up and sent back to where they came from." Gallup likely could have found a majority in favor of melting down the Statue of Liberty and selling it for scrap, perhaps replacing it with a giant replica of a snarling Doberman Pinscher to underscore the point.

That the drawbridge to the golden door is now in danger of being pulled up is due mostly to the vigorous xenophobia of former Marine Corps commandant General Leonard Chapman, who retired in January after four years as commissioner of the Immigration and Naturalization Service. When in 1973 he assumed control of a small, little-noticed agency demoralized by scandals and the impossible job of keeping out illegal aliens, Chapman took the offensive, warning publicly of an impending "national catastrophe" and publishing inflammatory magazine articles with titles like "Illegal Aliens: Time to Call a Halt!" According to Charles Keeley, a sociology professor at Fordham University, "Chapman was a master at defining the issues for the purpose of increasing his budget. By very skillful manipulation of the press, he created a crisis mentality, which perfectly fit his agency's bureaucratic needs." In addition to valuable support from such interest groups as the AFL–CIO, the American Legion, and Zero Population Growth, Chapman's campaign was favored by circumstance, coming at a time of severe economic troubles; and the accident that most illegal aliens have brown skin didn't hurt his efforts either.

It's no surprise that the public concern about illegal aliens has been fostered by a government agency less interested in the public than in more power, greater prestige, and a bigger budget; that, after all, is how things usually work in Washington. What is more disquieting is that the perception of a crisis has grown out of confused thinking that rests on questionable premises, unsubstantiated statistics, and groundless myths. It's also disturbing that the issue so easily raised a public clamor in a nation of liberal traditions incompatible with xenophobic hyperbole.

Most of our fears about illegal aliens are without foundation and the conclusions drawn from them, however popular, are thus mistaken. Instead of talking about throwing out all our illegal aliens and doing our damnedest to make sure they don't come back, we ought to be taking precisely the opposite tack and legalizing the status of illegal aliens already here, while eliminating the numerical quotas on immigration from the Western Hemisphere.

TRAINING THE MULE

Chapman's public relations techniques in his campaign were reminiscent of the farmer who began his mule's training by clubbing him over the head to get his attention; his weapon was the untiring repetition of huge numbers. In one congressional hearing he placed the number of illegal aliens at four to five million, but when asked about the basis of his estimate, Chapman replied, "It is just a midpoint between the two extremes. I have heard one or two million at one end of the scale and eight or ten million at the other. So I am selecting a midpoint . . . just a guess, that is all. No-

body knows." An immigration and Naturalization Service-commissioned study by Lesko Associates, a Washington consulting firm, had little success in narrowing the wide range of estimates. It guessed there were about 8.2 million illegal aliens in the U.S., but such experts as Wayne Cornelius, an assistant professor of political science at MIT and a longtime student of the subject, have criticized Lesko's estimate as much too high and its methods as scientifically dubious.

The only hard numbers available are statistics on INS apprehensions. In 1975, for instance, the agency caught and deported 766,600 illegal aliens—but using that figure as a basis for estimating a total number, as INS does, is questionable at best. Since many aliens are apprehended more than once, the number of aliens who are caught is probably quite a bit lower than the total apprehensions. One Border Patrol officer tells of apprehending and deporting a single Mexican five times in one night. As General Chapman admitted, no one knows how many illegal aliens there are in the U.S., and there is probably no way of finding out.

That hasn't stopped Chapman and his allies from using their unreliable estimates as the basis of even more unreliable calculations of how much illegal aliens cost the government. According to their line of reasoning, aliens impose a burden on taxpaying Americans by using public services, welfare benefits, and food stamps—all for free, since they don't pay taxes. Factual support for this argument is conspicuously absent, no doubt because what concrete evidence there is discredits the theory. In fact, most employers deduct both income and FICA taxes from the paychecks of their illegal workers, partly because they don't always know which ones are illegal and partly because they fear problems with the IRS and the Social Security Administration. At the same time, illegal workers tend to avoid any contact with government agencies, even those that might provide help, out of fear of being caught. A Department of Labor study by David North and Marion Houstoun last year reported:

"This group of illegal alien workers were significantly more likely to have participated in tax-paying systems (many of which are automatic) than to have used tax-supported programs . . . while 77 per cent of the study group reported that they had had social security taxes and 73 per cent reported that they had federal income taxes withheld. Only 27 per cent used hospitals or clinics, four per cent collected one or more weeks of unemployment insurance, four per cent had children in U.S. schools, one per cent participated in U.S.-funded job-training programs, one per cent secured food stamps, and 0.5 per cent secured welfare payments."

A recent study by the San Diego County Human Resources Agency arrived at similar conclusions, estimating the county's annual cost in social services to illegal aliens at $2 million and the aliens' yearly contribution in taxes at more than $48 million. The reality, then, is just the opposite of the myth spread by Chapman and his ilk: illegal aliens contribute more than their fair share to government revenues and receive far less than their share of state and federal benefits. The General no doubt would be chagrined to learn that instead of aliens being a burden to the rest of us, it's the rest of us who are a burden to the aliens.

UNFAIR COMPETITION

At the heart of organized labor's demands for measures to stop the influx of foreigners is the notion that they compete unfairly with American workers, displacing Americans from their jobs and depressing the general level of wages. Labor thinks a lot of our economic ailments would vanish if only the illegal aliens would. Chapman has gone so far as to argue that deporting all our illegal aliens would cut the unemployment rate in half.

Wayne Cornelius dismisses this belief as a "cruel illusion," and there is in fact little to support it. Many of the jobs held by illegal aliens are the kind that few Americans would accept, regardless of their skills. A California businessman who hires illegals told New West magazine, "If you pulled out every illegal alien in Los Angeles at midnight tonight, you would wake up tomorrow morning in a town without busboys, maids, or parking-lot attendants." North and Houstoun reported that most of their respondents worked as laborers (including farmworkers), service workers, and other semi-skilled or unskilled workers. Most of the aliens they surveyed were paid little more than the minimum wage, with some receiving even less than that. Like the North-Houstoun study, the San Diego report expressed doubt that aliens displace American workers, noting one instance in which the State Human Resources Agency could not fill 2,154 jobs made available by the deportation of illegal workers, a failure it blamed on the jobs' low wages, poor prestige, and long hours. San Diego, despite its 11.8-percent unemployment rate, had a similar experience: when some 340 jobs were vacated by illegal aliens, INS was unable to fill them with Americans and finally let the employers hire commuter workers from Mexico. North and Houstoun also concluded that ilegal aliens neither compete with skilled American workers nor depress wages. Eliot Abrahams, an aide to Senator Daniel Patrick Moynihan, says flatly, "There's no evidence that the average alien depresses wages. Aliens either get good wages or they get low pay for jobs no one else will take."

The aliens don't make much difference to unemployment because unskilled Americans understandably prefer subsisting on welfare or unemployment payments to working long hours at low-paying drudgery. The low unemployment rate in Texas is largely a consequence of the state's stingy assistance to the poor. Conversely, the high unemployment rates in cities like New York and Chicago, where aliens are believed to flock, is probably due far less to the aliens than to the generally stagnant economic conditions in the industrial Northeast and the attractiveness of the relatively high welfare and unemployment benefits in such cities, which are enough to make any unskilled worker think twice about working for a living.

It will be argued that if illegal aliens are given legal status, they will likewise choose relief benefits over low-paying jobs, but the evidence suggests otherwise. Aliens, like most immigrants, generally appear eager to accept work of any kind because of the social stigma they attach to not working, the improvement it represents over jobs in their native countries, and the hope of advancement. "Apart from any consideration of their illegal status," said North and Houstoun, "they appear to be like immigrant workers: highly motivated and hard-working employees, whom U.S. employers regard as very productive workers, despite the fact that many do not speak English."

THE WELFARE OF THE CUBANS

The American experience with immigrants from Cuba during the 1960s implies that aliens do not come to the U.S. to sit back and collect welfare checks. When hundreds of thousands of Cuban refugees poured into Miami in the decade following Castro's revolution, many Miamians feared they would swell the relief rolls. Contrary to popular belief, few of the Cubans were wealthy, and even those who were arrived almost penniless. According to Susan Jacoby, who has written extensively about aliens in the U.S., "By 1962, small businessmen, technicians, clerical workers, and urban factory workers were arriving by the thousands." Now, Jacoby says, "Miami is filled with small businessmen who were blue-collar workers in Cuba." Despite a special federal welfare program for them, the Cubans wasted no time in finding jobs, however menial; by 1974 only 10 per cent were on the welfare rolls, most of them elderly people. And the hard work has paid off: Jacoby notes that the "median income of Cuban families rose from $5,244 in 1967 to $8,091 in 1970." Not only that, but local officials say the Cubans have created at least 100,000 jobs since they arrived.

The case of the Vietnamese refugees is less encouraging, but the presence of many of them on welfare rolls appears due partly to the unique circumstaces of their immigration and our efforts at settling them in American society. The Vietnamese emigrated to the United States with little preparation and no real purpose besides escaping what they expected would be a very unpleasant fate. Coming from an Eastern society, they faced greater cultural and linguistic barriers than did the Cubans or other immigrants from Latin America.

But the blame for nearly a third ending up receiving welfare payments lies mostly on the federal government. "The government leaned overboard in making assistance available to the Vietnamese, without making them understand that collecting welfare is not the normal way of life here," says Leon Marion, Executive Director of the American Council of Voluntary Agencies for Foreign Service. "These people didn't learn how to operate in our culture, and didn't realize that everyone is supposed to work for a living. Putting them on welfare was a simple solution to a very complex problem." But the majority of the Vietnamese here have barely been in this country two years, and Marion sees their swelling of the welfare rolls as a short-run problem that will correct itself in time. "More Vietnamese are going to resettlement agencies for help in finding gainful employment, and they turn out to be hard, earnest workers," he says. "They give an employer his money's worth." The problem of a temporary swelling of the welfare rolls is one we have to face, but experience shows that it is only temporary. Other refugees from Communism than the Vietnamese, like the Hungarians and the aforementioned Cubans, are no longer dependent on welfare.

It's foolish to pretend that open immigration will be completely free of problems, but most of them seem easily surmountable. For instance, we can count on the greed of the American Bar and Medical Associations to safeguard against the brain drain from underdeveloped countries that open immigration might cause.

THE FIXED PIE

The vaguest but one of the most persistent myths about illegal aliens is that their mere numbers strain our economic capacity, thus lowering our standard of living. This opinion rests on a false conception of a fixed pie—the more people there are, the smaller each slice. As noted above, the Cuban experience in Miami suggests that the influx of immigrants actually stimulated the local economy. Historically, there appears to be no correlation between the rate of immigration and economic health. One of the healthiest periods in American economic history, 1881 to 1921, coincided with the arrival of 25 million foreigners. The Great Depression, on the other hand, came only a few years after we established the first immigration quotas. Nor is there any obvious relationship today between the number of illegal aliens in a given region and that region's prosperity; some states, like those of the Southwest, have healthy economies despite a lot of aliens, while the industrial cities have both aliens and poor economic health.

One reason the debate about aliens so often goes astray is that it concentrates on their effects on the rest of us, ignoring humanitarian question of whether or not coming here is good for them. Our immigration laws slam the door on thousands of people who would like to move to the U.S., and that in itself is a bad thing. Moreover, many would-

be immigrants—who come mostly from poor, authoritarian countries in Latin America—see the U.S. as the only way out of a life of poverty, ignorance, and oppression, and in most cases they are probably right. To keep them out is not only to circumscribe their freedom, but also to sentence them to a bleak, painful existence they desperately want to escape. The people who founded the United States pictured it not as an entrenched and isolated outpost but as a beacon for the rest of the world and a refuge for the oppressed. We may have grown cynical about such notions, but is it right to turn away all the foreigners who still take them seriously?

Under the worst of circumstances, namely living here illegally, what the aliens find in the U.S. is plainly better than what they left behind, which of course is why they came. Even the lowest wages paid in the U.S. are much higher than most could dream of making at home. New West mentions one Mexican who got $1.35 an hour stripping paint in his first job here—ten times what he earned driving a delivery truck in Mexico.

But legalizing their status and loosening restrictions on immigration to make illegal entry unnecessary would substantially improve the aliens' lot, which is what many Americans apparently regard as scandalous.

Obvious, the aliens would benefit from the ordinary rights and privileges accorded other American workers. The illegal alien's outlaw status undercuts his bargaining power and compels him to accept nearly anything his employer chooses to inflict on him, from low pay to long hours to poor working conditions. If he complains, his employer can fire him or even have him arrested by the INS. The alien can hardly demand that he receive the minimum wage or be allowed to join a union (although some unions have illegal aliens as members). If he is mistreated, defrauded, or injured on the job, he is not likely to seek legal redress. All the pressures on the illegal worker encourage him to do what he's told, take whatever pay he's given, and keep his mouth shut.

Many employers take full advantage of the opportunity to exploit the aliens. They often pay illegals substandard wages—a practice made possible not by the normal dictates of the market, but by a "black market" in labor that puts the employer in an abnormally strong position and the employee in an abnormally weak one. North and Houstoun discovered, for example, that the aliens in their survey generally "earned less per week than comparably employed U.S. workers, though they generally worked considerably longer hours." The aliens in industrial jobs worked an average of 44.5 hours a week, while comparable Americans worked only 35.9 hours. Illegal aliens no doubt also suffer relatively poor working conditions.

They are also vulnerable to even more flagrant abuses. It is a common practice for farmers in the Southwest to hire illegal Mexicans for a couple of weeks and then call the Border Patrol when payday rolls around. The Border Patrol hauls the aliens away and the farmer gets a couple of weeks' labor for only the cost of room and board. A former official of California's North County Chicano Federation told the San Diego Human Resources Agency that such incidents are standard practice among many citrus and flower growers, who they estimate owe illegal aliens $20,000 in back pay. Another Chicano organization said that kickbacks to field bosses and excessive deductions for room and board likewise are common practices. The San Diego report mentioned an incident in which an illegal alien who suffered three heart attacks was refused permission to see a doctor; when he finally visited one on his own, he was fired.

Some pay hundreds of dollars to professional body-smugglers for help in getting across the border, and hundreds more for forged

BODY SMUGGLERS

Of course, many aliens have to go through a lot of hardship just to get into the U.S. papers, "green cards" (Alien Registration Receipt Cards), and entry documents—some of which are so poorly forged as to be worthless, although the aliens have no way of knowing that. Aliens who walk across the border (as most illegals do) are often attacked by gangs of hoodlums on either side. One Border Patrol officer told the Washington Star, "On the American side, we broke up gangs of local high school kids who had been lying in wait for the wets. They were robbing them, beating them up, raping the women. We even had two 12-year-old kids who were stationing themselves at the end of a long culvert drainpipe that the aliens used to sneak through. They were shaking them down for 15 or 20 bucks apiece, threatening to call us if they didn't pay up."

Without erecting a Berlin Wall along the Mexican border and subjecting employers and illegal aliens to all sorts of draconian measures—which would require much higher expenditures and expanded enforcement—there is no way to stop the influx of people from Latin America. Too many people want too badly to get in, and we would gain little from redoubling our efforts to keep them out.

And it is not likely that more liberal immigration laws would attract unmanageable numbers of foreigners. The current length of time that Western Hemisphere people have to wait for visas is about three years, which at the current quota means a total of only 360,000 people are waiting, hardly an alarming number. Charles Keeley is skeptical of scare talk about the flood of aliens who would arrive if restrictions were relaxed. "You would probably get a big initial flow, but not necessarily an unreasonably high number, and after that the number would probably drop off sharply," he says. "I'm not so sure everybody's dying to get in here." Wayne Cornelius says few illegal aliens from Mexico want to live here permanently anyway, and that most of them come for less than six months. Keeley agrees, noting that one million legal aliens left the U.S. during the 1960s.

In keeping in mind the humanitarian reasons for letting in more foreigners, it is not necessary to lose sight of our own interests; letting them in need not be a purely selfless gesture. After all, the rest of us have much to gain from the continual infusion of new people, whose mere presence testifies to their determination and willingness to take risks. One nice thing about the difficulty of immigrating is that it weeds out those who are timid or lazy, leaving only the adventurous and the ambitious. The old American ideal of the melting pot is based, in part, on the knowledge that most of the foreigners who come to America are those with the qualities most beneficial to a dynamic society.

Indeed, the strangest thing about the controversy over illegal aliens is that it so seldom touches on our hallowed tradition of welcoming the weary immigrant, a tradition that goes to the heart of the nation's character and purpose. There are few American traditions nobler than that of providing a sanctuary to the weak, freedom for the persecuted, and opportunities for achievement to the ambitious; and for that matter, few that have had such far-reaching benefits.

Like our own parents and grandparents, foreigners come to this country today to lift themselves out of poverty, to escape political oppression, to give their children a better life. The choice is between continuing this legacy and standing at the walls to beat back the hordes—a choice that tests not only our trust in our heritage and our free institutions, but our humanity as well.

METRO-HEALTH HMO

HON. ELWOOD HILLIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. HILLIS. Mr. Speaker, during the August recess, I had an opportunity to visit the Metro-Health plan offices in Indianapolis. Metro-Health is the only health maintenance organization—HMO—in my home State of Indiana and I was happy to have the chance to get a first-hand look at its operation and facilities. In view of the current national debate on health care delivery in the United States, I would like to share with my colleagues some of the impressions I received from this visit.

Metro-Health is operated, as are all HMO's, by a private, not-for-profit corporation. Its services are offered to employee groups as an alternative to the more traditional health insurance plans which reimburse doctors and hospitals after the service is rendered to the patient. The primary difference with the HMO is that the medical services are paid for in advance by the subscriber and, for the most part, those services are provided at the HMO itself with functions similar to a group practice clinic.

The HMO I visited in Indianapolis has been in operation for 2½ years. It serves 7,500 members, all of whom elected to join as an alternative to traditional employer provided health insurance programs. Metro-Health is staffed by eight full-time physicians and utilizes 20 medical specialists for referral cases. I was impressed by its sophisticated diagnostic equipment as well as its facilities for testing and analysis. Such "in-house" equipment, along with an emphasis on preventative medicine, has helped to reduce the need for hospitalization of Metro's subscribers. Furthermore, these services are provided at approximately 40 percent of the normal hospital rate.

In coordination with the HMO concept of preventative medicine, I was impressed by the comprehensiveness of the Metro-Health plan. Its medical offices include facilities for eye examinations, dental care, nutrition counseling, casts and dressings, laboratory analysis, X-rays, and minor surgery. All of these services are prepaid and most are available to the subscriber at no additional charge. With the exception of voluntary sterilization and mental health crisis intervention, no service costs are more than $2. And when the occasion arises where the subscriber's medical needs require hospitalization or the care of a specialist, the HMO makes all the necessary arrangements and covers the cost of those services. Furthermore, Metro-Health will offer a medicare buy-in

option within 6 months in order to make this facility available to senior citizens.

Mr. Speaker, I believe that we are long overdue for a common-sense approach to solving the health care problems in this country. While HMO's are not a panacea for rising medical costs, they can, and should, have a place within the framework of a national health care legislative package.

SEALED BIDDING YIELDS MORE FEDERAL REVENUE

HON. JOHN KREBS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. KREBS. Mr. Speaker, the U.S. Forest Service has disclosed some startling information concerning the new sealed bidding regulations implemented through the National Forest Management Act of 1976. The data clearly indicate that the Federal Government realizes more revenue through the application of sealed bidding to National Forest timber sales than it would through application of the oral bidding process.

Recent figures pertaining to sales which took place at each of the six western Forest Service regions in the first half of 1977 indicate, that overall, in situations where both oral and sealed bidding were used, sealed bidding returned substantially higher bid premiums than did oral bidding.

Moreover, figures regarding sales consummated during the first 6 months of 1977 in the Nation's most active timber producing area, region 6—Washington and Oregon—appear to now challenge testimony given by U.S. Forest Service Chief John McGuire on February 7, 1977, before the Forests Subcommittee of the House Agriculture Committee. Chief McGuire testified there was no evidence to suggest that sealed bidding would, on balance, produce greater income to the Federal Government.

In region 6, however, where a mix of both oral and sealed bidding was employed, sealed bidding produced an average of $14.84 more per thousand board feet of timber sold in the eastern Ponderosa pine area and $11.57 more per thousand board feet sold in the western Douglas fir area. The Forest Service's own data indicate that the Federal Government would have lost between $20 million and $25 million had oral bidding been employed in 99 percent of the sales which took place in Oregon and Washington.

It is important to note that the bidding regulations which resulted from the National Timber Management Act of 1976 received a liberal interpretation by the Forest Service in favor of the timber industry's desire to continue oral bidding. Had the strictest interpretation of section 14(e) been implemented, that is, selling all timber by sealed bids, one can only speculate as to the total amount of additional revenue the U.S. Treasury would have derived.

H.R. 6362 would repeal application of the sealed bidding provisions to sales of national forest timber. Because this legislation barely passed the House Agriculture Committee, by a 20 to 20 vote, and will soon be before the full House, it seems appropriate to bring to the attention of my colleagues an article which appeared in the August 14, 1977 edition of the Washington Post. The article succinctly described the economic advantages of retaining the present sealed bidding regulations:

SEALED BIDS YIELD MORE FOR NATIONAL FOREST TIMBER

(By George Lardner Jr.)

In the first review of federal timber sales in the Pacific Northwest under a new, sealed-bidding law aimed at preventing collusion, the U.S. Forest Service has found that it produces more money for the government than the traditional system of oral auctions.

The study would appear to undercut a major contention of the Western timber industry, which has been lobbying intensively for repeal of the sealed-bidding rule.

The review covered timber sales from all 20 national forests in Oregon and Washington for the first six months of 1977. It was completed by the Forest Service's regional offices in Portland last week. A copy was obtained by The Washington Post.

According to the study, sealed bidding for federal timber in the coveted Douglas fir region on the west side of the Cascade Mountains produced $274.7 million—$115.9 million more than the Forest Service's appraised prices.

Timber sold at oral auctions on the west side brought bids totaling $51.1 million—only $19.2 million more than the minimum prices fixed by the Forest Service.

Industry pressures have already forced the Forest Service to cut back sharply on the sealed bidding prescribed by the 1976 law, but most of the national forest sales in the two states for the first half of the year were carried out by sealed bid.

A total of 1,485 billion board feet of timber was sold by sealed bids on the west side of the Cascades at an average bid price of $184.90 per 1,000 feet, $78.05 above the appraised price. By contrast, 296.6 million feet were sold at west side oral auctions at an average bid price of $172.42 per 1,000 feet, $64.66 above the appraised price.

On the east side of the Cascades, where ponderosa pine and other types predominate, sealed bidding produced $49.9 million, or $14.3 million more than the supposed "fair market value" appraisals of the Forest Service. Oral auctions yielded $26.7 million, or $5 million more than the appraised price.

A total of 437.3 million board feet was sold by sealed bids on the east side for an average bid price of $114.03 per 1,000 feet or $32.67 more than the appraised value. By contrast, 236.6 million board feet were sold in west side oral auctions for an average bid price of $112.98 per 1,000 feet, or $21.18 above the appraised price.

Thus sealed bidding produced an average of $13.39 more per 1,000 feet in the Douglas fir region west of the Cascades and an average of $11.49 more for each 1,000 feet of timber sold on the east side.

In all, according to several extrapolations, the government would have lost between $20 and $25 million for the first half of 1977 if the Forest Service had continued to use oral bidding on 99 per cent of its sales in the two-state region.

The National Forest Products Association, which has been leading the drive to repeal the sealed-bidding law, has repeatedly insisted there was "no evidence" that sealed bidding produces more money on the average than oral auctions. Instead, the association ("Your forest industry voice in Washington") has contended in one position paper after another that "the reverse may well be true," especially in the Pacific Northwest.

The new Forest Service study, however, reinforces preliminary indications from an earlier nine-year review of national forest sales that, while based on scantier data, suggested that sealed bidding yielded higher prices.

"We didn't really have enough data before this, but it's beginning to pile up," said one Forest Service expert.

Sealed bidding has been the rule, rather than the exception, for decades in the South and the East. Oral auctions became customary in the West, especially in Oregon and Washington, following World War II, ostensibly to give local lumber mills a chance to bid more than one, offer a higher price and protect their traditional timber supply from outsiders.

Oral bidding also provides an opportunity to buy government timber at the lowest possible price (the Forest Service appraised value), which is all that need be offered if no one else shows up at the auction.

The Forest Service has agreed that sealed bidding is "a greater deterrent to possible collusive practices," but despite several ongoing federal grand jury investigations, timber industry spokesmen deny that collusion is a real problem. The campaign for repeal of the sealed-bidding rule, meanwhile, has been mounted in the name of the "little sawmills" and small "dependent communities" that need nearby national forest timber to survive.

But, according to a study for Sen. Edward M. Kennedy (D-Mass.), Forest Service regulations that have been on the books for decades provide ample protection for unsuccessful bidders and local communities.

The chairman of the Senate Antitrust Subcommittee, Kennedy, who is seeking to uphold the sealed-bidding rule, pointed out in a recent floor statement that under one key safeguard "an unsuccessful bidder or a community which believes that it is dependent" may protest the award of a timber sale to the high bidder, whatever the method of the bid.

The rule can be invoked even if loss of the timber will simply "materially lessen" job opportunities, but it apparently has been used only once since 1960, to block the bid of a Canadian firm for timber in Montana's Kootenai National Forest.

"The right to protest the award because job opportunities will be lessened or a mill will be forced to close . . . is a valuable privilege that dependent communities have had for 30 years and have not used," Robert E. Wolf, a forestry expert for the Congressional Research Service, advised in a recent memo to Sen. Dale Bumpers (D-Ark.), another defender of the sealed-bidding law.

Another Forest Service regulation in effect for years permits the rejection of high bids that might result in a "monopoly" situation, but this rule has apparently never been used.

Kennedy wound up his recent floor statement with a series of 1975 and 1976 memos from Forest Service files. In one, regional forester T. A. Schlapfer of Portland (now retired) strongly recommended "judicious use of a mixture of sealed and oral auction" in light of various Justice Department investigations under way. He alluded to the 1975 convictions of Champion International Corp. and six others for collusive bidding in violation of the Sherman antitrust act on timber from Oregon's Willamette national forest.

"We cannot afford to be caught without having taken any action in [the] event there

is another conviction," Schlapfer wrote. But he went on to complain: "Generally, industry has not made any constructive suggestions. They do not recognize that here is a problem."

PENN CENTRAL'S DELINQUENT TAXES

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Ms. OAKAR. Mr. Speaker, just before the House recessed for the month of August, I introduced H.R. 8882. This bill will aid thousands of local, county, and State taxing districts in the recovery of long overdue Penn Central tax dollars.

The Penn Central Transportation Co. went into bankruptcy on June 21, 1970. As a result of the railroad's reorganization, as prescribed by congressional and Federal court actions, there is nearly $500 million in taxes that the Penn Central has not paid to State taxing authorities and their political subdivisions. These are tax dollars that fund our schools and local governments.

At present, the Penn Central trustees are attempting to have these localities settle for 50 percent of the post-bankruptcy taxes, or 44 percent of all taxes owed. There is much dissatisfaction among local officials over this settlement proposal. In fact, there is a national coalition of local, county, and State officials who are fighting this proposal in the U.S. district court in Philadelphia. Moreover, this group is lobbying on behalf of the legislation that I have introduced. H.R. 8882 has also received the endorsement of the U.S. Conference of Mayors and the American Federation of Teachers.

H.R. 8882 addresses itself to a another settlement proposal before Judge John A. Fullam of the U.S. district court. This proposal would provide for an immediate 20 percent cash payment and the remaining 80 percent of taxes to be paid through the issuance of Penn Central notes. The legislation that I have introduced would provide Federal guarantees for these series C and series D notes.

Some have asked, "Why should the Federal Government guarantee the delinquent tax debts of a private corporation?" This is a legitimate question, but it neglects to take into account the history and fact of this bankruptcy proceedings.

It was the Federal Government which provided the initiative to reorganize the railroads, and it is a federally related corporation—ConRail—which supplants the old rail lines. I would ask, "Why should local levels of government and our school systems be asked to subsidize the reorganization of the railroad?" Another point to remember is that the Federal Government's administrative expenses have the first lien against the bankrupt railroad. This puts State and local taxes behind those moneys that were extended to the Penn Central to keep it running after its declaration of bankruptcy. This situation is unprecedented, and I would contend that it is unfair.

I wrote to the Secretary of Transportation to reverse the order liens against the railroad. Secretary Adams chooses to leave the situation as it is, although he is empowered by the Regional Rail Reorganization Act of 1973 to provide some remedy for this situation. With this display of administrative inaction, I have chosen to initiate this legislative action. For over 6 years, the Federal Government has stood by idly as the State and local levels of government have anxiously awaited the outcome of the Penn Central bankruptcy proceedings. It is likely that this long legal battle is far from over. Mr. Speaker, it is time for the Congress to give assurances to these municipalities, counties, and States who anxiously await their tax dollars.

H.R. 8882 will insure that the series C and series D notes that Penn Central offers are, indeed, good investments for our counties, cities, and school systems. By assuring the investment community that these Penn Central notes are good, solid investments, we assure State and local government that they can continue delivery of vital services, and we assure our schools that they, too, will have the funding needed to deliver good educational services.

Mr. Speaker, I ask my colleagues to take a long and serious look at this situation and the legislative remedy that I offer. I solicit their support for this much needed and long overdue measure.

U.S. OIL AND GAS POTENTIAL

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. COLLINS of Texas. Mr. Speaker, during the August recess I went to west Texas to check out energy developments. We all are cognizant of the oil and gas potential in the area. However, most people do not understand the cost and risk involved in developing new oil and gas reserves.

I want to give you an experience that happened this past week in drilling from Dimmit County, Tex. John J. Redfern, Jr. of the Flag-Redfern Oil Co. in Midland was telling me about it. This was a new well that already has a cost of $338,838. They were drilling based on the fact that this location was close to two producing wells. There was one well 2,200 feet in one direction and another well was 4,000 feet in the other direction. This new well seemed to be pretty well centered out and should have seen production in that pay zone. However, when they got down to the 7,000 foot level where they expected to have excellent production, there was nothing there.

Just because you have oil or gas next to you, does not mean you have a new oil or gas well. Most of the wells drilled are dry but you have to keep drilling if you are going to have production.

We need to remember that half of our oil this year is being imported from the Arab OPEC countries. In 1972 we were paying the Arab OPEC countries $5 billion for this oil. Today we are paying $45 billion and are suffering a tremendous negative balance of payment.

We can get the oil and gas here in the United States but we need to pay the independent oil and gas producers so they can take the risk.

PHILADELPHIA ENDING SUBSIDY OF SUBURBAN COMMUNITIES FOR WATER, SEWAGE SERVICES

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. EILBERG. Mr. Speaker, the city of Philadelphia is at long last taking steps to change the ratemaking procedures involved in providing water and sewage services to neighboring suburban communities, thus ending a system under which the people of the city of Philadelphia have, in effect, been subsidizing their suburban neighbors.

According to Water Commissioner Carmen F. Guarino, Philadelphia hopes to collect at least $3,301,000 more a year, retroactive to July 1, from suburban communities for water and wastewater services.

Guarino said that the city plans to reform the existing service contracts that it has with 11 suburban townships and authorities. This reform will include higher charges that will return to the city its actual costs for serving the suburbs.

Ordinances will be submitted to city council to approve the new rate structure.

Guarino said that the water department receives, treats, and disposes of wastewater (sewage) from all of its suburban customers. It also supplies drinking water to one public authority.

In pursuance of its plan, the water department has begun mailing letters to suburbans officials, informing them of the proposed rate and contract changes. Amended contracts will be mailed for signature at a later date.

The commissioner said that the new charges were developed for the city by a private engineering firm, Black & Veatch, of Kansas City, Mo. The Black & Veatch plan incorporates ratemaking principles that are commonly recognized by central water and wastewater utilities when assessing outlying communities for service.

"Such uniform ratemaking for suburban communities is something that we have been unable to do before," noted Guarino. "All of our contracts were negotiated at different times, over a period of 50 years, to fit special circum-

stances, and there has been little uniformity."

These contracts have failed to keep up with rising costs by the Water Department, he added. At the present time, the department's costs for suburban service are running about $3 million a year above revenues received from the suburbs.

Guarino said that the new system of charges, based on improved utility ratemaking practice, will correct this situation. The new charges will:

Be fairer to Philadelphia residents, who will no longer have to subsidize service to the suburbs,

Reflect the true cost to the city of providing water and wastewater services to the individual suburban communities,

Be adjustable from time to time, whenever rates paid by water-sewer customers inside the city change,

End discriminatory treatment among suburban communities themselves, since some of them have been paying less than others for the same quantity of service received from the city,

Help Philadelphia reform its system of sewer charges to all its users, both inside and outside the city, as required by the Environmental Protection Agency.

Guarino said that the EPA has asked the Water Department to change the method of calculating all of its sewer charges, including those paid by Philadelphia residents. This has to be done by July 1, 1978, he noted, in order for the city to continue to receive Federal funds for the $414 million expansion of its wastewater (sewage) plants.

"We are starting the overhaul of rates in the suburbs this year rather than next," said Guarino, "because revision there is more urgently needed than it is inside the city."

The commissioner said that the new suburban charges will cover the collection, treatment and disposal of wastewater from several townships—Abington, Cheltenham, Lower Merion, Lower Moreland, Springfield, and Upper Darby; several public authorities Bensalem Township authority, Lower Southampton municipal authority, and Delaware County regional water quality control authority (DELCORA). In addition, both water supply and wastewater treatment charges will be increased to the Bucks County water and sewer authority.

Guarino said that the U.S. Navy Yard will be taken out of the suburban category. Because is is located inside the city it will pay regular city sewer rates in the future rather than wastewater charges fixed by contract.

The Navy Yard already pays regular city rates for water supply.

Wastewater rates paid by the suburbs will rise by at combined average of 148 percent retroactive to July 1, 1977, Guarino noted, while the range of individual community increases will be from 92 percent to 335 percent. This excludes a small percentage of increase in revenue resulting from larger wastewater flows.

In 1975, the 11 suburban townships and authorities paid $1,507,100 for wastewater collection and treatment by the city. The bill for 1976, which was due July 1, will be $3,882,000 under the new rates.

The Bucks County water and sewer authority will pay $926,100 more for purified water from the Torresdale treatment plant, or a total of $1,248,100 for 1976. In 1975 it paid $322,000.

Guarino said that the new charges will return to the water department an amount equal to (1) operating and maintenance costs, (2) depreciation costs, and (3) return of investment, for those city plants, pipelines, and pieces of equipment that service each suburban township or authority. In addition, a 10 percent management fee will be added to these costs.

YOUNG ILLINOIS CONSTITUENT UNDERSTANDS IMPORTANCE OF METRIC CONVERSION

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. McCLORY. Mr. Speaker, the changeover to the metric system of weights and measures seems to be well understood by the younger generation. I am heartened that Gary Voss, a seventh grade student in the Hampshire Junior High School, has composed an article on this subject, as one of a series of similar articles which have appeared in the Hampshire Register, a newspaper published in Hampshire, Ill., in my congressional district.

Gary's convincing statement speaks eloquently and with a clear understanding of the subject of the metric conversion and I am pleased to enter his remarks in the CONGRESSIONAL RECORD:

[From the Hampshire Register, Aug. 3, 1977]

MEASUREMENTS ARE CHANGING

(By Gary Voss)

Measurements are changing in the world. They are changing from inches, pounds, feet, yards, tons, and so forth, to the new measurements of the Metric System.

People will use the Metric System as part of their daily lives. It will be easier in life. Just as for elders as for youngsters.

For elders it will be easier to figure out bills and other appliances. As for driving, instead of the speedometer reading in miles per hour, it will read in kilometers. The speed limit signs also will read in kilometers.

As for women in cooking, it will be in grams, liters and other metric measurements and also for youngsters. Math will be easier for them because there are no fractions in the math work of the Metric System. So the math work in schools and out of schools will be in the Metric System.

People think the Metric System is going to be a big problem. Well, it's not! The Metric System is going to be easier to learn and to work with.

The youngsters that are still in school will learn it faster and easier. But it still won't be harder for elders. Because they'll learn it right along with everybody else.

Even their children that learned it in school will help their parents learn it. Like if their moms get a new cookbook. So they decide to make a cake from a recipe and they look at it and it says maybe a liter of milk and they sit there and say, I don't get it, what's a liter of milk? I never heard of the word. So then they remember their kid saying something about he was learning the Metric System.

So they ask their kid to help them and so their kid tells them what a liter is and some other metric measurements.

And so later on after they get familiar with the Metric System then maybe they'll tell friends about it and so it will go on until somehow everyone will know the Metric System.

RENEGOTIATION BOARD CHAIRMAN ADMITS ERROR AND OVERSTATEMENT

HON. MARK W. HANNAFORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. HANNAFORD. Mr. Speaker, one of the most frequently asked questions today is "What is Congress doing to eliminate unnecessary spending?" In a period marked by high unemployment and inflation, as well as by problems of Federal, State and local government fiscal needs, and declining national capital investment, we can ill afford to waste tax dollars.

In this connection, Mr. Speaker, when it becomes apparent that a Federal agency has proven to be cost ineffective, and has patently engaged in bureaucratic abuse of power, then it is clear that that agency should be abolished. The Renegotiation Board is an unnecessary peacetime agency. What is worse, it appears that the Renegotiation Board has resorted to sensationalism in a desperate attempt to convince us of its importance by charging Lockheed with bilking the Navy out of 117 million pounds of steel. The investigation of this allegation, as I pointed out earlier, is properly the responsibility of the Criminal Division of the Justice Department. The only business the Renegotiation Board had in the matter was for publicity purposes at a politically sensitive time in the consideration of the legislation to extend its life and expand its powers.

The attached Wall Street Journal article of August 22, among others, reveals that as a result of an August 5 meeting concerning the accuracy of its charges, the Board retracted its allegations against Lockheed on August 17 and that its Chairman admitted error and "overstatement." The serious implications of the Board's conduct in this matter should not be overlooked.

As I commented in a letter on June 21 cosigned by Senator ALAN CRANSTON, the Board's behavior in the Lockheed affair provides ample evidence of the weak foundation on which it rests. The Rene-

gotiation Board deserves to be dismantled during peacetime and reinstated only during periods of national emergency. Attached are articles from the Wall Street Journal and the New York Times, and a Washington Star editorial on the Board's conduct:

[From the Wall Street Journal, Aug. 22, 1977]

RENEGOTIATION BOARD HEAD ADMITS ERROR IN ALLEGATIONS OF LOCKHEED OVERCHARGES

(By Jerry Landauer)

WASHINGTON.—After twice flogging Lockheed Aircraft Corp. for allegedly overcharging the government on Navy shipbuilding contracts, the chairman of the Renegotiation Board is grudgingly admitting that he made a mistake.

The board chairman, Goodwin Chase, acknowledged his error, along with probable "overstatements," in copies of a letter to Lockheed that were sent to key lawmakers on Capitol Hill to "set the record straight." His admission, embarrassing to certain legislators who had accepted the overcharge allegations as facts, could neutralize President Carter's pleas to extend the Renegotiation Board's life.

Government officials involved in the controversy between the board and Lockheed say it appears obvious in retrospect that Mr. Chase was using the company to whip up congressional support for legislation to extend the Renegotiation Board through 1982, and to enhance its authority to recapture excessive profits from defense contractors.

INVITING TARGET

"This is a grubby example of self-serving bureaucracy," said one Treasury official who asked not to be identified. Lockheed's scandal-tarred reputation, resulting from admissions of big payoffs abroad to win foreign business, makes the company an inviting target for ambitious bureaucrats, the official said.

Mr. Chase began his campaign against Lockheed in testimony to the Senate Banking Committee in June. Citing contracts that had been completed as long ago as July 1971, he contended that Lockheed's shipbuilding subsidiary couldn't account for 73 million pounds of steel for which it had billed the Navy as part of the cost for seven amphibious transport docks, known as LDPs. Lockheed's billing practices, Mr. Chase asserted, "proves that the Defense Department cannot, on its own, protect the taxpayers against overcharging by contractors."

Early in July, Mr. Chase sent three aides to the Seattle headquarters of Lockheed Shipbuilding & Construction Co. They concluded—and Mr. Chase immediately notified Banking Committee Chairman William Proxmire (D., Wis.) in a hand-delivered letter—that the missing steel amounted not to 73 million pounds but to 117 million pounds valued at $10.2 million.

And to make sure that Congress wouldn't ignore the Renegotiation Board's alertness in protecting taxpayers, somebody promptly leaked the fresh findings. "Lockheed Overcharge Estimate Raised," a four-column front-page headline in The Washington Post reported, and Mr. Chase confidently asserted, "I stand foursquare on my statement and would be pleased to have it subjected to investigative scrutiny."

But according to Robert W. Haack, Lockheed's chairman, Mr. Chase kept avoiding company officials who hoped to resolve the controversy peaceably. "I felt as though I had the plague," Mr. Haack said. It's also known that Brian Freeman, secretary of the Emergency Loan Guarantee Board, which administers Lockheed's government-backed loans, sought to act as mediator, apparently because Lockheed's bankers were getting edgy about the harmful publicity.

Finally, the contending sides met Aug. 5, and last week Mr. Chase sent Lockheed what appears to be a partial retraction.

"Following our meeting the board's analysis was again revised, taking into account data assembled by Lockheed," Mr. Chase wrote. "Based on that review, I erred in the translation of the dollar amounts in question to pounds of steel. If the figures calculated by your internal auditors are correct, my figures for the amount of unaccounted steel are overstated."

LARGE DIFFERENCES

Mr. Chase contended, however, that "large differences" remain between the amount of steel Lockheed purchased and the amount it used to build the seven ships, but he offered no figures. Mr. Haack said that "if you put all the unaccounted for steel in your eye, it wouldn't hurt."

Repeated efforts to reach Mr. Chase weren't successful; his special assistant, John Davison, said the chairman isn't recanting or withdrawing "the initial position he took relative to the Lockheed matter. . . . I won't take the liberty of speaking for him beyond that point."

In any case, Mr. Chase's acknowledgement of error in calculating the dollars that may be involved won't help win votes in Congress to expand the Renegotiation Board's authority. Before the congressional recess, House Speaker Thomas P. O'Neill (D., Mass.) hesitated to bring the legislation to a vote, despite a round of letters from the President urging passage of the bill. In the Senate, Mr. Proxmire's Banking Committee is scheduled to consider the legislation in mid-September.

One particularly controversial feature of the measure is a provision authorizing Mr. Chase's board to scrutinize defense contractors product-by-product rather than on a company-wide basis.

[From the New York Times, Aug. 23, 1977]

ERROR CONCEDED IN CHARGES OF LOCKHEED OVERBILLING

(By Clyde H. Farnsworth)

WASHINGTON, AUGUST 22.—The Lockheed Aircraft Corporation today released a letter from Godwin Chase, chairman of the Government's Renegotiation Board conceding that he had "erred" in alleging before a Senate committee that the company had overcharged on a contract for the construction of seven amphibious transport dock ships for the Navy.

"You don't make undocumented charges and pronounce upon them publicly to further your interests," said Robert W. Haack, Lockheed's chairman, in an acerbic comment on an affair that has implications going well beyond a single company and the agency whose job is to prevent excess profits on defense contracts.

The admission by Mr. Chase that he "erred in the translation of dollar amounts in question to pounds of steel" and that "my figures for the amount of unaccounted-for steel are overstated" came as legislation is pending in Congress to extend the life of the Renegotiation Board to 1982 and to give the agency and its newly appointed chairman new powers.

The letter constitutes a potential embarrassment for the board and could weaken the legislative efforts in Congress.

The board, which has 179 employees, technically went out of business last September 30, when the last Renegotiation Act, which had been extended 13 times since originally enacted in 1942, expired. The board now works only on its backlog. It cannot examine any new cases.

Mr. Chase said today: "My letter in its entirety speaks for itself. I have no further comments to make."

He had conditioned his admission on the correctness of figures calculated by Lockheed's outside auditors, Arthur Young & Company.

The letter went on to raise a series of other questions about Lockheed's contracting procedures and said, "I have requested the Defense Contractor Audit Agency to assist the board in a further review of these areas."

Among the items questioned were: The cost growth figures submitted by Lockheed to the Navy in support of its contract claim; the "apparently excessive" progress payment billing to the Navy; the large difference between the amount of steel purchased and the amount actually used in the ships, and the relationship between these items and those currently being investigated by the Department of Justice on the Destroyer 1052 contract performed by Lockheed in the same period of time.

COMMENTS BY HAACK

Mr. Haack said in an interview from his headquarters in Burbank, Calif.:

"This is an oblique admission that he blew it. But Mr. Chase has kept the issue alive by raising difficult-to-understand problems We can justify our cost growth. Our progress billings to the Navy are reconcilable. Our scrap rates are defensible, and what the relationship is to the destroyer escort business is I just don't know."

Mr. Haack, who came from the presidency of the New York Stock Exchange to try to rebuild an image of Lockheed that had been shattered by overseas bribery scandals in the mid-1970's, said: "The kind of loose, irresponsible talk engaged in by Mr. Chase in those Senate hearings last June can be very damaging."

Through an Act of Congress, the Government had guaranteed up to $250 million of loans from a consortium of 24 commercial banks, and according to some reports, the bankers were getting nervous about the unfavorable publicity last June. Lockheed has paid back all but $80 million of the money.

Mr. Haack said he had tried to reconcile the dispute with Mr. Chase privately after calling on both internal and external auditors to examine the 28,000 invoices and count the steel in the contract at issue.

"I told him [Mr. Chase] that if any Lockheed personnel were culpable I'd cooperate in putting them in jail. He said he would apologize if he were wrong."

Mr. Haack continued: "We were absolutely certain that our case was right, but we simply couldn't get an audience. All we wanted was for his staff people to go over the facts with our staff people, but we were never accorded that courtesy."

Bills have been introduced in both Houses of Congress to extend the life of the Renegotiation Board.

The proposed legislation provides for penalties if companies fail to file with the board, allows it to issue subpoenas to get basic company information, empowers it to examine contracts on a product-by-product basis and requires an annual review of its activities by the General Accounting Office.

[From the Washington Star, Sept. 2, 1977]

CHASING THE "MISSING" STEEL

The Renegotiation Board has sometimes been characterized as a band of toothless tigers. Then Goodwin Chase came along. Mr. Chase, who recently was appointed chairman by President Carter, was described once by a House Banking subcommittee chairman, Rep. Joseph Minish, as the "only real tiger on that board."

It appears that Mr. Chase may have taken a bite out of his own tail in his campaign to give his board new life and broad authority.

Last June, Mr. Chase told the Senate Banking Committee that Lockheed Aircraft

Corporation's shipbuilding subsidiary had billed the U.S. government for 73 million pounds of steel that it couldn't account for in building seven amphibious transport drydocks. This proved, Mr. Chase said, "that the Defense Department cannot on its own protect the taxpayers against overcharging by contractors."

What it also proved, Mr. Chase would have liked members of Congress to conclude, was that it was necessary for the Renegotiation Board to ride herd on contractors who do business with the government. That, of course, was what the Renegotiation Board was supposed to do when it was established in 1951.

Congress evidently has been far from satisfied with the board's record of recovering excess profits; the lawmakers have voted the board operating funds from one congressional session to the next but have never established it as a permanent agency. The board generally has been considered something of a joke around town and Presidents have used it frequently as a repository for minor politician to whom favors were owed.

But President Carter and Mr. Chase, as well as subcommittee chairman Minish, are trying to persuade Congress to strengthen the board and give it permanent status. How convenient that steel overcharges by Lockheed, some involving contracts completed as long as six years ago, were discovered by Mr. Chase just as congressional committees were considering the legislation.

Mr. Chase pursued the Lockheed matter by sending three aides tor the shipbuilding subsidiary's headquarters, after which he informed the Senate Banking Committee by letter in July that the amount of missing steel was not 73 million pounds but 117 million pounds valued at $10.2 million. According to the *Wall Street Journal*, this higher estimate was promptly leaked to the press and resulted in prominently displayed new stories.

But was it 117 million pounds? Was it even 72 million pounds? Apparently not.

After meeting with company officials August 5, Mr. Chase sent Lockheed a letter which, according to the *Journal*, said in part: "Following our meeting the board's analysis was again revised, taking into account data assembled by Lockheed. Based on that review, I erred in the translation of the dollar amounts in question to pounds of steel. If the figures calculated by your internal auditors are correct, my figures for the amount of unaccounted steel are overstated."

How much overstated? Mr. Chase didn't say and the *Journal* said repeated attempts to reach him for clarification were unsuccessful. A company official contended that "if you put all the unaccounted for steel in your eye, it wouldn't hurt."

Well, how much steel, if any, did Lockheed overcharge the government for? Before giving the Renegotiation Board sharper teeth, the Senate committee ought to find out. It ought also to ask board officials for a full explanation of how and why they erred and whether going after Lockheed was mainly to promote legislation they wanted.

And tigers ought to be careful what they sink their teeth into; they could wind up swallowing themselves.

YOUTH INTERNSHIPS IN THE FIELD OF AGING

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. PEPPER. Mr. Speaker, I am pleased to introduce today a bill to provide for the placement of secondary school students in internships with aging professionals at administrative, research, and service levels for the purpose of sensitizing our youth to the problems of older people, to dispel negative stereotypic notions youth have about the aged and the aging process, and to encourage them to explore career opportunities in a field of aging.

For too long there has been a lack of career exploration in the area of aging. In the past few decades, however, both public and scientific attention has focused increasingly upon our elderly population, for they comprise the fastest growing group in our society. By the year 2020, over 40 million Americans will be aged 65 and above, compared to 22 million in 1975, and only 3 million in 1900. Due to breakthroughs in medical science, more and more people are enjoying longer lives. In 1900, a person could expect to live an average of 47 years. Today, the average life expectancy is 72 years. In each succeeding decade the proportion of elderly to young in the population will increase.

This substantial growth in numbers of individuals projected to be over 65 in future years is a compelling reason for public attention to focus on the shortage of manpower trained and capable of dealing effectively with an older person's needs.

Dr. Robert Butler, a noted gerontologist and psychiatrist, in testimony before the Senate Special Committee on Aging, expressed his concern regarding the lack of Federal attention devoted to training competent people for decisionmaking positions in the field of aging:

> . . . I would like to make one final point which is the need for training so that we can be assured that we get proper placement to begin with. Perhaps 20 to 40 percent of the people need not even go to nursing homes but could be in less expensive circumstances, home care, etc. To have properly trained people to make those decisions is something we have not really worked on adequately in the legislative authority so far.

Older people deserve a citizenry which is cognizant of and responsive to their plight. In time, as our enlightened public sentiment is translated into new and innovative methods of meeting older peoples' needs, many more jobs will be created in the field of aging. Such job development is not likely to abate and will require a large cadre of skilled personnel to implement effectively.

Our country possesses the resources necessary to meet these predicted personnel shortages—its youth. The current controversy surrounding the youth unemployment problem should prompt the Government to prepare this population for service with the aged—where opportunities for employment will abound. The rate of unemployment for youth has been consistently higher than that for the work force as a whole, and the problem is getting worse. The unemployment rate for teenagers has not been less than 10 percent since 1953; and between 1968 and the present, when the national unemployment rate rose from 3.6 to 8 percent, the teenage rate rose from 13 to 21 percent.

It has always been difficult for students to make the transition from the classroom to the world of work. Youth graduating from high school today are incapable of making informed choices regarding a productive role they can fill in society, with or without education, simply because they have so little contact with the working world and receive little or no skill preparation for such opportunities. Youth need experiences that develop the responsibility, self-reliance, and initiative upon which such informed choices are made. The ultimate success of schools depends upon their ability to provide these opportunities. Yet, formal schooling is carried on in the classroom with little of the learning experience from working in the community or with adults recognized or encouraged. Interpersonal and communication skills are largely ignored, despite the fact that human service employment opportunities in the area of aging are increasing as is the demand for these kinds of skills.

Mr. Speaker, the legislation I am introducing addresses this problem. This bill will provide high school students with work experience through education-related internships with policymakers, researchers, and service providers in the field of aging. This training device will bridge the gap between the world of academia and the world of work, expose youth to career opportunities in aging, and perhaps most importantly, assist to dispel the limited thinking children have about the elderly and their own aging process.

There needs to be an exchange between the young and the old. According to one study, young people fear growing old and thus tend to alienate the elderly. To youth, old people are those who are wrinkled and sad; they chew funny, walk with canes, and sit in wheelchairs all day. Such stereotypic thinking about older persons and the aging process is potentially harmful. In order for children to develop the positive self-concepts necessary for a fulfilling life, they must be able to adapt to their own changing, aging selves.

The Select Committee on Aging, which I chair, found that children may stereotype the elderly simply because they have so little contact with persons older than themselves outside their family unit. Opportunities, such as I propose in the legislation I offer today, must be made available in order that children might develop a positive perspective of the aging process. These internships will enable youth to get to know older people in a variety of settings and serve to assist them in challenging the stereotypes that society has constructed and perpetuated about aging and the elderly.

With the passage of the 1973 amendments to the Older Americans Act, Congress expressed its intent to bridge the gap between the young and old when adding 202(b), which states:

> (b) In executing his duties and functions under this Act and carrying out the programs and activities provided for by this Act, the Commissioner, in consultation with the Director of Action, *shall take all possible steps to encourage and permit voluntary groups active in social services, including*

youth organizations active at the high school or college levels, to participate and be involved individually or through representative groups in such programs or activities to the maximum extent feasible, through the performance of advisory or consultative functions, and in other appropriate ways. (Emphasis added.)

Under title IV–A of this same act, the Administration on Aging—AOA—is authorized to help meet the critical shortages of adequately trained personnel for programs in aging. The AOA supports training programs at institutions of higher learning that provide students with the necessary gerontological knowledge and skills to enable them to serve older Americans in their chosen career or profession. However, to date, the primary responsibility for recruitment and preparation of people for a career in the field of aging has been borne by our Nation's institutions of higher learning. This Federal program does not attempt to sensitize our secondary students to the problems of older persons prior to their entrance into an institution of higher learning or the world of work, despite the congressional mandate to do so.

The Nation and the Congress are concerned about the plight of the unemployed youth as well as the plight of the uncared for older person. My bill is a response to both of these problems. It will amend title IV–A of the Older Americans Act to authorize the Commissioner on Aging to make grants for the establishment of internship programs for secondary school students in the field of aging.

Students participating in such an internship program would have the opportunity to provide recreational, companion, escort, homemaker, and other similar services to older persons; to assist in determining the manner in which policy determinations are made in connection with programs and services in the field of aging; and/or to assist in information-gathering programs and processes relating to problems in the field of aging. Students participating in such internships would receive course credit.

Mr. Speaker, I believe we can no longer afford to ignore the provision the 93d Congress wisely included in the Older Americans Act to encourage youth participation in programs for the elderly. The bill I offer today is a step toward fulfilling that promise. I would urge my colleagues to join me in support of this worthwhile measure.

Last, Mr. Speaker, two people made a very special contribution in guiding the direction of this legislation: Ms. Sharlene Hirsch, national director of Executive High School Internships of America, who generated the proposal upon which this legislation is based, and Ms. Christy von Kaenel of Bowdoin College, who as an intern on the Select Committee on Aging furnished me the information and data necessary to prepare this bill.

I am pleased to insert at this point the text of this legislation:

A bill to amend the Older Americans Act of 1965 to authorize the Commissioner on Aging to make grants for the establishment of internship programs for secondary school students in the field of aging

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Youth Internships in the Field of Aging Act".

STATEMENT OF FINDINGS

SEC. 2. The Congress hereby finds that—

(1) older persons make up the fastest growing segment of the population of the Nation, since, by the year 2020, more than 40,000,000 individuals living in the Nation will be 65 years of age or older, compared to 22,000,000 such individuals in 1975, and 3,000,000 such individuals in 1900;

(2) the increasing number of older persons in the population of the Nation, and the frequency of the medical and social problems experienced by such persons, has created a shortage in the number of persons trained and capable of providing effective assistance and services to older persons in connection with such problems;

(3) the need to expand and improve the quality of life for older persons is not likely to abate;

(4) it is of critical importance that competent individuals who have an understanding of older persons and their problems be recruited to provide effective assistance and services to older persons;

(5) the primary responsibility for recruiting and training individuals for a career in the field of aging often has been performed by institutions of higher education;

(6) incentives must be developed to interest individuals in exploring career opportunities in the field of aging before such individuals begin their courses of study at institutions of higher education; and

(7) a program for the placement of secondary school students in internship programs at administrative, research, and service levels with professionals in the field of aging is a suitable mechanism for preparing individuals for careers in the field of aging.

YOUTH INTERNSHIP PROGRAM

SEC. 3. (a) Part A of title IV of the Older Americans Act of 1965 (42 U.S.C. 3031 et seq.) is amended by adding at the end thereof the following new section:

"YOUTH INTERNSHIP PROGRAM

"SEC. 405. (a) The Commissioner may—

"(1) make grants to any public or nonprofit private agency, organization, or institution, or to any State agency referred to in section 304; and

"(2) enter into contracts with any agency, organization, or institution specified in paragraph (1); to assist any such agency, organization, or institution in the development and maintenance of internship programs for secondary school students at administrative, research, and service levels with professionals in the field of aging.

"(b) Any agency, organization, or institution specified in subsection (a) which desires to receive a grant, or enter into a contract, under this section shall transmit an application to the Commissioner. Any such application shall be transmitted at such times, and in accordance with such procedures, as the Commissioner may reasonably require. Such application shall—

"(1) contain a description of the nature of the project which will be carried out under the grant or contract involved;

"(2) demonstrate the manner in which secondary school students participating in such project will—

"(A) provide recreational, companion, escort, homemaker, and other similar services to older persons;

"(B) assist in determining the manner in which policy determinations are made in connection with programs and services in the field of aging; and

"(C) assist in information-gathering programs and processes relating to problems in the field of aging;

"(3) demonstrate the manner in which such project will seek to—

"(A) interest secondary school students in exploring career opportunities in the field of aging;

"(B) stimulate greater communication among generations, in order to familiarize secondary school students with problems in the field of aging; and

"(C) encourage secondary school students seeking careers in the field of aging to acquire the skills and experience necessary to provide effective assistance and services to older persons; and

"(4) certify that secondary school students participating in such project will receive course credit from the secondary schools involved for such participation.

"(c) For purposes of this section and section 401, the term 'secondary school' means a day or residential school which provides secondary education, as determined under State law, except that such term does not include any school providing education provided beyond grade 12.".

(b) Section 401 of the Older Americans Act of 1965 (42 U.S.C. 3031) is amended by striking out "and" before "(4)", and by inserting before the period at the end thereof the following: "; and (5) by establishing internship programs for secondary school students in the field of aging".

SELECT COMMITTEE ON POPULATION

HON. STEWART B. McKINNEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. McKINNEY. Mr. Speaker, despite my concern over the expansion of the committee structure in the House, I am a cosponsor of House Resolution 70 and rise in full support of the creation of a Select Committee on Population.

Mr. Speaker, I have consistently and wholeheartedly supported efforts to improve the efficiency of our legislative process through the elimination of overlapping jurisdictions in many House committees. At present there are seven committees in this body with at least limited involvement in population-related issues. However, I see the creation of the Select Committee on Population as a remedial action rather than as a further proliferation of committee jurisdictions. In fact, Mr. Speaker, one of the essential functions of the committee will be to provide a focal point for the widely dispersed activities of those seven standing committees. The new committee will provide the first comprehensive analysis of global and national population trends that I have seen in my 7 years in the House.

In a letter to all Members, our colleague, Representative JOE MOAKLEY, Democrat of Massachusetts, stated that a review by the House Rules Committee of nearly 20 proposals for the creation of select committees resulted in the approval of only two—the Select Committee on Population being one. Mr. Speaker, I stand fast in my opposition to increasing the number and jurisdictions of the committees of this body. However, when problems, such as those resulting from the expansion of world population, be-

come so severe as to warrant immediate congressional attention, we have a responsibility to respond. And, there can be little doubt as to the seriousness of the problems of the world's ever-increasing population.

As my colleagues well know, the 4 billion inhabitants of this Earth may become 8 billion in just 35 short years. Furthermore, there is justifiable concern that the 500 million starving and malnourished people in the world may double in an even shorter timespan. The select committee will be able to provide all of us with a comprehensive analysis of the reasons and potential remedies to these regressive effects of overpopulation. The recommendations of the select committee to the seven standing committees will, as mandated by the provisions of H.R. 70 include the results of research on birth control methods—other than abortion—food reserves, and pollution resulting from population expansion. I expect that the committee will also forecast the implications and possible remedies for unbalanced resource distribution throughout the world—presently 5 percent of the population consumes 33 percent of the nonreproduction resources.

Mr. Speaker, it is the responsibility of each Member of this body to become much more aware of the myriad of problems associated with population growth. Future legislation must reflect our cognizance of worldwide demographics. I therefore urge each of my colleagues to support the committee in order to afford us the opportunity to educate ourselves more fully on these real and present problems.

THE ISSUE ISN'T BERT LANCE

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. BAUMAN. Mr. Speaker, today's editorial page of the Baltimore Sun contains an interesting comment on the real meaning of the Bert Lance affair. I commend it to my colleagues for their consideration in the larger context of this issue:

THE ISSUE ISN'T BERT LANCE

Bert Lance may be at the center of the controversy as daily revelations surface about his activities as a Georgia banker, his personal finances, his 1974 gubernatorial campaign and the casual intermingling of all three. But he is not the issue. With each passing day, each new revelation, Bert Lance in one sense recedes into irrelevancy as his old friend Jimmy Carter becomes more and more the central issue.

This is not to suggest that Mr. Lance's pre-Washington conduct is unimportant. It is important for what it tells of the nation's budget director and should be explored. Nor is it to suggest that Mr. Lance's preoccupation with his personal problems is of no consequence to government. If that were the case, then there would be no need for a budget director. But there is a need, particularly at a time when the administration's first budget is being formulated.

But the core of the matter is President Carter stacked up against Candidate Carter. The Lance affair has revealed a gap between the two, what in times past was called a credibility gap. Jimmy Carter was not elected on the basis of his platform, on a promise to cut defense spending, or to balance the budget, or to reform welfare. His platform was so sweeping and so vague that it evoked an uneasy distrust among many Americans. Jimmy Carter was elected in spite of the shifting specifics of his campaign.

He was elected because he offered a new and higher moral and ethical tone. This was the righteous candidate who said things should not only look right, they should be right; who preached openness and honesty and integrity; who said "We ought not to lower our standards in government. Our government in Washington ought to be an inspiration to us all and not source of shame." Jimmy Carter offered an answer to Watergate, to government by lie, cover-up, evasion and stonewalling.

President Carter, the Lance affair reveals, is something else. He put friendship above all else; he turned aside a report that raised numerous questions and suspicions about Mr. Lance's conduct because that report concluded that there was no reason to indict Mr. Lance. He was, said the President in reaction to that report, "proud" of his old friend.

The matter subsequently has grown more ominous. Mr. Lance is under investigation by several federal agencies with prosecutorial functions. And, worst of all, there are suggestions of cover-up by the Carter inner circle, of a failure to make known potentially damaging information about Mr. Lance before he was confirmed. Yet, the President now stands silent.

Bert Lance will have to answer for his conduct. And President Carter will have to answer for his. The President has expended considerable political capital. He has wasted it away. He has shown himself to be a shadow of the inspiring presidential vision he offered the American people. The time when Bert Lance could rescue his old friend by resigning is past. The damage, severe damage, has been done.

BRITISH-UNITED STATES RELATIONS

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. WHALEN. Mr. Speaker, the new British Ambassador to the United States, the Honorable Peter Jay, addressed the National Press Club yesterday.

Having just read a copy of the text of his remarks. I am impressed by what he articulated and the manner in which he did so. It is clearly an important statement of how the present British Government views its relationship with the United States and should be of interest to Members of the House. For that reason, I insert it at this point in the RECORD.

SPEECH BY THE BRITISH AMBASSADOR, MR. PETER JAY, AT THE NATIONAL PRESS CLUB, WASHINGTON ON SEPTEMBER 7, 1977

Perhaps I may first say a word or two of a personal kind about my first impressions of Anglo-American relations seen from the, for me, very new vantage point of an Ambassador's office and about the new era beginning in my own country. I was first of all very fortunate to be marvellously briefed in London by the Foreign and Commonwealth Office and by many other government departments, by trade union leaders and private corporations and by my eight immediate predecessors at 3100 Mass. Never I would think in the history of diplomacy was so much taught by so many to so few in so short a time. This experience, which had me travelling from Brussels to Belfast as well as up and down miles of corridors and dozens of elevators, left me with an abiding impression of the extraordinary breadth and diversity of the interface between our two countries. I began to believe that there was no one in Britain, no matter what he was doing, who did not feel a burning need to be kept closely in touch with his opposite numbers in the United States or who did not expect the Ambassador to see to it that all obstacles were removed from his path. While this is doubtless an exaggeration and while I at times felt somewhat daunted at having such a flood of intercommunication flowing through my study, I was deeply impressed at the richness, closeness and enthusiasm of the interest and friendshp felt in Britain for the American people and for so many aspects of American life and activities.

Diplomacy, I began to realize—at least where it concerned that multi-lane highway between the US and Britain—was no longer a matter of the measured exchange of elegant pleasantries and occasional exquisite indignation between stately chanceiries, but rather an integral part of the hurly-burly of every day life across increasingly invisible international frontiers. People in all walks of life in Britain are fascinated uniquely with what is going on in the US, with how it may affect them, with the opportunities it may afford them, with new ideas that may benefit them and, above all else, with the living proof which America represents that against all odds and all reasonable expectations problems can be solved and free societies can survive and prosper.

Secondly, I was exceptionally lucky to arrive twenty-four hours before an important round of talks between our Foreign Secretary David Owen and Secretary of State Cy Vance about our joint policy in Rhodesia. Apart from being a rare, instructive and impressive opportunity to see the top foreign policy-making echelons of the Administration—both in the State Department and in the White House—in operation right from the word "go", it seemed to be an object lesson in how business should be done. Indeed, I began to wonder, if all international relations were like this, how there could be so many problems in the world. Of course, it helps when the business is being done between old and close friends and allies who see eye to eye on all the main issues. But I was very struck by the speed and ease of communication, by the automatic assumption of mutual confidence and shared values and by the open willingness on both sides to modify previous thoughts quickly and cheerfully in response to sound points raised on the other side. I realise of course that things cannot always be quite so harmonious; but I do like to think that in relations between the US and Britain we at least always start from third base because we do not have to spend time overcoming differences of values, language and intellectual frameworks. Where we disagree at least we understand how and why we disagree. Take even the vexed question of Concorde's landing rights at New York. We have spent a lot of money with our partners in France building this plane. We naturally want to operate it on the premier transatlantic route for which it was designed. We believe that we are entitled to do so under international agreements and American law. You understand that. But the Port of New York Authority interprets its responsibilities as requiring it to oppose landing rights at Kennedy airport; and it is defending its right

to do so in the courts. There is very strong feeling on the part of some of the inhabitants of the airport area; and there are elections coming up in New York City and State. We understand all that, as we understand that the Federal executive cannot dictate either to the courts or to state and municipal authorities under your Constitution. The matter is being pursued by due—though some would say unduly slow—process of law in accordance with the ideals of the rule of law and an independent judiciary which we like to think of as one of our most successful exports. We know that we shall get fair play and that Concorde will be allowed to prove itself in New York. (And I hope that forestalls all the "have-you-stopped-beating-your-wife" questions which you had planned to ask me about Concorde!)

We take this view because we are a mature and grown-up democracy who confidently believe in the ideals which both you and we profess. A few years ago we might not have been quite so calm. From Suez to the inflation crisis of the mid-'70s we went through a very bad twenty years, which might well have sapped the self-confidence of any but the most blindly proud people. The name of the game was growth; and we were no good at it, though not notably worse than the US, which could, however, better afford to rest on its laurels. Confidence in the standards observed in public life took some bad knocks; and party politics sometimes spilled over outside its proper domain. We could not make up our minds conclusively what was our proper role in Western Europe; and we sometimes found it easier to paper over our manifest shortcomings with wall-to-wall excuses, eked out with the absurd reassurances that, even if the twentieth century just was not quite our scene, this was of little consequence for a nation that had done so well in other centuries and had given the world Magna Carta, thatched cottages and cricket.

But the two years from the summer of 1973 to the summer of 1975 were a true catharsis. We went to the brink, looked over and frankly did not fancy the drop. A new realism began to spread through the country. British trade union leaders put together the toughest and most successfully policed two years of pay restraint that we have seen, even though this went with the first sustained fall in real living standards in post-war memory. The Chancellor sat on the money supply, which followed a course of steady disinflation that Professor Milton Friedman himself might have charted. The budget deficit was brought under control and was consistently smaller, in relation to the size of our economy, than those of the U.S. and West Germany. The stock market has now recovered more than all the ground it lost from the early days of 1973 and looks set fair soon to achieve new all-time peaks, though it will take a little longer, no doubt, to make up the ravages of mid-decade inflation as well. Inflation is now coming steadily down. The balance of payments, helped by the fruits of the North Sea and the Chancellor's dogged refusal to let home spending rip is moving briskly into a large prospective surplus. Britain's reserves are now rising so rapidly as to be almost an embarrassment. The pound is steady and foreign investors are increasingly looking towards Britain, a land without Eurocommunists, grave political uncertainties or astronomic labour and other costs, as one of the most attractive outlets in West Europe for industrial and commercial expansion.

But the change goes much deeper than these favourable cyclical trends. Being cyclical some of them will doubtless turn unfavourable at some future point; and I would not wish to base a case purely on those kinds of shifting statistical sands. The new realism reflects a change of heart which is:—

In part a product of the experience of the early to middle 1970s;

In part a product of a new generation in all parts of our national life who newer knew the era of Empire and great-power status and so have no hankerings to go back to an irrecoverable past, who caught the American preference for success over the most elegantly justified failure and who have begun to show how realism allied to imagination and inventiveness can begin to transform the old stereotype of the necessary relations between capital and labour;

And in part the product of a new leadership in our national life which prefers facts to fancies and which is determined to give priority to policies that strengthen the nation over a decade rather than to postures which may grace tomorrow's headlines. As the Prime Minister put it to me as we walked the white cliffs overlooking the English Channel the weekend he took over the government, he saw his role as being that of Moses, to lead the people away from Egypt into the desert in the direction of the promised land even if it were never given to him to see it. That struck me then and strikes me now as the language of realism and statesmanship; and we already begin to see its fruits.

This change of heart has not only been apparent in Britain's domestic affairs: it has been exemplified also in our dealings with the world. The decision of the British people in 1975 to confirm their membership of the Common Market was decisive, laying to rest a long and unsettling debate about the form of our involvement in Continental affairs. This has given new and practical significance to Winston Churchill's old saw about Britain's unique position at the natural intersection of European, Commonwealth and Atlantic relationships. That role is no longer based on a real or illusory status as a global power, though Britain's long experience in international affairs and the Labour Party's traditional belief in a principled foreign policy, based on the ideals of universal human rights and self-determination, are together proving an invaluable heritage in today's conditions. Thus we have seen this year steadfast and prompt British support for President Carter's stand on human rights, unprecedented Anglo-American cooperation in Southern Africa, important developments in political cooperation in Western Europe under the British Presidency and a constructive contribution in the Paris North-South Dialogue, where all three axes of our world relationships come together. Without any lingering pretensions beyond our means we have settled down in a sensible pursuit of our reasonable interests and ideals whenever our history and our skills enable us to aim at practical achievements.

But, of course, we are not going to overcome the problems of decades—indeed, so far as our poor growth performance is concerned, of over one hundred years—in a brief span of years. It is a long hard hike through that desert. We shall certainly go through a very rough period this fall and winter as we adjust to the return of free bargaining over pay. Re-entry is always a scorching experience; and when you are dealing with the free decisions of twenty-three million independent-minded working people you can not expect to fine-tune the process with all the accuracy of a NASA computer. Yet, even here, we already see favourable signs: carworkers who are not willing to be led into industrial confrontation which they believe unjustifiable and unprofitable; the government airports authority which is resisting strong pressure to set a dangerous early precedent; and other encouraging straws in the wind. I am sorry about the inconvenience to the travelling public in the case of the Heathrow dispute. I can think of no greater misery than to spend hours stuck on the ground in an airliner waiting to take off. But there is something even more important at stake, and I believe that most travellers know that.

I give you fair warning, Mr. President, that we are back in business in Britain, not because we have solved all our deeper problems—we are only starting on the most urgent—but because we have recovered our self-confidence and our self-respect, because we are no longer divided on the fundamentals of economic realism, because decency and trust are beginning to return in our public life, above all else and quite simply, we are fed up to the back teeth with failing and introspection and we are coldly determined that over the next twenty years we are going to succeed.

And that I believe will be the best foundation for the continuation and reinforcement of that special friendship and mutual enjoyment with the U.S. which is, as David Owen put it to me on television earlier this year, the most important relationship we have.

"A GREAT WOMAN IN A GREAT CITY"

HON. DALE MILFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. MILFORD. Mr. Speaker, I would like to share with you a story that was published in the Sunday Magazine of the Dallas Morning News about one of my good friends in Irving, Tex. First, I think you should know that Irving is a suave, sophisticated city and rather conservative in philosophy. In many ways, this city of 118,000 people is the typical "suburbia" often sterotyped in TV shows.

Recently, Jackie Townsell, who is both female and black, defeated a white male realtor to win a seat on the Irving City Council. I think it is an interesting story.

Politics is not Jackie's only claim to fame . . . she cooks some of the best food in the district. Both my staff and I enjoy eating at Jackie's grocery-cafe where you can always find the best black-eyed peas around.

Mr. Speaker, I include this article written by Mike Granberry in the RECORD:

IN PLACE IN IRVING

(By Mike Granberry)

The stringy-haired, buck-toothed teaser limps in with a grin, plops down to a hot plate of meat loaf and cabbage and expresses unequivocal, unabashed displeasure.

With a smile as big as Dallas and a falsetto that would fill Gomer Pyle with pride, he declares, "All I need me is some YEW-TIN-SILLS!"

First one laugh, then another. In moments, everyone in Jackie Townsell's Irving, Texas, grocery-cafe is laughing like a seasoned idiot. Epidemic laughter, Jackie leading. Guffaws, running rampant.

Welcome to the House of Good Feeling.

Soon, the country-talkin' cane-poker is fitted with knife and fork and is gobbling cream corn and slurping strawberry Kool-Aid from a Mason jar as if his last meal had been set before him. "Jackie," he drawls, corn dripping out the side of his mouth, "I'd vote for yew inny-time!"

"Thank you," she replies. And laughs and laughs . . .

The noon rush over, Jackie herself settles down to a jar of Kool-Aid and an hour of quiet conversation. Only a few latecomers remain, munching diligently in the corner.

"I'm the only woman on the Irving City Council," Jackie declares, "and that is no problem for me. I speak out and say what I want and handle myself in the most business-

like manner possible. Men understand that, you know."

The men in the corner could be a trio of extras taking leave from "Straw Dogs." Or characters from the pages of a D. H. Lawrence novel. The men are mechanics, and they are greasy. They even joke about the odor they carry.

Hearing Jackie's remark, the curly-haired man rises, holds his cornbread high in the air in mock salute and cries out, "Amen, brother! Ahhhhhh-Men!"

Jackie laughs.

To a politician like Jackie Townsell, such endorsements are often worth free meals. But everyone pays at Jackie's place, and everyone gets their money's worth: all-you-can-eat, $2.50. And almost no one walks into or away from Townsell's Grocery without feeling embraced.

The air in there is certainly warmer than it is in anyone's political headquarters. Besides Jackie's omnipresent laughter and home cooking, a two-tone cat curls up in the corner and naps for a solid hour. Dust gathers on the Hershey bars as if, by God, it belonged there. Two boys, one black, one white, wearing boxer shorts, wrestle over a Dr Pepper bottle that is half as big as they are.

Jackie's mother, Mrs. Ola Howard, who along with Mrs. Ruby Collins cooks most of the vittles, takes swipes at three flies trying to kamikaze their way into the meat bin.

Follow the sloping ceiling and rutted floor of Jackie's general store all the way to the characters hunched in primitive chairs in the back corner. Past the Tide, Wonder Bread and Hostess Twinkies. Even past the Lifebuoy. Way past the Lifebuoy. Quick to admit that Jackie is an Irving folk hero, these pot-bellied boys are even quicker to confirm that they'll be back, again and again.

Politicized fork-movers have always frequented Townsell's Grocery, but lately more and more have been stopping in, having heard of or read about Jackie and wanting a piece of the action. Like a piece of peach cobbler, served up after cornbread and meat loaf and strawberry Kool-Aid.

Jackie Townsell's popularity base began building seventeen years ago, she suspects, when she and husband Jimmy first opened a grocery store in the muddy Bear Creek community of West Irving. A behind-the-scenes grassroots political organizer, Jackie started stuffing hearty meals into the stomachs of hungry callers five years ago. Food became the ultimate unifying force, luring eaters of all ethnic origins. "Me and Jimmy used to live here," she says, pointing to the back door where the bedroom used to be. "I'd be cookin' and people'd want some. I figured I'd better make 'em pay for it."

Which is cause for a good-natured laugh. And another. Looking "lean and mean" in summer blouse and blue jeans, Jackie appears much younger than 41, the mother of a man of 26. A fan of her own cooking, she is one of those rare individuals who can stomach great quantities of food and at the same time struggle to keep her weight up. Infuriating, those people are. But Jackie more than makes up for it. Good feeling comes as naturally to her as a giggle or a grin. Opportunity is a constant companion. The luckiest of accidents appear to happen to her as often as the grocery door swings open, as often as she smiles, takes another bite or greets a newcomer.

Truly blessed by chance—"I *have* had a good life," she says—Jackie is equally endowed with a gift for gab. Storytelling is as much a part of the store scene as political theorizing. Jackie is a laugh-along ringleader whose laugh is almost always the last. And for whom votes, when the time came, were as naturally easy to come by as belches of satisfaction.

The time was April, when Jackie defeated two challengers for a city council post. White realtor Jack Spurlock finished second; retired Navy man Johnny Watson, third. Watson visited the store, offering congratulations. Spurlock was never heard from.

"You wanna know how all of this started?" she says now, turning a capped hot sauce bottle upside down and watching its contents flow thickly to the top. "We used to sit around and talk about things—that's how it all got started. We'd talk about this amendment, that resolution—the world or the local situation in general. We'd discuss and cuss, agree, disagree, hash it out just to pass the time.

"I can remember first being really concerned long about 1968. But that wasn't the time for a black woman to run for office in Irving, Texas. Gradually, I got better and better feelings about running. Knowing when to run—why, people just made me feel it. Made me feel like I ought to.

"My white friends gave me the go-ahead to run. They asked that I put together a resume, list everything that I'd done in the last five years." She laughs. "They were shocked *and* impressed. It was so long." Laughs again. "One thing leads to another—don't you know?

"I feel delighted to be elected," she says, mentioning that she had lost a council seat by 225 votes in a runoff three years ago. Long active in civic affairs, Jackie preceded her council bid by serving as precinct chairman, a post she resigned to run her April campaign.

"To know the kind of people we have here—progressive proud people—makes me feel pride. I'm happy just being associated with them. I have so many friends, I'm filled up with tears just thinkin' about 'em . . .

"You know," she continues, "I don't know what a person would do without friends. A friend is someone I talk to whenever I'm low. Someone I call up whenever I want. Someone who's always there. Friends mean love to me, no matter what color they are.

"See, I see myself as a voice, a voice of all the people. I want to listen to the needs of those less fortunate than me, through I resent 'black spokesman' tags. I'm not a spokesman anyway. I'm a spokesperson." she laughs.

"Understanding means a lot of things, and I want to be all of the things to all of the people all of the time. Seriously, I'm for the entire city, all of Irving, not just West Irving. I have no hangups about black or white, rich or poor. I serve all. All elected me."

Race is a moot point in Jackie's store. Whites and blacks trade tidbits of gossip between bites and swallows. A white council member walks in, waves to Jackie and takes a chair. An old black peddler, wearing a red cap and poking the floor with an oak cane, sits down beside him. "How ya been?" the men say.

"The Sixties opened a lot of eyes," Jackie says "On both sides, black and white. Blacks were as prejudiced as whites. But people's minds have mellowed. Who you are is more important than what color you are.

"Martin Luther King was a hero of mine, and my other heroes were Mother and a white woman I used to work for. Both taught me to cook, and Martin Luther King is responsible for improving race relations, almost totally responsible. Martin Luther King taught me and a lot of other people how to love."

Politics and food have a way of infecting Jackie in the way that she infects others. Delightfully, with an innocence that seems to promise everyone no harm. "You've got to love politics," she says. "I certainly didn't get into it for the money (for council members, $100 a month). Prestige may be involved, but it's more the prestige of the people that I care about.

"I've always been a Democrat, though. I've always read the paper. I've always been obsessed with politics. Little sister (Jackie is the eldest of three daughters) always read the funnies." She laughs, turns serious, shifting again her train of thought.

"You know what we need to do? We here in Irving? We need to stop building and start *repairing*. We're building too many new, unnecessary roads. We need to repair, then build."

Roads are among Jackie's earliest memories. Her Bear Creek ties run deep, beyond her West Dallas birthplace, from which she moved at the age of eleven to a hollow hamlet "where the roads were dirt and stumps were all over. We'd slosh home in the mud, couldn't drive to save ourselves and had to hike to school. I met Jimmy about then—we were just kids." She laughs. "He was seventeen, I was fifteen." Laughs again. "I knew I couldn't help fallin' in love.

"You know, Jimmy's boyhood dream was to build a store. He was raised close to Terrell. His parents were sharecroppers, and he used to walk to a store that a white man owned. That man was a hero of Jimmy's. He used to give him candy and stuff. Jimmy always wanted a store just like his. He talked about it the whole time we were courtin'.

"When we got it . . ." She's laughing now. ". . . it wasn't anything like he thought it would be. He didn't last long. So who's kept the store? Me, that's who."

But nowadays, Jimmy works a full day at Dresser Industries, then comes home to mind the store while Jackie attends meetings, civic functions or political rallies. "He's a good man," she says. "You oughta see him play jacks with the kids in here, always sayin', 'Mistuh Jimmy, would you play us some jacks?' Whoooooee! He'd kill me if he knew I'd told that!"

Playing jacks, checkers, tuning in jazz, rock, even country blues—these are the lighter aspects of Jackie Townsell's lighter side. "I enjoy being alone at night, coming back from a meeting or a talk. I can think then.

"And, no, I don't enjoy campaigning. I hate it. Beatin' on doors, runnin' here, runnin' there—it'll wear you out. Some of my friends said, 'Jackie, you're crazy! We wouldn't do that for nothin'!'

"I never, as a big girl or a little girl, thought I could be a politician. I didn't even know what a politician was. I always wanted to be a secretary. Takin' messages, typin'—that's still a dream of mine.

"Am I serious? Of course. And I will never, ever run for higher office. By the time this is over, I'll be old and gray . . ."

And Jackie Townsell laughs again, at herself, with you, a warm sound that sticks to the ribs of your mind through the after-lunch afternoon.

LOCAL GOVERNMENT RIGHTS MUST BE PRESERVED

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. LENT. Mr. Speaker, as the Congress is in one of its budget-conscious periods this week, I believe it is appropriate to discuss what I view to be a misapplication of Federal funds which has gone virtually unnoticed outside of

the New York Metropolitan area. In specific, I refer to a proposal put forward by the Tri-State Regional Planning Commission staff which recommends that an additional 40,000 units of low income housing be constructed in Nassau County, N.Y., between 1980 and 2000.

The Tri-State Commission, pursuant to the Intergovernmental Cooperation Act of 1968, is delegated the authority to act as a regional clearinghouse for review of application for Federal aid made by the local governments of New York, New Jersey, and Connecticut. Under the 1968 act, Congress required that "every effort should be made to take into account the viewpoints and objectives of State, local, and regional planning." The very legislation which established the Tri-State Commission states:

It is not the intent of this Act nor shall it be construed to restrict or diminish any powers heretofore or hereafter conferred by law upon any political subdivision of the State or any governmental agency, state or local, included, without limitation, powers related to planning and zoning.

What the Tri-State Commission has done, in violation of its mandate, is propose that the power to zone be taken away from local governments in Nassau County so that a grandiose scheme of "fair share housing" which would provide for the construction of a predetermined number of low income dwellings each year for the next generation, could be put into operation.

What is especially disheartening about this entire affair is that the Tri-State Commission's recommendation was made without the input of the citizens who would be affected by it. The Tri-State Commission is composed of 15 members, five from each of the three member States. Of these 15, only two are elected officials—neither from New York. In fact, there are no suburban New York representatives on the commission, and New York's Governor recently vetoed a bill which would have provided for such representation. A recent editorial in Newsday stated:

Tristate is supposed to conduct regional planning and coordinate federal aid applications for the metropolitan segments of New York, New Jersey and Connecticut. In fact, its bulky bureaucracy has no plan, is unrepresentative of the widely varied jurisdictions involved and has stood by while some suburban communities were short-changed on Federal funds.

Mr. Speaker, sometime in this Congress we will be considering amendments to the Intergovernmental Cooperation Act, and it appears that the trend is toward the establishment of organizations similar to the Tri-State Regional Planning Commission. While I recognize the importance of planning on an areawide basis, it is my sincere hope that we will not forget about the traditional rights and responsibilities of local governments and the taxpayers who must foot the bill. I hope the new legislation will require that the views of local governments be given fair and balanced treatment, so that areawide planning organizations cannot twist the regulations to suit their own needs, and to implement "social engineering" schemes in someone else's neighborhood.

MINIMUM WAGE

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, the debate on legislation to increase the minimum wage has been pervaded by the false belief that an increase in the minimum wage will mitigate poverty. In the following letter from the August 8 issue of the Wall Street Journal, Carolyn Shaw Bell points out that poverty relates to a family's income—not a particular individual's wages. Given the propensity toward multiworker families in today's society, an increase in the minimum wage will not go hand in hand with an increase in a family's income, thus bringing them out of poverty. To the contrary, multiworker families could be disadvantaged by any significant increase in the minimum wage. If employers react to a minimum wage increase by eliminating some marginal jobs, a family where both parents and one older child were employed might have less income due to the unemployment of the wife or child.

What is important to remember is that although economics and statistics can be used coldly to predict what might happen, ceteris parbus; as decisionmakers, we must attempt to predict the side effects of any legislative cures we propose. Ms. Bell's letter urges us to see the human side of the minimum wage issue, and cautions against the argument that an increase in the minimum wage will decrease poverty.

The letter follows:

POVERTY VERSUS MINIMUM WAGE

News items about the minimum wage have repeatedly quoted a figure of $2.93 or "about $2.95" per hour as the "federally established" poverty line. In fact, no such poverty figure on a per hour basis exists. By including the valid statement that three million workers earn the minimum wage or that six million earn less than $2.65 hourly such reports give a totally erroneous picture of widespread poverty among workers at the minimum wage.

Poverty concerns income, not wages, and poverty varies according to the number of people living on a given income.

The $2.95 per hour quoted comes from dividing the annual poverty-level income for a four-person family by 2,000 hours—the normal work-year. But there are less than four million four-person families in the country supported by one worker, and there is no evidence that they are all in poverty. Of the families of all sizes supported by one worker, two million fell below the poverty level in 1975, but there is no evidence that raising the minimum wage would help them all. To equate an hourly wage that applies to all workers, who may be single or living in a family with other workers, with the minimum income for four-person families is just plain wrong. The battle to raise the minimum wage should not be fought on the grounds of poverty.

CAROLYN SHAW BELL.

In addition, Mr. Speaker, the August 29 edition of Time magazine contains an enlightening article on the plight of the American underclass. These untrained and undertrained individuals face innumerable bars to employment, one of which is an unnecessarily high minimum wage. The most important step in improving the situation of the poor is for them to secure employment; it is an erroneous assumption for us to believe that we can legislate the poor—many of whom are unemployed—out of poverty by increasing the minimum wage. As the Time article suggests, one way to increase the employment of teenagers would be to subsidize a portion of each youth's wages, thus promoting hiring of the young. In the absence of a youth wage subsidy, we should enact a minimum wage differential for teenagers, to encourage employers to invest in the training of young people. A portion of the article of particular interest follows:

There is also a great need to tear down, or at least lower, the many barriers to employment that confront the unskilled, the unlettered and the immobile. One obvious bar is the overly strict and exclusionary union apprenticeship rules. They should be relaxed—despite the howls certain to come from trade unionists.

A still more controversial barrier to employment is the minimum-wage law. Now $2.30 an hour, the minimum will probably be raised by Congress to $2.65 next year and around $3.15 by 1980. Of course, the talents of many members of the underclass—particularly the unskilled young—are not worth that much off the street. Employers would rather hire someone who shows more evident promise of further promotion—or not hire at all. The minimum wage, says Sociologist Riesman, is the product of "an alliance of the better situated labor unions with the liberals against the deprived and the elderly, whom people would otherwise employ for household or for city work that now doesn't get done." Adds Stanford University Labor Economist Thomas Sowell, a black: "Talk about people being unemployable is just so much rubbish. Everybody is unemployable at one wage rate, and everybody is employable at another." Perhaps not quite everybody. In a free economy, there will always be some small fraction of people who lack the skills or discipline to work. But there is a lot of work that needs doing—cleaning up parks, repairing abandoned buildings, taking part in the burgeoning service trades—at reasonable wages.

Congress has been considering a proposal to reduce the minimum wage for all teenagers to 75% of the adult minimum, but that might just inspire employers to hire well-schooled middle-class youth at the expense of older workers. A better compromise, suggested by Harvard Economist Martin Feldstein, would be for the Government to subsidize minimum-wage payments to the youthful unemployed. Directed specifically to the underclass, the program would allow businessmen to pay a fraction of the cost for jobs that they might otherwise refuse to fill. Another wise Government investment would be to shift some federal funds to more and better mass transit, which, beyond all its benefits to the environment, would give the underclass access to all the new job opportunities in the suburbs.

THE REAL CANAL "GIVEAWAY"

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. OTTINGER. Mr. Speaker, few national issues have been so clouded in rhetoric and emotion as the recent Panama Canal Treaty. Perhaps, the

clouds can be cleared for a moment for people of all persuasions to see some of the real questions which this treaty poses.

On Tuesday, September 6, 1977, Tom Wicker's article in the New York Times described the challenge which the real canal "giveaway"—giving away our relations with all the Latin American nations for the future—poses to our Nation. I submit for the RECORD the text of the article by Mr. Wicker:

THE REAL CANAL "GIVEAWAY"

It's now evident, if anyone ever doubted it, that deep and emotional hostility to the "giveaway" of the Panama Canal presents the Carter Administration and the Senate with a powerful challenge. Perhaps even more so than in the case of the Vietnam War, the test is whether the American people, governed as they are, can adapt themselves sensibly to a changing international order.

The Panama issue is not beclouded by the patriotic need to "support our boys" in combat or the presumed necessity to "stop Communist aggression." Rather, in this instance, the nation is being asked to do what Britain, France, Belgium, Portugal, the Netherlands have already done with varying degrees of reluctance—given up colonial outposts no longer vital to their economic or security needs, whose people are no longer willing to accept outside domination, and whose continued subjection to it would inevitably lead to political disaster, possibly to lingering and unwinnable guerrilla war.

So there's only one real question about the Panama Canal treaties evolved by negotiators for the Ford and Carter Administrations, and scheduled to be signed by Panama and the United States in Washington on Sept. 7. Can the United States yield a major colonial holding by an orderly political process and after negotiations pursued over 14 years and through four administrations of both major parties?

The answer is not clear because of the American treaty ratification process. Two-thirds of the Senate must vote to approve the canal treaties; senators are elected by the people; popular opposition to the treaties is widespread; hence senators who know better may be forced by their constituencies to vote against treaties that in other governing systems would be more nearly subjects of executive decision.

The arguments Mr. Carter and his lieutenants can make for the treaty are ample and persuasive—if heard with an open mind. The canal is no longer vital to American commerce, either for coast-to-coast traffic or international trade; it is now of small military importance; most major naval vessels of today and the big oil supertankers are too wide to use the canal; and in any case, the treaties amply provide for the neutrality, openness and military protection of the waterway.

Panama, moreover, passionately and understandably aspires to control of its own territory and to a greater share of the economic benefits the canal still yields. Latin-American nations without exception, even those with right-wing governments, support Panama's demands. Nothing could be more advantageous to the United States among these nations, or in the third world generally, than a peaceable transition in Panama—and nothing would be more disastrous than American refusal now to ratify treaties so long and difficult in the making.

Against this compelling case, Senator Strom Thurmond states the absurdity that a canal across the middle of Panama is "a United States canal adjacent to Panamanian territory." Ronald Reagan inaccurately states that most Latin-Amerlcan nations have "depended upon the knowledge that the canal will be run impartially and efficiently by the United States"—which not only ignores the support of these nations for Panama but none too subtly implies that Panamanians could not run the canal "impartially and efficiently."

Actually, most treaty opposition seems based on factual contentions less than on a vague but visceral feeling that the United States has let itself be "pushed around too much," that the canal symbolizes American power and that somehow the power itself, rather than the symbol, is about to be relinquished.

It is to this understandable if uninformed sentiment that treaty opponents appeal when they speak of a "giveaway." That was the word employed by John S. Buckley, aged 24, the new national chairman of Young Americans for Freedom; and that was the word also used by former Treasury Secretary William Simon, who—unlike Mr. Buckley—is old enough to know better, particularly since the treaties are supported by his former colleagues, Gerald Ford and Henry Kissinger.

Mr. Simon did not specifically oppose the treaties and, upon studying them, he no doubt will come to see that they do not "give away" anything either worth having or securely held. If anything, to reject the treaties now would be the real "giveaway"—of the possibility of a peaceful and equitable solution to the nation's oldest and most difficult problem of hemisphere relations, and of the distinct political and diplomatic gains likely to be made from the new situation.

What would approving the treaties say to our allies around the world, Mr. Reagan has asked, "about our leadership intentions, our international role . . . our national defense capability?" It would say that the United States, if not all its political leaders, has grown up in its world view and in the uses of its power.

VA OUTPATIENT CLINIC FOR BROWARD COUNTY

HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 8, 1977

Mr. BURKE of Florida. Mr. Speaker, I rise today to advise my colleagues of the introduction of a bill to provide for the establishment of a Veterans' Administration outpatient clinic in Broward County, Fla.

In 1967 when I was sworn in as the Congressman for Broward County, Fla. I started working for improved veterans services for my constitutents. I have sought in each of my five terms in the House of Representatives to establish a veterans hospital in my county.

Despite the obvious need for such a facility, the Veterans' Administration has repeatedly refused to establish any kind of medical facility in the county. Although I can recognize and appreciate the need for evaluation procedures and study methods by the VA, I also recognize these methods are too slow to cope with the fantastic growth in Broward County. When I moved to Broward County in 1949, there were 50,000 people living in Broward County. Today there are 1 million people living in the same geographic area; 116,000 by current estimates, are veterans. 116,000 is a large population. In fact, it approaches the population of cities such as Riverside, Calif., Lubbock Tex., Lexington, Ky., and Worcester, Mass. To deny a population of 116,000 veterans a medical facility within easy access is contrary to the intent and purpose of the Veterans' Administration. But that is essentially what is happening. The nearest VA hospital is in Miami which is 24 miles from the Broward County seat of Fort Lauderdale. The distance to the nearest VA outpatient clinic in West Palm Beach is 40 miles. Public transportation to these facilities is inadequate where it exists at all and it does not exist in many places because local governments have not been able to keep up with the tremendous growth in population. Therefore, Broward County's 116,000 veteran population are faced with at least a 30-mile trek to a VA facility. The Miami Veterans Hospital is completely bogged down with work because Dade County is also growing rapidly and veterans are also moving into that area as well as into Broward. The result is that Broward veterans must wait hours to see a doctor. Because of waiting cases the doctor may be able to give only a perfunctory examination which may not be what the veterans deserve. The outpatient clinic set-up at West Palm Beach, which opened on July 12, 1976, is more remote and inaccessible to Broward County veterans, and services are far more limited.

Mr. Speaker, as days go by the need for a VA outpatient clinic becomes more pressing in Broward County. It is estimated that between 800 and 1,000 veterans move into Broward County each month. The facilities available to them in Miami and West Palm are already insufficient. Despite this, the Veterans' Administration advises that it has no plans at this time for the establishment of an additional medical facility in Broward County. I hope that my colleagues will agree with me that these 116,000 veterans living in Broward County deserve better treatment by the VA and I hope you will join with me in supporting my bill for establishment of such a facility.

U.S. UNICEF IS A TRICK, NOT A TREAT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. McDONALD. Mr. Speaker, with Halloween and Christmas drawing near, UNICEF supporters in the United States will again be attempting to use our children to collect money and persuade Americans to send out their atheistic Christmas cards. Appropriate posters will be displayed showing UNICEF feeding milk to hungry children. But where does your contribution go? Three out of every four dollars goes to overhead, Forbes magazine recently learned. The item from Forbes dated September 1, 1977, follows:

U.S.' UNICEF IS A TRICK, NOT A TREAT

When a Forbes reader recently received his regularly scheduled appeal for funds from

the United States Committee for UNICEF, he decided to check with the National Information Bureau (Forbes, Mar. 1, p. 16) and learned the following:

"An inserted correction to the U.S. Committee's 1975 annual report indicates that the $8,314,287 'allocated to UNICEF' by the Committee 'includes payment of the direct production costs of greeting cards and calendars incurred by UNICEF itself, estimated to be $1,521,000.' In a footnote to the annual report, the Committee states that reported expenses of its own activities, totaling $4,014,960, do not include these direct production costs."

"By the NIB's estimate, using the U.S. Committee's formulas, about 26 cents out of every dollar raised by card sales was available to UNICEF for its program activities."

In other words, relatively few of the pennies collected by Halloween Trick or Treaters and only 26 percent of the funds raised by Christmas card sales get to UNICEF for its purposes.

Trick or treat?

AIRBAG ALERT: NHTSA AIRBAG DEMONSTRATIONS PHONY

HON. BUD SHUSTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. SHUSTER. Mr. Speaker, the National Highway Traffic Safety Administration, NHTSA, is engaging in a deceptive campaign to win public support for the Federal order mandating airbags/passive restraints in all cars beginning in 1981.

NHTSA officials have been traveling around the country and showing Members of Congress an airbag demonstration using a specially designed simulator.

The demonstration is a phony!

The NHTSA zealots, in an attempt to win public support for the airbag, are deliberately misleading the public by using an airbag simulator that is substantially different from the airbag you would get in a car. The airbag in the demonstration vehicle inflates in 4 to 5 seconds, or about 20 times slower than it would inflate in a production vehicle.

Therefore, the noise level is also substantially lower and the startling effect less pronounced than in a real crash situation.

The airbag in the demonstrator is also repacked, which would not be possible after an airbag deployment. The fact is that the entire airbag system must be replaced at a cost 2½ to 3 times greater than the factory installation cost.

Repacking the airbag in the NHTSA airbag show, even though a disclaimer is announced before the inflation, could lead many people to conclude wrongfully that a deployed airbag can just be repacked and used again, instead of replaced.

Other distortions in the demonstration include:

The airbag simulator deflates much slower than an actual deflation, thus indicating erroneously that protection might be extended for secondary impacts.

Nitrogen tanks are used to inflate the airbag in the demonstration, despite the fact that both NHTSA and most airbag manufacturers have indicated that new-generation airbags will be detonated with sodium azide, which is a highly toxic and explosive chemical compound.

The NHTSA airbag show is a phony, from start to finish. Even though the demonstration is explained at the beginning, viewers could quickly forget what they heard because of the dramatic impact of the exploding airbag.

I seriously question the appropriateness of Federal officials, at taxpayers' expense, traveling around the country promoting a particular point of view. The Federal Government is supposed to be impartial and objective, and not take part in selling the American people on their products.

I urge everyone who sees this demonstration to keep in mind that what they see is not what they will get if they are forced to buy an airbag. Rather, they will get an unproven, costly, high technology device which may or may not work.

MAYOR MICHAEL A. BILANDIC OF CHICAGO

HON. MARTY RUSSO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. RUSSO. Mr. Speaker, recently I was pleased to have the opportunity to serve as honorary chairman of a dinner honoring our esteemed Chicago mayor, Michael A. Bilandic. Mayor Bilandic was chosen by the Jewish National Fund of Chicago as the recipient of their coveted Boneh Israel/Builder of Israel Award.

Today I would like to tell my colleagues a little about our new mayor and also share with them the remarks I made on the occasion of the dinner honoring him.

Mayor Bilandic has been a life-long resident of Chicago. He received his B.S. degree from St. Mary's College, Winona, Minn., and juris doctor degree from De Paul University College of Law.

During World War II he served as a first lieutenant in the Marine Corps in Pacific campaigns. Prior to his service in the Pacific, he was graduated from the Marine Corps V–5 program at the University of Notre Dame.

After becoming a member of the Illinois Bar, Mayor Bilandic engaged in the private practice of law. He has also served as a master in chancery of the circuit court of Cook County and is a former special assistant to the Illinois attorney general.

As a member of the city council, he had served as chairman of its committee on finance since 1975. He was also chairman of the council's committee on environmental control and vice chairman of the committee on committees and rules.

He is a member of the board of directors of the Central YMCA Community College and the Valentine Boys Club, and he serves on the Law Council of De Paul University College of Law.

He was elected mayor of Chicago on June 6 of this year after serving as alderman of Chicago's 11th ward for 8 years. At the time of his election he was the acting mayor chosen by unanimous vote of the Chicago City Council to fill the vacancy created by the death of the late Mayor Richard J. Daley.

Following are the remarks I made at the dinner for the mayor and I welcome the opportunity to place in the CONGRESSIONAL RECORD my own thoughts on this outstanding public servant:

REMARKS OF MR. RUSSO

It is with great pride and pleasure that I am here tonight in the capacity of Honorary Chairman of this dinner honoring our distinguished mayor, Michael A. Bilandic.

The Jewish National Fund of Chicago is an organization whose extremely worthwhile cause is to bring about social renewal and justice not only for the Jewish people but for all of humanity. This evening, the Honorable Michael Bilandic is the recipient of the Jewish National Fund's most prestigious award, the Boneh Israel/Builder of Israel Award. The members of the fund have done well by their organization in honoring our mayor tonight for he too is dedicated to that very same cause not only for the residents of Chicago but for all of humanity as well.

Mayor Bilandic is truly a unique individual who possesses the qualities of a superior leader. He retains both a keen awareness and sensitivity to the needs and desires of those whom he represents and is devoted to the prosperity of our great community. Chicago has long benefitted from his outstanding service and thus will continue to reap the benefits of his guidance now more so than ever since his election as our new mayor.

Being conferred upon him this evening is an award which establishes a forest in the Judean Hills of Jerusalem that will bear the name of Mayor Michael Bilandic forever. Please know too, your honor, that both our city and our hearts will also forever bear your name. I am confident that all of the members of the Jewish National Fund and the residents of Chicago join me in congratulating you for this great honor being bestowed upon you this evening and in wishing you continued success in all of your future endeavors. Thank You.

"FRIENDS" IN SOUTH KOREA?

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. JACOBS. Mr. Speaker, it is regrettable that on yesterday the House chose not to send a clear message to the Government of South Korea with regard to its harboring of a fugitive from justice in the United States.

Two amendments to the budget resolution were offered on this subject.

The first, in effect, simply said to the South Korean Government, "Stop harboring the fugitive or we shall stop sending you bread."

I offered the second amendment which, in essence, said to the South Korean Government surrender the fugitive from American justice you are harboring or we shall not only stop sending you bread but also military equipment.

Question. Why would a dictator care whether we supply him with bread to give his people so long as we continue supplying him with guns to keep them

in line? Which amendment could really be expected to bring back the fugitive?

We hear a lot about our friends here and there in the world in argument for our tax money to help them. It seems that our "friends" in South Korea are the proverbial friends in need who are not all that friendly when it comes to a tiny gesture of reciprocity.

TAX DEDUCTION FOR REMOVAL OF DISEASED TREES, H.R. 8844

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. FRASER. Mr. Speaker, I have introduced legislation to permit property owners to deduct tree removal costs from their Federal income taxes when such removal is required by Federal, State, or local law as part of a program to control the spread of tree diseases caused by pests.

Urban trees are an important feature of our living environment. They enhance our neighborhoods and increase property values. They also reduce erosion and air pollution. In cities they are especially desirable because of their general adaptability to varied environmental conditions.

However, a variety of tree pests have become rampant in our cities. These include infectious diseases of relatively minor incidence such as oak wilt, persimmon wilt, maple wilt, and sycamore canker. One of the most dramatic examples of major plant pests affecting large numbers of communities throughout the country is Dutch elm disease (DED).

We in the Midwest are all too familiar with the devastating effects of this tree disease. Since DED was brought from Europe in 1930, more than half of our American elms have been killed. The Northeastern States have lost more than 75 percent of their elms in urban areas. The disease has spread through 41 States.

Effective tree pest control programs require prompt removal of afflicted trees. Well over 30 States have statutes requiring owners to remove their infected trees at their own expense once they are considered a threat to adjacent property or to the environmental quality of the affected community or State. In 1975 the Minnesota State Legislature passed a law requiring property owners to remove their trees when evidence of the disease is found. Since early May the Minneapolis Park Board has identified more than 5,000 diseased elms which must be removed at an average cost of $300 per tree.

If these trees were damaged by hurricanes or fire, the owners would be allowed to deduct casualty losses for income tax purposes. Yet under current law, they may deduct neither the loss of a valuable tree nor the cost of the tree removal required by State law for disease control.

I believe my proposal to permit a deduction for the cost of removal, as required by Federal, State, or local law, is a reasonable way to subsidize the cost of compliance, which is the essential element of a tree pest control program. The deduction will not fully reimburse the cost of removal, but it will provide some assistance to property owners.

The following is a text of the bill:

[H.R. 8844, 95TH CONG., 1ST SESS.]

A bill to amend the Internal Revenue Code of 1954 to allow a deduction for the cost of removal of trees required by the United States or a State or local government to be removed to prevent the spread of diseases caused by pests

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part VII of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to additional itemized deductions for individuals) is amended by redesignating section 221 as section 222, and by inserting after section 220 the following new section:

"SEC. 221. REMOVAL OF TREES TO PREVENT THE SPREAD OF DISEASE CAUSED BY PESTS.

"(a) DEDUCTION ALLOWED.—In the case of an individual who is an owner of real property, there shall be allowed as a deduction all reasonable and necessary expenses paid in the taxable year by such individual for the removal and disposal of trees on such property required by the United States or a State or local government to be removed to prevent the spread of a disease caused by pests.

"(b) PEST DEFINED.—For purposes of this section the term 'pest' means any insect, nematode, protozoan, or other invertebrate animal, any virus, and any bacterium, fungus, or other member of the plant kingdom, which is capable of causing serious disease in, or serious injury or damage to, trees.".

(b) The table of sections for part VII of subchapter B of chapter 1 of the Internal Revenue Code of 1954 is amended by striking out the last item and inserting in lieu thereof the following items:

"Sec. 221. Removal of trees to prevent the spread of disease caused by pests.

"Sec. 222. Cross references.".

SEC. 2. The amendment made by the first section of this Act shall apply to taxable years beginning after the date of the enactment of this Act.

YOUNGSTOWN'S CHAMPIONS

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. CARNEY. Mr. Speaker, I would like to take this opportunity to commend the Youngstown Midget Athletic Boosters on their outstanding performance at the Little League World Series, held in Williamsport, Pa., from August 23 through August 27, 1977.

The roster of players is as follows: Danny Lewis, Vincent Miller, "Tony" Copeland, Jeff Stofko, Jimmy McCarthy, Mark Ross, Billy Hupp, Paul Harris, Chip Griffin, Terry Farris, Ray LeLuco, Mark Boyd, Gary Housteau and Ron Jones. I would also like to commend the team manager and coach, Mr. Tom Harris and Mr. Bobby Miller, for their fine work with these youths.

The Youngstown Midget Athletic Boosters won 19 straight games to qualify for the Little League World Series. The first team from Ohio to represent the central United States in Little League World Series play, the Boosters placed fourth in the United States and sixth in the world.

These fine youths have brought athletic distinction to themselves and to the 19th Ohio District through their impressive accomplishments in tournament play and championship competition. I congratulate them and wish them success in the coming season.

TRIBUTE TO SONNY JURGENSEN

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. FAUNTROY. Mr. Speaker and Members of the House of Representatives, I am proud to present the following statement on behalf of one of the most outstanding citizens of the National Capital area—Christian Adolph (Sonny) Jurgensen, former quarterback of the Washington Redskins football team.

The statement is as follows:

STATEMENT OF CONGRESSMAN WALTER E. FAUNTROY CONGRATULATING FORMER WASHINGTON, D.C. REDSKIN QUARTERBACK, SONNY JURGENSEN

I have been an avid Washington Redskin fan ever since, as a boy, I used to climb the tree behind the right field fence at old Griffith's Stadium to watch the likes of Sammy Baugh and Andy Farkus display their considerable skills on the football field. I never had the opportunity, however, to observe these Redskin heroes function as concerned community leaders.

But Sonny Jurgensen's support of young athletes in the Washington, D.C. area, coupled with his matchless skills as a player, have combined to make number 9 my number one hero.

The record books have recorded all of his outstanding achievements as a gridiron quarterback, but his greatest achievement will not appear in National Football League statistics. His greatest achievement will be recorded among the people of this community. That great achievement is his establishment of a scholarship fund for Washington area athletes attending Washington area universities and colleges. Such an effort will ultimately produce his most outstanding victory. I salute him for having the vision to see that, with the soaring cost of higher education, some of our most promising young people may find the application of their athletic prowess the only way they can pay for an education and thus prepare themselves for useful and productive lives in our society. I salute him for the vision to see that all of us cannot be Sonny Jurgensens; all of our athletes will not go off to the Duke Universities and the Notre Dames of the world. Most will never get into professional athletics. But how many Washington area youth, inspired by the example of Sonny Jurgensen and helped by this scholarship fund, will go on to appropriate the lessons of college athletic competition as college trained citizens whose skills are so desperately needed today and in the future for the continued growth and strength of our Capital City and our Nation.

I am pleased to join thousands and thousands of Washington Redskin fans to salute him and thank him for always giving us a superlative effort as a professional football player and as a community leader.

FEDERAL WATER POLICY

HON. JAMES P. (JIM) JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. JOHNSON of Colorado. Mr. Speaker, the reaction to the present administration's proposals to overhaul this Nation's water resource policy has been predictable. The comment from those who live east of the 100th meridian reflects the thinking of people who have always lived with an abundance of water. Those in the West, who have learned to live and work in an area that is scarce in that vital resource, have responded with a mixture of amazement that Federal officials could be seeking such a simplistic solution in such a short period of time; and determination that water laws and water rights in the West shall not be abridged or diminished. We have many articulate spokesmen and women for water resource development in Colorado and I want to offer a sampling of opinion on this crucial subject. The following material was excerpted from a statement to the Water Resources Council by Fort Collins, Colo., attorney Ward H. Fischer and reprinted in the Denver Post.

"COLORADANS ARE TERRORIZED" BY FEDERAL WATER POLICY REPORT

(By Ward H. Fischer)

How prone to doubt, how cautious are the wise.—Homer.

There is nothing more frightening than active ignorance.—Goethe.

These comments concerning the "Water Resource Policy Study" are submitted on behalf of the Cache la Poudre Water Users Association, the Thompson Water Users Association; and the Jackson County Water Conservancy District. . . .

In responding to the study, it is difficult to find language which is both accurate and temperate. Many of the assumptions are so erroneous and ill-conceived as to tempt one to a scathing denunciation of the quality of the effort.

On the other hand, I am certain that the drafters of this document (the Water Resource Policy Study) approached their task with good will and on the assumption that they were proposing alternatives truly beneficial to the citizens of the United States.

Even recognizing this, we must observe that good faith alone cannot excuse ineptitude. The history of civilization demonstrates that more harm has been done to the common good and general welfare by zealous and uninformed reformers than by the deliberate exercise of evil intent.

Nor do good intentions justify a statement such as "a final problem may arise from the fact that many rights are not evidenced by any record and many that are have not been adjudicated and specifically quantified. This circumstance leads to uncertainty. . . ."

It is supposed deficiency in state law which is alleged to create this problem, and the study proposes that the states be made to shape up.

This is hypocrisy personified. If those who prepared this paper had any knowledge of the subject, they would know that, by and large, water rights in the Western states are adjudicated or otherwise matters of record. The one entity which has refused to voluntarily adjudicate its rights is the U.S. government. It has resisted through the highest courts of this land the requirement that it submit its claims for adjudication. . . .

The basic premise of the policy study as a whole is that the United States does not have a basic water policy; and that it needs one because state policies are inept. . . .

Contrary to the study's assumption, there is a federal water policy. It is enunciated in the Homestead and Desert Land Acts, passed in the 1860s and 1870s. According to the U.S. Supreme Court:

"The effect (of these statutes) was to recognize, so far as the United States are concerned, the validity of the local customs, laws, and decisions of the courts in respect to the appropriation of water.

"What we hold is that following the Act of 1877, if not before, all non-navigable waters then a part of the public domain became *publici juris*, subject to the plenary control of the designated states. . . .

"(The Desert Land Act) simply recognized and gives sanction, insofar as the United States and its future grantees are concerned, to the state and local doctrine of appropriation, and seeks to remove what might otherwise be an impediment to its full and successful operation."

With the federal policy thus legislatively announced, the Western states did assume control of their water resources. As a result, these Western lands, thought inhospitable by the early pioneers, and designated in old journals as the Great American Desert, were developed.

Agriculture prospered, great cities grew, industry flourished, all of which ought to be apparent to any observer, including authors of studies if they journey west of the Mississippi River.

To know the history of this area, to see it now, and to conclude that the West is in dire need of a federal water policy in order to survive, surpasses credulity. . . .

To the extent that water projects are indeed those of the federal government, it is perfectly proper that that government debate and define their goals and objectives before authorizing them.

I would suggest that the determination of such goals and objectives is properly made by the Congress, rather than the bureaucracy; but with that qualification I believe that no person would object to the establishment of these goals and objectives on the federal level if done prior to authorization so as to avoid violation of vested contractual rights.

That does not mean that they will necessarily be good or even sensible goals, but only that they are indisputably federal ones.

One cannot, however, fail to be amused at the inconsistencies presented in the study, even on this issue. On the one hand, it is argued that present federal policy subsidizes agriculture; that subsidies are not fair or proper; and that subsidies of any nature should, therefore, be dispensed with.

On the next page, great concern is expressed that social and environmental objectives must be subsidized if they are to compete in the market system advocated on the preceding page. . . .

When we turn from federal projects per se, then the federal government should not attempt to dictate state water policy. . . .

In the Western States, including Colorado, water is a rare and precious resource.

We really do not need the federal government to advise us of that fact, or instruct us in its use. The great bulk of our irrigation projects in Colorado are not, as the report paper would like to assume, the result of federal action. On the contrary, they have been privately developed by those who use the water.

Water so developed is expensive. To suggest that the citizens of this state, or of the Western states, are so stupid that they will spend great sums of money, and engage in great labors in the development of water, for the purpose of wasting it, and without concern for its efficient and proper use, is an insult. To suggest that Washington-based officials must persuade Coloradans to make efficient and proper use of this resource is irritating.

I had hoped that with our experience in this country in the past 20 years, we had all learned that our social, political and economic structures are so complicated and inter-related that anything which is done in one area of endeavor has inevitable, but unknown, effects upon another area.

I had hoped that our national leaders had realized that the complexities of today's world do not admit of simple solutions.

The water resources policy study presents clear-cut "problems" which are erroneous in their assumption. Equally clear-cut and simplistic solution options are suggested, in the apparently confident expectation that they can and should be implemented by federal fiat.

Both the problems and the solutions will undoubtedly receive the enthusiastic applause of the uninitiated. In these times of drought, and of general concern over our water resources, I have observed that the easiest way for a public official to obtain newspaper headlines and acceptability among his peers, is to make a speech denouncing any state's water laws and procedures, and to advocate that if the water resources of the state, or the country, were only put under his direction, the prosperity of the nation would be greatly enhanced.

I have further observed that when these same officials are confronted with the very complex hydrological facts related to the Western streams, reservoirs, and underground water supplies, they quickly retire from the field, and develop instead an expertise in energy, the Middle East, or African relations.

Those who persist can in time become knowledgeable, and with that knowledge, they will conclude that the water laws and policies as administered by the individual Western states are phenomena of efficiency and flexibility, contributing immeasurably to the public good.

If the ill-advised options contained in this report had been prepared by knowledgeable state officials, the water users would have been deeply disturbed and concerned.

When it is prepared and presented by those who are obviously ignorant of the laws, customs, procedures, water rights, hydrology, and use of water in the Western states, we Coloradans are terrorized.

125TH ANNIVERSARY OF SAN FRANCISCO'S THIRD BAPTIST CHURCH

HON. PHILLIP BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. PHILLIP BURTON. Mr. Speaker, my brother and colleague, JOHN BURTON, joins with me in extending to the pastor and members of the congregation of Third Baptist Church in San Francisco our sincere congratulations on the occasion of the celebration of the 125th anniversary of the founding of the church.

Their distinguished pastor, the Reverend Amos C. Brown, follows in the illustrious footsteps of the Reverend F. D. Haynes and the late Reverend F. D. Haynes, Jr. He continues a tradition of community service for which Third Baptist Church has been most justly renowned.

When Third Baptist Church was setting down its roots in San Francisco, California had been admitted to the Union but 2 short years and the colorful era of the gold rush was still a fact of everyday life. For 125 years, Third Baptist Church has served the needs of its congregation and has been a force for social advancement in our city.

Tonight, the Reverend Ralph Abernathy and Ambassador Andrew Young will be in San Francisco to join in a very special commemoration of this anniversary.

Congressman JOHN BURTON and I want to call this 125 years of service by Third Baptist Church to the attention of our colleagues, who I am sure join with us in expressing congratulations.

A TRIBUTE TO C. MARSHALL DANN, COMMISSIONER OF PATENTS AND TRADEMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. BOB WILSON. Mr. Speaker, I wish to pay tribute today to Commissioner of Patents and Trademarks C. Marshall Dann, who returned to private life at the end of August.

Commissioner Dann has served with great distinction as the head of the Patent and Trademark Office in the Department of Commerce for the past 3½ years. He is the 42d Commissioner and by all accounts has been one of the most successful ones. He has worked hard to strengthen the contributions patents and trademarks make to the American economy.

He has instituted new procedures to improve the quality and reliability of issued patents. Under his administration the Office has made progress in international cooperation on patents and trademarks. He helped the Office set records for the highest numbers of patent and trademark applications examined.

Commissioner Dann is a friend of inventors. He has met with many groups of independent and small business inventors throughout the country. I was proud to attend a National Inventors Day ceremony in 1976 at which the Commissioner recognized five Members of Congress including myself who have been awarded patents on their inventions.

The Commissioner has received many honors during his outstanding career including the Robert H. Goddard Award from Worcester Polytechnic Institute in 1975 and the Jefferson Medal from the New Jersey Patent Law Association in 1976. With the support and cooperation of the Patent and Trademark Office employees he has helped make that Office one of the more effective bureaus in Washington.

I ask the House of Representatives to join me in wishing C. Marshall Dann continued success and good health in his future endeavors.

AMERICAN COMMITTEE ON AFRICA: TRANSNATIONAL SUPPORT FOR TERRORISM

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. McDONALD. Mr. Speaker, the American Committee on Africa (ACOA) has for more than two decades served as the principal U.S. support group for Marxist terrorist movements on the African continent. The beneficiaries of ACOA money and organizational expertise have ranged from the Algerian National Liberation Front through the MPLA and FRELIMO organizations which now control Angola and Mozambique to the so-called Patriotic Front in Rhodesia whose principal victims have been black Rhodesian civilians.

The American Committee on Africa provided my office with an 11-page booklet, "Meeting Africa's Challenge: The Story of the American Committee on Africa," written by George M. Houser, executive director of ACOA since its creation.

Available from ACOA, 305 E. 46th Street, New York, N.Y. 10017 [212/838–5030], the ACOA booklet details how impetus for formation of ACOA and its predecessor came from the African National Congress (ANC), an organization controlled by the South African Communist Party (SACP) which under SACP leadership a few years later commenced an active and continuing terrorist campaign against South African civilians.

According to ACOA's executive director and historian, impetus for the organization of ACOA came from the London meetings in 1951 of U.S. black activist Bill Sutherland with the editor of the ANC newspaper, African World, who told Sutherland about the planned "Defiance Campaign" in South Africa then being organized by the SACP through its racial fronts, the ANC and the South African Indian Congress.

At that time Houser was race relations secretary of the socialist-pacifist Fellowship of Reconciliation (FOR) and executive secretary of the Congress of Racial Equality (CORE) and had worked with Sutherland in the disarmament movement being coordinated by the Soviet-controlled World Peace Council (WPC). After his return to the United States, Sutherland approached Houser with the news of the planned ANC campaign. Then, as Houser has written:

> We wrote to Walter Sisulu, the secretary general of the African National Congress, and Y. A. Cachalia of the South African Indian Congress * * *. They responded eagerly, and in New York we decided to set up an ad hoc organization, which we called Americans for South African Resistance, in support of this campaign."

Almost simultaneously with the commencement of the SACP and ANC-led Defiance Campaign on June 26, 1952, Z. K. Matthews, head of ANC's Cape branch, arrived in New York as a visiting professor of world Christianity at Union Theological Seminary. The New York based ANC leader was kept constantly informed of progress being made at home. Houser continued:

> Armed with this information, Americans for South African Resistance (AFSAR) issued a series of bulletins. * * * Over the six months that the campaign proceeded (with over nine thousand arrests), AFSAR * * * raised several thousand dollars which, through Z. K. Matthews, was sent to the ANC.

Houser also admitted that AFSAR's purpose in preparing the bulletins based on ANC leader Matthews' information was not nonpartisan education but an effort to spread the word on what we in the United States could do to support the campaign.

Following the collapse of the defiance campaign early in 1953, AFSAR had to reassess its purpose. Its leaders felt it should broaden its role to support of the coming challenge to imperialism and colonialism.

It is noted that cofounder Sutherland, now 59 and active during the 1940's in the New York CORE chapter, moved to Africa in 1953 where he worked for the Ghanian Government. In association with the aging Pan-African theoretician, George Padmore, Sutherland aided in organizing the 1958 All African Peoples Conference in Accra which was attended by young Soviet-alined militants like Patrice Lumumba and Joshua Nkomo; Kenneth Kaunda, now President of Zambia; leaders of the ANC from South Africa and representatives of the FLN then in process of waging a successful terrorist protracted conflict against France in Algeria.

From 1963 to 1975, Sutherland was an employee of the Government of Tanzania's Ministry of Foreign Affairs, reported Bilalian News, the newspaper of the militant and violence-prone nation of Islam, and was involved in the organizing of the June 1974 Sixth Pan-African Congress in Dar-es-Salaam. According to the Baltimore Afro-American, the American Friends Service Committee (AFSC), a socialist-pacifist organization which has consistently supported terrorist armed struggle by the Soviet-supported Marxist national liberation movements like the Vietcong, Khmer Rough, Pathet Lao, and southern African organizations, hired Sutherland in December 1974 as its southern African representative. On his 1976 U.S. speaking tour for AFSC, Sutherland described his AFSC post as observer-consultant in Lusaka, where he moved. He said he left the United States in 1953 to become part of Africa's struggle and that he now considers Africa his home and has applied for citizenship. He did not specify what country's citizenship he was seeking.

During the month of August 1977, Sutherland led a 16-member delegation from the AFSC on a tour of the front-line states in Africa to "build relationships with the opponents of the status quo in Southern Africa, particularly the liberation movements."

George Houser himself traveled to Africa in 1954 to make direct contact with leaders of fledgling liberation movements. He returned to Africa in 1958 to

lead an ACOA observer delegation at the All African Peoples Conference where the Algerian FLN was also in attendance. As Houser has written, the ACOA soon became an active U.S. voice and support group for the liberation movements and their representatives in the United States. Many movements responded by seeking assistance in unexpected ways which he defined as including the smuggling of political communiques in hollowed-out books for ACOA to take to the United Nations on behalf of the liberation group.

Supporting terrorism—violent acts against the civilian segment of the population for the purpose of intimidation in order to attain a political or military goal—evidently has never disturbed the American Committee on Africa. According to Executive Secretary Houser, from 1955 to 1962 the ACOA priority was the FLN terrorists in Algeria.

ACOA worked closely with * * * the FLN representatives in New York and at the UN. Numerous public meetings were sponsored to call attention to the Algerian struggle and to condemn the support the US was giving France.

Houser is also pleased to recall that ACOA was the first to display the flag of FLN's Provisional Government at public meetings in New York.

ACOA's main role has been the provision of logistical support, money, and organizational skills so that the terrorist groups could maintain offices in the United States and at the United Nations, so that their statements and position papers could be distributed in the United States to key organizers and the press, and to arrange speaking tours and personal appearances so that the revolutionary leaders could present their cause directly to the American people.

In Houser's own words:

There is not a major liberation movement in southern Africa which has not received some support from ACOA. Much of this has been done through the Africa Defense and Aid Fund. Sometimes the assistance given is to cover the emergency needs of visitors to New York at the U.N., or to liberation movement leaders traveling in the U.S. It may help with travel expenses, accommodations, telephone bills, etc.

He continued:

In the case of some of the liberation movements, notably FRELIMO, ACOA has taken major responsibility for raising the funds to make it possible for the organization to have an office and a full-time representative here.

Houser reports that ACOA's logistical support work has included supplying jeeps, land rovers, Volkswagen buses for the use of liberation movements in Africa. The amount spent, he writes, has varied from 1 year to another but has usually been between $10,000 and $35,000. The Africa Defense and Aid Fund, a part of the committee, has been the principal conduit.

ACOA's aid to liberation movements has not included generous assistance to non-Communist or anti-Communist forces. And following the Sino-Soviet split in the mid-1960's, the ACOA firmly supported the Soviet-sponsored terrorist group over the Peking-backed one unless both were recognized by the Organization of African Unity. Even so, the majority of the support went to the Soviet-supported terrorists.

For example, the UNITA forces which are nationalist and which control a significant amount of territory in southern Angola was not recognized by the OAU and therefore not supported to any real extent by ACOA. The Communist Chinese supported FNLA organization led by Czech-trained Holden Roberto received some minimal assistance; but as Houser noted, "In the case of Angola, a lengthy discussion was held in 1970, and the decision was to recognize the primacy of the MPLA at that time."

ACOA has never had a policy of cutting off contact with a liberation movement said Houser, implying that it could well have unwritten, informal policies to the same end; but this has not implied willingness to assist all movements.

A major proportion of ACOA's work has been pressuring Congress on behalf of the terrorist movements. Houser describes ACOA's Capitol Hill activities in these terms:

Implementation of ACOA policy has frequently centered in Washington. The ACOA has consistently opposed U.S. policies supportive of white minority rule. ACOA representatives have appeared innumerable times before the appropriate Senate and House committees in Washington. Statements by the ACOA on legislative objectives have been varied: U.S. policy in the Congo, refugee questions, an end to the sugar quota to South Africa, stopping military aid to Portugal and South Africa, opposition to the Byrd Amendment (allowing strategic materials to come in from Rhodesia), an end to intervention in Angola. The committee has maintained a working relationship, first, with late Congressman Barrett O'Hara of Illinois and later with Charles Diggs of Michigan, who have been the two very active chairmen of the House Subcommittee on Africa.

Houser goes on to describe the operation of the Washington Office on Africa (WOA):

Not until 1967 did ACOA establish part-time representation on the Washington scene. A full-time office was opened in 1968, with Gary Gappert as the representative. He was succeeded by Charles Hightower. In 1972 the ACOA's Washington office was transformed into the independent, jointly-sponsored Washington Office on Africa, with Ted Lockwood and Chris Root as the executive staff. Funds for ACOA's office had come primarily through contributions of three or four church organizations. These churches (Methodist, Presbyterian, United Church of Christ, and Episcopalian) finally decided they would like to participate more actively on African issues in Washington. Thus the Washington Office on Africa became a jointly-sponsored effort between ACOA and church groups. The Washington Office has been increasingly effective in coordinating work on southern African issues in Congress. A major effort from 1972 to 1975 was devoted to stopping import of chrome and other minerals from Rhodesia. The campaign has gained strength, in spite of a lackadaisical attitude by the White House, but has not yet been won.

ACOA's testimony before committees of the House and Senate began in April 1962, with testimony prepared by ACOA's 1961–71 president, attorney Peter Weiss, in opposition to the independence of Katanga. It has continued with opposition to any U.S. aid to anti-Moscow movements in Angola after the introduction of Cuban troops. The ACOA "independent force which would not be line on the MPLA is that they are an dominated by any outside power, including the Soviet Union."

Although not principally a legal action organization, ACOA has supported U.S. litigation and defense efforts in southern Africa starting with the 1956–59 treason trials of SACP and ANC members in South Africa for which ACOA raised some $75,000 and sent Erwin Griswold, then dean of Harvard Law School, to South Africa as an observer—but not making public the ACOA sponsorship for obvious reasons.

ACOA lawyers and board members including Peter Weiss of the National Lawyers Guild (NLG) and Center for Constitutional Rights, Mrs. Goler Teal Butcher, former counsel to the Diggs Subcommittee on Africa and Africa policy strategist to the Carter Presidential campaign; as well as Douglas Wachholz of the Lawyers Committee for Civil Rights Under Law (LCCRUL), Leonard Meeker of the Naderite Center for Law and Social Policy, and exiled South African attorneys Joel Carlson and Michael Davis have been active in anti-South African legal cases in the last 2 years.

It is noted that another ACOA Executive Board member, Frederick A. O. Schwarz, Jr., took a leave of absence from ACOA to become chief counsel to Senator Church's Senate Select Committee on Intelligence. F. A. O. Schwarz, Jr., in 1969 was treasurer of the American Committee on Africa. Houser, who exchanged correspondence with the Soviet-supported Patrice Lumumba from 1958 until shortly before his assassination in 1960, has commented that "Senator Frank Church's committee investigating covert [U.S.] intelligence activities * * * revealed [that] in 1957 [3 years before a rival Congolese political faction killed him] that the CIA not only opposed Lumumba but actually laid plans for his murder." Houser prefers to leave the impression that the contingency plans which were not carried out caused the assassination of the Congolese leftist months later. Neither does he discuss any possible special interest in the Congo on the part of committee counsel Schwarz.

While the ACOA's political lobbying activities disqualify it from receiving tax exempt status—ACOA dropped its application in the early 1960's when IRS specified in a 7-page letter that there was no chance for approval—ACOA set up a closely associated tax-exempt organization, The Africa Fund, in 1966 through which "programs for refugee assistance, for aid to hospitals and schools in liberated areas of Guinea-Bissau, Angola and Mozambigue have been carried on."

Africa Fund grants in 1975 included $39,165 to the Mozambique Institute, P.O. Box 20773, Dar-es-Salaam, Tanzania, described as "the primary fund-raising and technical assistance agency which helps finance and assist the educational, medical, economic, and social services of the Mozambican people." All schools and medical facilities, including those established and formerly operated by the churches, have been nationalized by the Marxist-Leninist Government of Mozambique.

The Africa Fund's executive secretary and paid staff head is George Houser. Officers and trustees, who meet rarely and with scarcely a quorum, include chairman: Frank C. Montero, executive vice-president, Tishman Realty and Construction Co., New York, N.Y.; vice-chairman: Edler G. Hawkins, Princeton Theological Seminary; treasurer: Andrew E. Norman, president, Chelsea House Publish-

ers; Issac Bivens, assistant general secretary for Africa of the Board of Global Ministries of the United Methodist Church; Jacob Clayman, director of the AFL–CIO Industrial Union Department; John L. S. Holloman, president, Health and Hospital Corp. of the city of New York; Sophia Yarnall Jacobs, former chairperson of the New York Urban League; William B. Landis, a partner in the law firm of Mudge, Rose, Guthrie, and Alexander; Jan S. F. van Hoogstraten, director of material resources of the Church World Service of the National Council of the Churches of Christ; and Peter Weiss of the Center for Constitutional Rights and the law firm Weiss, David, Fross & Lehrman.

The Africa Fund describes itself as an "organization helping Africans work against the injustices of colonial and white minority domination." Its goals are "Providing financial help for clinics and hospitals in liberated areas; providing assistance for schools and training institutes; providing legal assistance for those who have challenged minority rule and apartheid; [and] engaging in nonpartisan study, research and analysis of basic questions related to Africa and making the results available to the public."

In light of the "nonpartisan study, research and analysis" provision, it is noted that in 1975 the Africa Fund began preparation of "a thorough study of South Africa's military capacity and new developments."

The most recent figures for Africa Fund income and expenses (1975) list contributions from direct mail solicitation of only $15,100; literature sales of $2,881; interest income of $1,482; and from "Foundations and Private Sources" of $122,385. Reportedly the largest benefactors of the Africa Fund for many years has been the Samuel Rubin Foundation established by Peter Weiss' father-in-law, former Faberge magnate Sam Rubin. Officers of the foundation include Cora Weiss, Sam Rubin's daughter; her husband Peter Weiss; Reed Rubin, her brother named after writer and American Communist John Reed who is buried in the Kremlin wall; and Sam Rubin.

The Samuel Rubin Foundation has formed the principal financial base of the Institute for Policy Studies, of which Peter Weiss is the leading trustee, and for its Transnational Institute. A number of IPS staff have served on the ACOA executive committee.

The Africa Fund's 1975 expenses were listed as including: Mozambique Institute—$39,165; Guinea-Bissau—$10,000; refugee aid—$3,480; student assistance—$5,437; research staff—$25,941; travel—$7,431; literature—$3,928; personnel—$14,548; overhead expenses paid ACOA—$16,917; printing, postage and inserting—$8,990; fund raising—$6,000; and miscellaneous expenses of $6,576.

The Africa Fund's 1975 total income was $141,858. With total expenses of $148,413, there was an excess of expenses of $6,555. Cash assets on December 31, 1975 totaled some $27,000. The Africa Fund's 1974 income was $62,738; but expenses were $102,494 which left a 1974 deficit of $39,756. In 1975 most of ACOA's expenses for research and literature distribution were taken over by the Africa Fund. ACOA's 1975 budget was just under $100,000 with that adjustment in "research" costs.

The American Committee on Africa's Executive Board as of January 1977, included (* indicates members of the Steering Committee):

*President: Hon. William H. Booth, Judge, Supreme Court of the State of New York, Brooklyn, NY.

*Vice-President: Elizabeth Landis, consultant to the Office of the United Nations Commissioner for Namibia, NY.

*Vice-President, David Robinson, Professor of African History, Yale University, CT.

*Treasurer, Jay Jacobson, attorney, Saxon Industries, New York, N.Y.

*Secretary, Dorothy Hibbert, Principal, Community School 146, Bronx, N.Y.

Elombe Brath, Consultant to the Graphic Arts Department, WABC–TV, New York and producer of its black public affairs show, "Like It Is."

Marshall Brown, Chairman, Department of Health Education, Essex College, Newark, NJ; active in sports and civil rights.

*Robert Browne, a founding ACOA member now director of the Black Economic Research Center, NY.

Goler Teal Butcher, former chief counsel to the House Subcommittee on Africa, and Carter Campaign adviser, is now Deputy Assistant AID Administrator for Africa.

Elsie Carrington, Director, Community Participation Education Program, New York, NY.

*George Daniels, Director, Interpretation Services, Board of Global Ministries of the United Methodist Church, NY.

Michael Davis, attorney with the Center for Constitutional Rights and the firm of Rogers, Hoge & Hill; Southern Africa Collective (SAC).

Moe Foner, Executive secretary, District 1199 of the National Union of Hospital and Health Care Employees, long a Communist Party, U.S.A.-dominated union.

Collins Gonze, Assistant Director, Department of International Affairs, United Auto Workers (UAW), Washington, DC.

Lawrence Henderson, Regional Secretary for Latin America and Africa, Board for World Ministries of the United Church of Christ, New York, NY.

*Janet Hooper, Former editor of Southern Africa magazine and continuing member of the Southern Africa Collective.

Leonard Jeffries, Chairman, Department of Black and Puerto Rican Studies, City College, City University of New York.

William Johnson, President, Episcopal Churchmen for South Africa, NY; member of Southern Africa Collective.

David Lampel, Director of the News Department of black-oriented radio station WLIB in New York.

*Tilden LeMelle, Chairman, Department of Black and Puerto Rican Studies, Hunter College, CUNY.

Edgar "Ted" Lockwood, Director of the Washington Office on Africa (WOA); member of the Southern Africa Collective.

Oseye Mchawi, Organizer, Committee to Aid African Independence, Brooklyn, NY.

Gail Morlan, former president of the Southern Africa Committee and member of the magazine collective.

*Andrew Norman, President, Chelsea House Publishers, NY.; the Norman Fund, Inc.

Frederick A. O. Schwarz, Jr., Chief Counsel, Senate Select Committee on Intelligence.

Adelaide Schulkind, retired director of the League for Mutual Aid, New York, NY.

Herbert Shore, Consultant to the Smithsonian Institute and to the U.S. Commission of UNESCO; author of a biography of the founder of the FRELIMO, Eduardo Mondlane; co-author with Houser of an ACOA/Africa Fund booklet on FRELIMO in 1975.

Timothy Smith, director of the Interfaith Center on Corporate Responsibility which coordinates economic attacks on southern Africa.

Robert VanLierop, self-described Marxist lawyer who has made films extolling the FRELIMO; organizer of the Committee for a Free Mozambique and the Africa Information Service.

The American Committee on Africa has had continuing associations with overt members of U.S. revolutionary groups ranging from the Communist Party, USA (CPUSA), through militant Trotskyite and New Left sects. In the late 1960's, CPUSA member Blyden Jackson was perhaps ACOA's most active office staff member. Jackson's duties included organizing street demonstrations from the ACOA office against South African visiting dignitaries.

The executive associate to George Houser on the ACOA staff is Paul Irish, formerly Tim Smith's assistant at the Interfaith Center for Corporate Responsibility. In June 1975, Paul Irish was the ACOA representative at the FRELIMO's independence ceremonies in Maputo. In discussions with FRELIMO officials, Irish reviewed ACOA's aid programs and where the new Marxist-Leninist regime wanted the funds to go. It is noted that at a conference in New York State earlier this year, FRELIMO representatives stated that all aid programs would have to be directed by the FRELIMO regime, not by any private or religious agency.

Paul Irish is a member of a militant Trotskyite group, the International Socialists (IS), and spoke as an IS representative on The Liberation of southern Africa along with Tapson Mawere, the principal U.S. representative of the Maoist terrorist ZANU organization, in Boston last fall. The British affiliate of IS, the Socialist Workers Party, has been involved in violent street riots over racial issues in recent weeks.

ACOA works closely with, and recommends highly, the Southern Africa Committee (SAC), Room 707, 156 5th Avenue, New York, N.Y. 10010, formed in 1967 as a power structure research group concentrating on Africa. The Southern Africa Committee can be considered a parallel group to the North American Congress on Latin America (NACLA) and the Pacific Studies Center in economic and political research designed to benefit anti-imperialist political and armed struggle movements. The SAC continues to publish Southern Africa, a major outlet for statements, literature and position papers from the Soviet-backed terrorist movements and new Marxist-Leninist governments now controlling the former Portuguese territories. A 3-month trial subscription costs $1.

The SAC's attorneys, Peter Weiss and Michael I. Davis of the ACOA and Center for Constitutional Rights demanded the FBI files on the Southern Africa Committee under the Freedom of Information Act. When the file was denied on grounds that the FBI had begun an investigation of the SAC at the request of the Justice Department to find out whether the SAC was in violation of the Foreign Agents Registration Act. The investigation had begun in March 1975: in November 1975 the SAC filed suit demanding the FBI, and the Justice Department, release all files relating to the SAC.

The investigation was ended in December 1976, and subsequently all files, reports the Center for Constitutional Rights, have been handed over. The Criminal Division of the Justice Department remains "interested in receiving any additional information which * * * may indicate that the subject organization has an obligation to register * * *."

The Southern Africa Committee has made a great deal of use of an exerpt of an FBI document which states that "investigation of the SAC since 1971 has failed to uncover any act of violence or terror on the part of the SAC in the United States."

The SAC does not find it useful to its purposes to mention that its members have had ties to the Cuban Government and that a considerable number have traveled to Cuba on various pretexts. The SAC also does not mention that Cuban military and political advisers have been working with the Soviet-backed terrorist movements in Portuguese Africa—Guinea-Bissau, Angola, and Mozambique—since the mid-1960's in line with Castro's Tricontinental of Third World subversion. The SAC did not mention that the Cubans have the

responsibility of coordinating New Left support activities for the new revolutionary governments in Angola, Guinea-Bissau, and Mozambique as evidenced by the Havana Solidarity Conference in which personnel of the Cuban U.N. Mission selected the U.S. delegates and organized the meetings.

SAC has made much less use of another recent FBI report:

[The Southern Africa Committee] takes a pro-terrorist position in such countries as the Republic of South Africa, Rhodesia and South West Africa. * * * Collective members have made occasional trips to Africa to meet with terrorist activists. Committee organizers are also related to such groups as the American Committee on Africa * * * whose members are also reported to be in contact with so-called liberation movement workers.

* * * The SAC is comprised of approximately 40 members in the New York area who agitate in favor of black terrorists in Africa. * * * The Committee has supported terrorism in Africa for over ten years and now has a strong relationship to Guinea-Bissau, a member of the U.N. * * *. Money could be coming from this state, as well as Cape Verde, Mozambique and perhaps other black countries * * * who seem to value their propaganda contributions to the terrorist cause. * * * The Committee is one of a network of groups which provide much support, both propaganda and material, to the subversive forces * * * in and of Africa.

Members of the Southern Africa Collective of the SAC in 1977 include Barbara Barnes; Carole Benglesdorf; Wes Cohen; Paddy Colligan of the Workers World Party (WWP); Jennifer Davis, a South African, the director of research for the ACOA, and frequent supplier of testimony to Congress; Michael Davis; Charlie Ebel; Mimi Edmunds; Nancy Gear; Lynn Goodwin; Peggy Halsey; Janet Hooper; Tami Hultman; Paul Irish; Allen Isaacman; Bill Johnston; Marci Kerr; Richard Knight, a member of the ACOA staff; Reed Kramer; Richard Leonard; Carolyn Fleuhr-Lobban, and Richard Lobban of Connecticut who write letters to and articles for the Daily World; Edgar Lockwood; Bill and Ruth Minter; Antonio Neves; Dipankar Ray; Susan Rogers; Christine Root; Karen Rothmeyer; Mike Shuster; Janet Siskind; Par Smith Louise Stack; Jinni and John Stroman; Stephanie Urdang; Roberta Washington; Jim Weikart and Leiza Zadel.

The activities of the American Committee on Africa and its related organizations demonstrate the existing loopholes in U.S. laws which enable tax-exempt funds to be channeled to terrorist groups, which permit groups which are de facto serving as foreign agents to evade the registration requirements which clearly need tightening, and in the Freedom of Information Act which enables organizations working with international terrorist groups to demand, and receive, the Federal investigatory files on them.

Clearly Congress needs an Internal Security Committee which would be able to investigate the extent of the problem, hold the necessary hearings, and develop new legislation to cope with this threat.

SEVERE BLOW DEALT TO IMPERIAL COUNTY IF RECLAMATION REGULATIONS STAND

HON. CLAIR W. BURGENER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. BURGENER. Mr. Speaker, I would like to point out to the Members of the House the severe consequences which could result in western agriculture if proposed regulations issued August 25 by the Bureau of Reclamation are allowed to take effect. These regulations relate to the so-called 160-acre limitation.

The regulations, which mandate heretofore overlooked enforcement of a turn-of-the-century law long since outmoded have thrown the Imperial Valley in my congressional district into the first stages of agricultural and business panic. The potential effects could be devastating not only for many family farmers and family businessmen, but also for the Nation's consumers, as Imperial County provides the fifth largest county agricultural production value in this country.

Enforcement of the 1902 Reclamation Act, from which the Imperial Valley has been exempt during virtually the entire period of its important agricultural development, amounts to ex post facto policy which would set agricultural production back years.

I have written Secretary of Agriculture Bergland, who I understand was not even consulted prior to the issue of these regulations, asking him to undertake an immediate economic impact study of the effects of these regulations on Imperial County agriculture, and I urge interested colleagues to do the same.

Further, I have called on Interior Secretary Andrus to hold extensive public hearings in the Imperial Valley and other affected areas in order to determine first-hand the effects of these proposed regulations. The civil servants who put these regulations together with apparently little consultation should not be afforded the luxury of remaining anonymous at the other end of a post office box which will undoubtedly be flooded with individual reaction to the effects of these regulations should they take effect. They should go out on the firing line and see first-hand the already negative impacts just the promise this Federal mistake is having.

I would like my colleagues, all of whom are truly interested in American agriculture and the American consumer, who will ultimately bear the burden of these ill-advised policies, to join me in doing all we can to bring some sensibility to any final regulations which are implemented. This is just another instance of unwarranted Government intrusion which is sure to have disastrous effects on the Imperial Valley and other important western agricultural areas—as well as the Nation as a whole.

THE FACE OF EVIL IN CASTRO CUBA

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. RUDD. Mr. Speaker, overshadowed by the President's unpopular proposed new Panama Canal Treaty, which reports now indicate is opposed by anywhere up to three-quarters of all the American people, is his equally distressing initiative to reopen diplomatic relations with Castro Cuba.

I would like to recall some recent history, which can provide valuable instruction to all of us as we confront this foreign policy issue.

We liberated Cuba from the Spanish tyrant. Some cynical critics who are always able to find an ulterior motive in American actions have written that this was promoted by William Randolph Hearst, who wanted exciting copy to help sell his newspapers.

Nonetheless, Americans fought and died in Cuba. And when we dislodged the Spanish tyrant, we withdrew and provided continued assistance to a new independent nation we had created.

The United States extracted no commercial benefits. In fact, in trade and support we contributed more than we obtained. The Cuban Government was never as stable, successful, or benevolent as we had hoped it would be.

The Cuban people suffered under a succession of dictatorial Presidents who were elected, and dictators who came to power through coupe d'etat.

In March 1952, Fulgencio Batista, who had served an earlier term as President, seized power in Cuba through a coup d'etat. In 1954, he ran unopposed and was elected President.

Batista was anti-Communist and pro-American. Under his leadership, Cubans had the second highest per capita income of any Latin or South American country. But Batista was classified in the minds of American journalists and liberals as a rightwing dictator.

In any event, Batista promoted Havana as a tourist attraction. He strengthened the sugar industry. And he constructed needed public works.

On July 26, 1953, a young radical Communist, Fidel Castro, who had participated in the Bogota uprising in 1948, led an assault on the Moncada army post at Santiago.

Castro and about 150 followers held the mistaken belief that the soldiers would revolt and welcome them. They didn't. In that assault, a number of Cuban soldiers in the barracks infirmary were brutally murdered. But the Castro forces were driven off, and in October Castro and his brother were brought to trial. They were sentenced to 15 years in prison.

In May 1955, Batista declared a general amnesty for political prisoners. The Castro brothers fled to Mexico and immediately began enlisting an army to invade Cuba to wrest power from Batista.

In 1956, they made a landing with an

invasion force and were soundly defeated. Castro and his brother, Raul, managed to escape and fled to a hideaway in the mountains.

A year later, Herbert L. Matthews, a reporter from the New York Times, interviewed Castro in his mountain hideaway, and in three front-page articles pictured Castro as a peasant reformer—a white knight preparing to rescue the Cuban people from slavery.

Castro had money and weapons, provided by the Communists and by some disenchanted politicians.

In 1958, he seized power because the United States had adopted an anti-Batista policy, refused to sell arms to Cuba, discouraged other nations from selling arms, and publicly withdrew its support of the Batista regime.

There is no mistake in this. The U.S. State Department, headed by Christian Herter, William Wieland, and Roy Rubottom, were responsible for the success of Castro's coup.

Indeed, Senator John F. Kennedy described Castro in glowing terms, and compared him to Simon Bolivar.

The American press could see great virtue in a dictatorship of the left, and no menace in the Communist influence.

Despite the fact that Castro had been involved in the Bogota uprising, he was not publicly identified as a Communist. In fact, not until a year or so later, when Castro proclaimed his devotion to communism, were we told that Cuba was in the hands of the Communists.

We heard little of the public executions, the firing squads, El Paredon, the brutal treatment of political prisoners. But about 600,000 Cuban patriots who escaped that island nation longed to overthrow the Communist dictator Fidel Castro. And the U.S. Government, with the full backing of President Eisenhower, supported that effort.

Approximately 1,500 Cuban patriots were recruited and trained at secret bases in Guatemala by American Marine instructors. The United States provided arms and all other support, including a fleet of B–26 airplanes.

The military operation was planned to commence with an attack by 16 B–26's, to be launched against Castro's airfields and to catch the Communist aircraft on the ground. But when John F. Kennedy was elected President, Ike put the whole program on hold—believing that the new President should make the ultimate decision.

Kennedy approved the program. But a week or two before it was to be put into operation, Kennedy and his advisers changed the designated landing spot from a seaport serving the town of Trinidad, to Giron, a marshy area on the western coast.

Then Kennedy and his advisers decided that if 16 B–26's participated on the initial flight, it might appear to the world that the United States was supporting the effort. So they arbitrarily cut the flight from 16 to 8. Then Kennedy canceled the second-day assault, which was to have been made with 16 B–26's. On the third day, the landing party had no aerial cover at all.

Perhaps as a result of misinformation, or ineptitude, or blind prejudice, the State Department officials under the Eisenhower administration had permitted Castro to come to power. Now under Kennedy the United States betrayed the men we had enlisted to invade Cuba, and condemned them to capture, death, and imprisonment.

Immediately following that disastrous defeat, known in history as the Bay of Pigs, we participated in two deceptive hoked-up schemes to ransom the prisoners.

The first was tractors for Cuba—and that fell of dead weight. The second, masquerading as an American Red Cross operation, resulted in American industry contributing about $50 million to Castro in return for the release of about 1,000 remaining Cuban patriots.

In October 1962, President John F. Kennedy informed the Nation that Russia had installed offensive intercontinental ballistic missiles in Cuba. We went on military alert. Reserves were called up. And in brave words, Kennedy declared we would have onsite inspection and that Russia must remove the weapons.

As the press told the story, we had come to the brink of nuclear war. The press applauded when Kennedy backed down, accepted aerial reconnaissance for onsite inspections, guaranteed the continued existence of Castro's regime, and withdrew our missiles from Turkey and Italy.

Here is the truth of that situation. In 1954, President Eisenhower created a special committee to be concerned with the possibility of surprise attack against the United States by the Soviets.

This committee secretly developed the U–2 reconnaissance aircraft, and by 1956 we were flying over the Soviet Union on a regular basis. The U–2 was a remarkable defensive weapon. It had no landing gear to save weight. It had to be launched from a mother airplane. It could fly 4,000 miles at altitudes of 8 or 12 miles, and its cameras could photograph a swath of Russian territory 135 miles wide by 3,000 miles long.

The definition from those aerial photographs was so good that it was possible to read a newspaper headline photographed from 8 miles in the sky.

We knew from our aerial reconnaissance that Russia had very few ICBM's—no hardened bases. Despite Khrushchev's boast of missile superiority, we knew that our missiles, flying from hardened silos, outnumbered the Russians' 5 to 1.

When the U–2 was shot down in May 1960, Khrushchev abused Eisenhower, and we took it. But it wasn't the end of the spy program. Within 3 months, we had launched the SAMOS satellite to make the same photographs of Soviet military capabilities.

In 1962, President Kennedy knew beyond any question of a doubt that the Soviets had only a very few ICBM's, that they were exposed, that we could destroy them, and that they were really no threat to us.

And yet Kennedy backed down. And for all we know, there are still Soviet missiles in Cuban caves. Our just-deployed defensive weapons in Turkey and Italy, for which the taxpayers paid millions of dollars, were dismantled and brought home.

I review all these facts to stress that, even though we had the strength, our leaders lacked the will.

Cuba is the center of Communist intrigue in Latin and South America. From this secure base, Communist operators have fanned out into all of the Southern Hemisphere countries, and have met with success.

When we hear the issue of normalization of relations with Cuba debated on television and in the press and I hope it will be debated, we should keep in mind this brief history.

Castro needs the United States. Anything we do to strengthen his regime will strengthen the center of communism in the Western Hemisphere. And make no mistake about it, communism is our deadly enemy.

Mr. Speaker, great nations survive when their policies are based squarely on national self-interest. What would we possibly gain by normalizing relations with Castro's Cuba?

Those advocating this monstrous step will tell us that we would benefit from world opinion. They say that those nations envious of our power and strength would applaud such a benevolent gesture. But world opinion did not stop the forces of evil in World War II. It was American power that preserved freedom in this world. And world opinion won't bring peace to the Middle East or to sub-Saharan Africa or to Korea.

Normalizing relations with Cuba under Communist dictator Fidel Castro will only serve to strengthen the hand of his Communist regime, which has the longest standing worst record for violating human rights in this hemisphere.

We are not dealing with abstract concepts of human rights when we talk about Castro Cuba. We are talking about savage torture, personal degradation, and inhumane sentences for any Cuban who politically disagrees with or opposes Castro.

The sheer number of political prisoners in Cuba should be enough to give President Carter sincere second thoughts about his current initiatives.

Estimates vary widely, but 60,000 political prisoners is an accepted figure. Even Castro himself has admitted indirectly to 10,000—which is the equivalent of about a quarter million political prisoners in a country the size of our own.

Our Government should admit the face of evil in Castro Cuba, look at it squarely, and denounce it in every possible way. We should certainly not embrace this totalitarian Communist regime and give it added strength.

AWACS TO IRAN

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. BOB WILSON. Mr. Speaker, with

regard to the current controversy surrounding the sale of seven airborne warning and control systems—AWACS—to the Government of Iran, I believe such a transfer would be in the best interests of both our countries.

Iran presently has no reliable air defense system to protect itself against attack. Because of the country's rough terrain, a ground radar system would cost billions of dollars, not to mention the construction of numerous radar sites necessary to bring Iran's defense even close to what the AWACS can provide. In this light, there is little doubt that the use of AWACS by Iran is the most cost-effective and militarily effective solution to their air defense needs—and there seems little doubt about our need for a strong, friendly Iran. As Assistant Secretary of State Alfred Atherton said late in July, "denial of the sale would raise serious doubts in Iranian minds about the seriousness of our concern for Iran's security and about the long-standing United States-Iranian relationship." I could not agree more.

I also believe that the alarm over the possibility of the compromise of the system's highly classified and sophisticated electronics equipment is out of proportion to the realities of the situation, even taking into consideration the fact that we could remove some of the more sensitive items prior to a sale.

Mr. Speaker, given the factors I have mentioned, together with the conditions under which the transfer of the AWACS would take place, I would hope that we would see that a transfer of the AWACS to Iran would be mutually beneficial and would remove any barriers from its consummation.

TAX AND LOAN ACCOUNT LEGISLATION

HON. MARK W. HANNAFORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. HANNAFORD. Mr. Speaker, on April 25 the House of Representatives overwhelmingly passed H.R. 5675, a bill to authorize the Secretary of the Treasury to invest public moneys, and for other purposes. Basically, this bill permits Treasury to earn interest on its tax and loan account funds deposited in commercial banks and in other depositary institutions.

As a 1974 Treasury Department study revealed, the free use of Federal tax and loan account funds reduced potential earnings of the Federal Government and overcompensated financial institutions for services rendered in connection with these accounts. Specifically, the 1974 Treasury report claimed that commercial banks were able to generate earnings which exceeded the expenses of handling Federal T.T. & L. accounts by $170 million.

While Treasury has recently adopted stopgap measures to reduce the amount of T.T. & L. funds in commercial banks by transferring funds to Federal Reserve banks, these fluctuations complicate the Federal Reserve System's conduct of monetary policy, as evidenced in April.

Mr. Speaker, with the favorable reporting of H.R. 5675 from the Senate Banking Committee in July, I am anxious of the bill's passage by the full Senate and remind my colleagues that the enactment of this legislation will promote efficient cash management by the Federal Government, enabling the U.S. Treasury to earn $50–$100 million of additional revenues annually. Thus, the Government will be able to make effective use of tax dollars.

ALASKAN NATURAL GAS PIPELINE

HON. ELWOOD HILLIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. HILLIS. Mr. Speaker, for a number of years, the Congress, the energy industry, and numerous Federal agencies have debated which of many possible systems would be best to deliver Alaskan natural gas to the contiguous States. During the 94th Congress, this debate heated as the Alaskan oil pipeline drew nearer to completion. The debate became a political issue within the Congress with the introduction of several bills authorizing the construction of various pipelines and methods of delivery. For a while, it appeared that regional interest would be the determining factor instead of the merits of the individual proposals.

Fortunately, Public Law 94–586, the Alaska Natural Gas Transportation Act of 1976, was enacted as an alternative to the authorization bills supporting the various proposals. This measure established a process whereby the selection of a transportation system and route would be based on the best interest of the entire United States. As a result of the process established by Public Law 94–586, President Carter recommended the construction of the Alcan Pipeline Co.'s proposal on September 8, 1977.

I commend the President for his decision. The Alcan proposal was the most reasonable option available to the President. The importance of the President's decision cannot be underestimated due to its economic and social impact on the Western and Midwestern States. There is no question that the President made the right choice in recommending the Alcan proposal over the El Paso proposal.

Under the provisions of Public Law 94–586, the Congress now has 60 working days to accept or reject the Alcan proposal. Although I am sure there will be some efforts made to reject the President's recommendations in hopes of gaining approval of the El Paso proposal, such a rejection could only have the most severe consequences to this Nation's energy needs. Can anyone forget the hardships of last winter caused by low supplies of natural gas? I can assure you, Mr. Speaker, that my constituents of central Indiana have not forgotten.

By all accounts, the Prudhoe Bay natural gas fields contain the largest known reserves in North America—at least 20 trillion cubic feet of proven productible reserves. While this gas is not a panacea to our gas shortages in the United States, it will substantially lessen the demand being placed on our dwindling natural gas supplies.

I truly hope that this issue can be resolved as soon as possible in order that preliminary efforts can be started to construct the pipeline. Construction of the 2,700-mile pipeline will cost nearly $7 billion. Any delay caused by the Congress will only result in increased construction cost. Therefore, I urge that the Congress accept the Alcan proposal without any unnecessary delays.

RABBI DR. ANDREW J. ROBBINS

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. WOLFF. Mr. Speaker, I would like to bring to the attention of my colleagues the achievements of Rabbi Dr. Andrew J. Robbins who has just retired as the spiritual leader of Temple Emanuel in New Hyde Park. He is to be honored this evening at a special service and reception at his temple.

Prior to entering the rabbinate, Rabbi Robbins had distinguished himself as an educator and historian. A graduate of the University of London, where he also obtained his Ph. D., Rabbi Robbins served as an instructor to the office of strategic services in London during World War II. Following his immigration to the United States he received a master of Hebrew letters degree from Hebrew Union College in 1953, and was ordained by that school.

For 27 years Rabbi Robbins has guided Temple Emanuel's congregation with both compassion and foresight. He initiated dialog services that brought the Rabbi and the congregation together for informal discussions concerning Judaism and the community at large. As a community leader Rabbi Robbins was instrumental in promoting interfaith activities, and he himself has lectured and preached in many churches.

Rabbi Robbins has also been actively involved with the Long Island Jewish community as cofounder of the Long Island Association of Reform Rabbis, of which he was the first president.

Although Rabbi Robbins will be sorely missed in his position as the leader of Temple Emanuel's congregation, he will continue to serve both it and the community as Rabbi Emeritus. Through his knowledge and guidance he will continue his everlasting contributions to Judaism.

It is my honor to pay tribute to such a distinguished constituent, and I hope that in retirement Rabbi Robbins will continue his life in the comfort and happiness that he provided for so many who looked to him for spiritual leadership.

OHIO'S FIFTH DISTRICT POLL

HON. DELBERT L. LATTA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. LATTA. Mr. Speaker, the results of my 1977 questionnaire indicate that the American people have broad understanding and strong opinions on a wide range of national and international issues. For the benefit of my colleagues in the House, as well as Members of the U.S. Senate and administration, I am submitting for the RECORD the text of my annual district poll, with the responses registered by thousands of my constituents, as follows:

QUESTIONNAIRE

[In percent]

1. Do you approve of the following Carter energy conservation recommendations:

(a) Stand-by gasoline taxing authority of 5 cents per gallon per year for the next ten years? Yes, 16; No, 84.

(b) Standby gasoline rationing authority? Yes, 40; No, 60.

(c) Graduated tax on new automobiles unable to meet certain federally established mileage standards and federal payments for purchasing small ones? Yes, 39; No, 61.

(d) Tax credits for insulating homes after a given date? Yes, 59; No. 41.

(e) A wellhead tax on American regulated crude oil which could ultimately add 7 cents per gallon to gasoline prices? Yes, 13; No, 87.

2. Do you believe government controls have hampered new exploration of oil and natural gas? Yes, 68; No, 32.

3. President Carter has recommended that the money necessary for maintaining the Social Security Trust Fund no longer come from employer-employee contributions exclusively but that a portion of its funds come from general tax revenues. Do you favor the proposal? Yes, 51; No, 49.

4. Should pending legislation to permit people to both "register for, and vote in, a federal election at an appropriate polling place" on the day of an election pass the Congress? Yes, 35; no, 65.

5. (a) Should we resume diplomatic relations with North Vietnam and Cuba? Yes, 41; no, 59.

(b) If diplomatic relations resume, should they be given foreign aid? Yes, 3; no, 97.

6. Do you favor turning the Panama Canal over to the Panamanians? Yes, 10; No, 90.

7. Do you believe that Big Labor wields too much power in the American political system? Yes, 88; no, 12.

8. Should federal employees be given the right to strike and to bargain collectively? Yes, 19; no, 81.

9. Do you favor efforts to unionize the Armed Forces? Yes, 4; no, 96.

10. If the United States unilaterally cut back its strategic military defenses, do you believe the Soviet Union would do the same? Yes, 8; no, 92.

11. Do you favor terminating the All-volunteer Army and reinstating the Draft? Yes, 42; no, 58.

12. Did you approve of the Presidential pardon extended Vietnam draft-dodgers? Yes, 25; no, 75.

(a) Do you approve of legislation to give them GI benefits? Yes, 5; no, 95.

(b) Do you favor the announced plan to upgrade their discharges? Yes, 11; no, 89.

13. Do you favor de-criminalizing the use of marijuana? Yes, 27; no, 73.

14. Do you believe the removal of U.S. troops from South Korea would be a signal for a Communist take-over? Yes, 72; no, 28.

MINIMUM WAGE HIKE CONCERNS

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. ABDNOR. Mr. Speaker, on July 26, I presented the following testimony before the House Rules Committee concerning proposals to raise and index the Federal minimum wage.

STATEMENT OF HON. JAMES ABDNOR RE H.R. 3744.

I would like to take this opportunity to express my strong opposition to H.R. 3744, the minimum wage bill. I strongly believe that any increase in the minimum wage would only serve to put more people out of work and fuel our high inflation. Those groups that would suffer the most from such a proposal are those that are already suffering from high unemployment, such as our young people, the handicapped, and our minority groups.

I am especially opposed to any kind of minimum wage indexing mechanism, which has been proposed in H.R. 3744. Such an indexing provision is a perfect example of built-in inflation and would be a serious blow to our Nation's economy. At a time when inflation is dangerously high, and threatening to go even higher, it is incredible that we are even considering such a proposal. If the minimum wage was tied to an index, it is very likely that we would never be able to get a handle on our inflation problem.

It is paradoxical that those groups which are arguing for a higher minimum wage are the first to complain when these proposals increase business costs and put more people out of work. And as a solution, Congress is expected to respond to this forced unemployment by providing public works job programs.

It has been clearly shown by a number of studies that increased inflation and higher unemployment can be directly attributed to minimum wage increases. It has to be remembered that such an increase would affect not only those individuals earning less than the new level but also those who are presently earning more. In order to maintain wage differentials, all wages will rise at all levels. Because of these wage relationships, a self-perpetuating indexing mechanism will guarantee annual inflation.

An indexing of the minimum wage will also guarantee annual unemployment. Whether the labor bosses in this country will admit it or not, our small businesses cannot afford to absorb a wage increase without either raising prices or reducing the number of employees. Usually a business is faced with doing both. To give you a good example of the effects of a minimum wage increase, let me quote from a letter that I recently received from a small businessman in South Dakota:

"We have been in the retail business since 1922 and have seen good years and bad years. In 1975, due to both inflation and the drought, we suffered a small loss, our first loss since the 1930's. And in 1976, our net profit was less than 1% of sales; so we do not have any leeway or 'fat' in our operation to absorb any wage increases and would have to raise our prices and hope that the customers would pay these increases and also reduce our number of employees and store hours. The history of previous minimum wage increases has proven this to be the case. In April 1974, we had 17 employees; today we have 13 employees and they are working shorter hours per week."

I would like to emphasize the fact that the above example is not an isolated case, but is representative of many of our businesses in South Dokota and the Midwest. One of our hospital directors has indicated that H.R. 3744 would increase the hospital's annual payroll by at least $300,000. In order to accommodate the increase, they would have to lay off 20 to 30 employees, and their patient care programs would ultimately suffer. I have received a great many similar responses from business, both small and large, in South Dokota, and virtually all of the input that I have received from my constituency has been in strong opposition to an increase in the minimum wage as proposed in H.R. 3744.

One popular justification of increases in the minimum wage is that the increase will be absorbed by wealthy owners or through a lower profit margin. Numerous studies of the impact of minimum wage legislation indicate that what actually occurs is that the workers bear a good part of the cost of increases in the minimum wage through manhour reductions and other types of adjustments, including price decreases for material suppliers, reduced quality of customer services and price increases for consumers. Also, there is evidence to indicate that the more workers affected by the increase, the more likely it is that they will suffer some direct hardship as a result of it. The more substantial the payroll costs of the increase in the minimum wage, the more adjustments are made in worker assignments and hours.

Perhaps the worst impact of the minimum wage affects the small businessman. It is a harsh reality that minimum wage rates do force some firms to close and others to shift to new industries. There are some who would argue that the decrease in the number of small firms in these industries is not really bad. They would argue that the firms were probably marginally productive and that their elimination makes the industry more efficient as a whole because larger plants can take advantage of economies of scale. This however, is not borne out by the evidence. Size is no guarantee of efficiency, and the undermining of small firms by the minimum wage may in fact be contributing to a decline in productivity rather than the opposite.

I would like to make special mention of the impact of a minimum wage increase on teenagers, the handicapped, and part-time workers. Businesses have historically trained young people by providing them job opportunities at pay levels usually commensurate with the minimum wage. If the minimum wage becomes too high, businesses would be much better off to hire full-time, experienced personnel. There are experienced individuals who would be ready and willing to work at a guaranteed high minimum wage, and employers would understandably be justified in turning to them over young, inexperienced workers. The unemployment rate for our youth in this country is disgracefully high, and it would be a crime to take away those opportunities, however limited, that are presently available. There is no logical reason that this bill shouldn't contain a youth differential so that our businessmen can truly provide employment opportunities for our young people.

Our businesses have also provided employment for our handicaped citizens by giving them opportunities to develop their job skills. Again, if the minimum wage becomes too high, these individuals will be priced out of the market and we cannot realistically expect our small businesses to pay unreasonably high wages to provide these train-

ing opportunities because they simply would not be able to afford it.

I am also very concerned about the reduction of the tip credit. Although I am pleased that we aren't looking at a proposal to eliminate this credit. I am nevertheless strongly opposed to the reductions that have been proposed in H R. 3744. These reductions would drastically increase labor costs for tipped employees and would needlessly force many such employees from their jobs.

In conclusion, I would like to again urge my colleagues to defeat H.R. 3744 and any other unreasonable minimum wage proposal that might come before us in the House. An increase in the minimum wage would put a severe strain on our struggling economy. It would fuel inflation and increase unemployment, and it would be a slap in the face to those disadvantaged groups which we have so often sought to help. The weight of evidence argues against an increase in the minimum wage, and it especially argues against an indexing scheme such as that proposed in H.R. 3744.

We have to look beyond the surface of this legislation and recognize the adverse consequences that would result from its passage.

Thank you very much.

A LEGEND IN HIS OWN TIME

HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. BURKE of Flordia. Mr. Speaker, yesterday was the 77th birthday of our friend and colleague, CLAUDE DENSON PEPPER. I cannot let the occasion go by without a few personal words about the inspiration of this man to all mankind.

Everyone who seeks public office or to lead people anywhere hopes that they will be able to do something to improve mankind and win a niche in the history books. CLAUDE PEPPER has won more than a niche in the annals of U.S. history—he could be a whole chapter by himself. Few Americans, if any, have ever served under as many Presidents as Senator PEPPER. He served under Presidents Roosevelt, Truman, Eisenhower, Kennedy, Johnson, Nixon, Ford, and Carter and it looks like he may serve under two or three more. CLAUDE is a very unique person. It can truly be said that he is not getting older, he is getting better. Although what he has accomplished in his life would dwarf the achievements of almost anyone in the world, he still continues to explore and conquer new territory. In addition to being an overachiever, CLAUDE is also one of the most beloved Americans ever. As a Republican, I have frequently disagreed with him on issues. As a fellow Floridian, we have rarely seen eye to eye on policy matters but my affection for CLAUDE PEPPER comes from respect, admiration, and confidence that he has the best interests of our Nation at heart. Perhaps there is no other figure in our time who has exhibited consistently the dignity, grace, and charm that CLAUDE PEPPER has. He is everyone's friend, the mighty and the small, and we all love him. If he were to write a book about his life it would probably become an instant bestseller because he has had a front-row seat for all the major events in this century. The following is a news report which appeared in the New York Times today entitled "At 77, Florida's PEPPER, a New Deal Veteran, Is Still Going Like 38." I would like to share this with my colleagues so that those who do not know him well can better appreciate the stature of this remarkable and unique patriot. I hope it will inspire young people beginning in politics to suffer graciously the slings and arrows that are bound to come their way, to learn that others before them suffered the same way. I am sure that all senior citizens who know Mr. PEPPER are inspired by his living example of youthfulness and purpose. In short, I admire CLAUDE PEPPER—he is a fine example of the best qualities of man of of our Nation.

AT 77, FLORIDA'S PEPPER, A NEW DEAL VETERAN, IS STILL GOING LIKE '38

(By Marjorie Hunter)

WASHINGTON, Sept. 8.—Representative Claude Denson Pepper suspects that if he were cast in a role on a television show, he would be depicted as a doddering, toothless old man. Claude Pepper was anything but doddering and toothless today as he celebrated his 77th birthday by conducting a House committee hearing into age stereotyping on television.

The Florida Democrat, one of the last veterans of the New Deal still serving in Congress, arose at 7:30 A.M., arrived at his office at 9, rushed off to a meeting of Miami labor leaders and contractors and then, as the clock struck 10, walked briskly into a crowded hearing room where he gently chided television executives.

"Today," he announced, "I turned 77 years old and I must confess that I do not feel demonstrably different than I did at 60.

"Yet, I expect to weather an onslaught of well-intentioned persons who will tell me that I do not look my age. These comments raise the question: How, precisely, does one expect a 77-year-old to look?

"I suspect that a 77-year-old is expected to appear toothless and doddering, a caricature of his or her younger self."

His hair is grayer now, and there is just the suggestion of a stoop to his shoulders, but Claude Pepper at 77 looks little different than he did in 1938 when he appeared on a Time magazine cover as "the Florida fighting cock [who] will be a White House weather vane."

Those, perhaps, were his days of greatest glory. He had been elected to the Senate in 1936 and promptly allied himself with his hero, Franklin D. Roosevelt.

As one of President Roosevelt's staunchest supporters he helped pioneer Lend-Lease legislation. He cosponsored repeal of the poll tax. He promoted compulsory military service and was hanged in effigy on the Capitol lawn by outraged mothers.

By the late 1940's, it appeared that he would make the Senate his full-time career. In 1950, he was defeated by a one-time protégé, George H. Smathers, a man he had helped to win a House seat a few years earlier.

It was one of the most bitter campaigns in Florida history, with opponents labeling Claude Pepper as a "nigger lover," a "spellbinding pinko" and a man who was "soft on Communism."

It was in that campaign that Mr. Smathers, speaking to a largely uneducated gathering in northern Florida, said:

"Are you aware that Claude Pepper is known all over Washington as a shameless extrovert? Not only that, but this man is reliably reported to practice nepotism with his sister-in-law, and he has a sister who was once a thespian in wicked New York. Worst of all, it is an established fact that Mr. Pepper, before his marriage, practiced celibacy."

Eight years later, Mr. Pepper tried to make a Senate comeback, but lost to Spessard L. Holland. Finally, in 1962, he won a seat in the House.

The "Senator", as many colleagues still call him, sets almost as fast a pace for himself today as he did nearly 40 years ago. He seldom misses a floor vote in the House. He is a member of the House Rules Committee, which decides which bills reach the floor, and he is a chairman of the Select Committee on Aging.

He usually works 12 hours a day, he still plays golf on weekends and he and his wife have an active social life.

Young staff members sometimes find themselves panting to keep up with him.

"I go like a house afire, I guess," he says. "I don't know why they don't quit."

Convinced that older Americans are being wrongly depicted on television, in books, in movies, in newspapers, Representative Pepper is determined to focus attention on what he views as age stereotyping.

LABOR LAW REFORM ACT

HON. MARTY RUSSO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. RUSSO. Mr. Speaker, the Chicago Tribune is not known for its automatic endorsement of legislation supported by America's trade unions. With this in mind, I believe my colleagues may find interesting this recent Tribune editorial, which deals with H.R. 8410, the Labor Law Reform Act of 1977.

IN FAIRNESS TO LABOR

As powerful as organized labor has become, it still has some problems when, in striving for collective bargaining, it bumps heads with employers. The National Labor Relations Board, for example, has no time limit to force an election; this enables some employers to stall for up to a year with legal challenges to the validity of employe authorization cards.

The White House is expected to support compromise legislation to be introduced by Sen. Harrison Williams and Rep. Frank Thompson, both pro-labor Democrats from New Jersey. One provision would require such union-representation elections in small, uncontested cases within 15 days. For large, contested cases, the NLRB would have to act within 75 days. That would seem to give either side reasonable time to exercise its rights adequately. But because legitimate disputes in this area are complex a limit of anything less than 2½ months would be unfair.

Another organizing problem for labor is that employers can fire key workers for engaging in union activities and thus intimidate other employes. Although such firings are illegal, the severest penalty now is likely to be the payment of back wages. Labor originally wished to triple the penalty. But that would probably produce a flurry of triple-pay suits, regardless of merit.

It would also unduly inhibit employers from firing incompetent workers who might claim that they were being fired for union activism. Even the bill's compromise proposal to double back wages would be inhibiting, but to a lesser degree, while striking what seems to us as a fair balance between the rights of employers and employes.

The bill's proposal to help speed up cases by increasing NLRB membership to seven

from its current five should benefit both sides, which is more than we can say for the notion of having "routine" appeals from NLRB hearing-officers' ruling decided by only two board members. Appellants may not consider their cases any more routine than persons who appeal civil or criminal disputes to the Supreme Court, where having two justices out of nine decide would be more like legal lottery than constitutional review.

Automatic enforcement of NLRB decisions unless an appeal is filed within 30 days of an order, as proposed by the bill, also seems to be a way to expedite decisions without unduly restricting the ability of either side to respond.

More dangerous is the proposal to deny U.S. government contracts to employers who "wilfully" violate labor laws.

This would do more than redressing a possibly legitimate grievance. It would tend to discourage employers from lifting a finger against intolerable employe actions for fear of losing the case before the NLRB and the courts and therefore of losing federal contracts upon which the livelihood of employers and workers alike may depend. That would represent the kind of unhealthy shift in balance between employers and employes that has got both sides into trouble in the sagging economies of other industrial nations.

We support certain of these proposed changes because they strike us as fair. If there has been an agreement whereby the Carter administration will support the Williams-Thompson proposals in exchange for labor's abandonment of its more obnoxious proposals such as prohibiting state right-to-work laws, good enough; many of these proposals remain what they always have been—monopolistic special interest schemes that penalize the average worker as well as the consumer.

SYMBOL OF EXCELLENCE

HON. RAYMOND F. LEDERER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. LEDERER. Mr. Speaker, I would like to call the attention of my colleagues in the House to a special accomplishment earned by a business in my congressional district.

The employees and management of the Nannette Manufacturing Co. have received the Sears "Symbol of Excellence" award for superior quality of merchandise produced last year, dependability of supply, and initiative in developing new and improved products. The award is very special indeed. Less than one-half of the product sources in the Sears family of over 12,000 receive such recognition. In addition, this is the 6th year that this company has received this award.

It is with a great deal of personal pride that I bring this to the attention of Members of this astute body. In an era when quality and excellence has been declining in the marketplace, it is refreshing to see how this business continues to keep the high standards required by both their employees and management. Superior product quality, high productivity, and dependable service are the trade marks of a fine business enterprise.

Mr. Speaker, I want to extend congratulations to all of the employees and management personnel at Nannette Manufacturing Co. and bring this great accomplishment to the attention of the Members of this body.

TAX REFORM

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for August 17, 1977, into the CONGRESSIONAL RECORD:

TAX REFORM

Why can't we have a simpler tax system? Why must our tax forms be so confusing that only one in four taxpayers can complete them without help? Why can't we enact tax laws that would put people with the same income on an equal footing so that each person would pay his fair share?

Most of the complications and inequities which trouble taxpayers are directly related to the manner in which our tax system is used for purposes other than raising revenue. By not collecting all the taxes the government might on certain types of activities, our tax laws promote various social and economic goals. Among other things, home ownership and investment in private enterprise are encouraged, state and local governments are subsidized, the cost of moving from one job to another is underwritten and schools, churches and charities are supported.

The direct cost of these "tax preferences" is staggering. The federal government will lose nearly $127 billion in revenue for the fiscal year beginning October 1 because of them. Equally alarming is the fact that lost revenue could amount to $167 billion in fiscal year 1982, primarily because inflation adds to the value of tax preferences and Congress continues to give more tax breaks to one special interest group or another. These figures, however, are hardly surprising when we consider that more than half of all income presently escapes taxation.

The cost in terms of complexity and inequity of these tax preferences is equally staggering. The host of exemptions, exclusions and deductions not only make our tax laws complicated and confusing, but have spawned a billion dollar industry to prepare tax returns.

Any serious efforts to reform or to simplify the tax laws must address the issue of tax preferences. To the extent that they are eliminated, the tax base is increased, thus making it possible to lower tax rates while maintaining revenues. However, should the aim of the tax laws just be to raise the funds that Congress deems necessary to run the government? How far should we go in eliminating tax preferences in the interest of simplicity, fairness and lower taxes? Would it be politically feasible to get rid of many of the tax preferences that Americans have come to expect?

One increasingly popular proposal in Congress would make tax preferences subject to periodic, mandatory review. Under such a "sunset" proposal, tax preferences would be automatically terminated after a certain number of years unless Congress decided that they should be continued. Undoubtedly sunset laws would help to slow the rapid proliferaiton of preferences. Opponents argue, however, that they would cause too much uncertainty for businessmen and individual taxpayers and thus hurt the economy.

President Carter has promised a major overhaul of our tax laws to make them simpler, fairer and more encouraging to economic growth. Although his proposals are still in the planning stage, his comprehensive tax package is expected next month. The options he is considering have been narrowed. They include:

An across-the-board cut in individual income-tax rates;

A tightening of limits on deductions for home mortgage interest;

Stronger restrictions on health care and casualty-loss deductions;

Repeal of the deduction for state and local sales taxes;

A curb on the use of business expense accounts;

Repeal of the provision allowing capital gains to be taxed at half the ordinary rate; and

Incentives for business investment (perhaps through lower corporate tax rates, increased investment tax credits, or an end to double taxation of corporate dividends).

President Carter's tax package will no doubt spark considerable debate. A recent survey reveals that a full 64% of the general public believes that our tax system is unfair. Only one in four, however, demands that tax revision be given top priority by federal lawmakers—an indication, perhaps, of a softness of popular support for substantive tax reform. In this context, it remains to be seen whether the President's proposals will galvanize public support or fall prey to parochial interests.

Tax reform has always been popular. No one likes to pay taxes, and promises of reform and simplification of the tax laws have great appeal—at least until specific proposals are put forward. Everybody wants to have reform and simplification as long as someone else has to give up his benefits. Meaningful tax reform, however, must involve all of us. Although the rich benefit disproportionately from tax preferences, the largest and most costly tax preferences are those enjoyed by nearly everyone.

EXPLANATION FOR ABSENCE FROM TWO VOTES SEPTEMBER 8, 1977

HON. ROBERT W. EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. EDGAR. Mr. Speaker, yesterday I had to leave the floor before the close of business to keep a 5:30 appointment with Deputy Secretary of Defense John Duncan. I was meeting with Secretary Duncan to get his explanation of why Boeing Vertol, a helicopter manufacturer in my district, has lost a large contract for the Navy LAMPS helicopter to another bidder. This loss has dealt a devastating blow to the economy of my congressional district.

After I left the floor, two recorded votes occurred prior to adjournment. The first was on Mr. Jacobs' amendment to the second budget resolution to delete all funds for the Republic of Korea unless they extradite Tongsun Park to this country. Had I been here, I would have voted "yea" on Mr. Jacobs' amendment. The second vote I missed was on the final passage of the second budget resolution

for fiscal year 1978. Had I been present, I would have voted "yea" on the resolution, House Concurrent Resolution 341.

MONEY CAUSES CANCER

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. McDONALD. Mr. Speaker, recently two reputable scientists confirmed what many probably have believed for a long time. Too much of any substance put in the human body under certain conditions will cause cancer. Using dimes inserted in the stomachs of rats, these two scientists were able to induce cancer in a great number of rats. Therefore, should we ban money? Probably yes the FDA would say. We have really reached the point of the ridiculous! The very interesting commentary on this matter from a Richmond Times-Dispatch editorial of August 5, 1977, follows for the edification of my colleagues who have joined or are thinking of joining on legislation to modify the Delaney amendment, such as H.R. 5508:

MONEY CAUSES CANCER?

Two scientists at the Denver General Hospital inserted sterilized dimes into the abdominal walls of 35 rats, and indications are that more than half the rats will get cancer. Federal health and safety officials should immediately ban all coins from circulation, declare the scientists.

"Indeed," write Dr. George E. Moore and Dr. (Ph. D.) William N. Palmer in a letter in the current issue of *JAMA*, the journal of the American Medical Association, "there is an excellent probability that folded paper money, government paychecks, bills and credit cards will provoke sarcomas [malignant tumors of the connective tissues] and they should be banned immediately."

The purpose of the experiment, according to Dr. Palmer, with whom we talked yesterday, was to demonstrate the asininity of the federal law which requires the banning of any food, food additive or food container that is found to cause cancers in rats.

The dimes were inserted into the 35 rats on March 28, 1976, and in only 14 months, nine rats had sarcomas and nine had abdominal masses. The experimenters estimate that malignancies will develop in more than half of the 35 rats.

Not being scientists, we are unable to assess the significance of the rat-dime experiment, but Dr. Palmer points out that his colleague, Dr. Moore, can be considered an authority on cancer, since he was for 17 years director of the Rosewell Park Memorial Hospital, a cancer research institution, in Buffalo, N.Y.

So it is of more than passing interest when Dr. Moore joins Dr. Palmer in charging that in proposing to ban saccharin, "the decision-makers in the Food and Drug Administration have done it again: protected the rat, reduced the credibility of cancer scientists, and kept their string of inane pronouncements on cancer dangers intact."

Food and Drug Administration officials may be able to refute the argument made by Drs. Moore and Palmer. Even though people don't make a habit of swallowing dimes, the view expressed by these researchers further emphasizes the importance of Congress' taking a close look not only at the FDA's specific action on saccharin, but also at the law which requires the banning of any food-related item that is found to cause cancer in humans or animals.

S. SHEPHERD TATE

HON. HAROLD E. FORD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. FORD of Tennessee. Mr. Speaker, I rise today to call the attention of my distinguished colleagues in the House of Representatives to an outstanding constituent of the Eighth Congressional District of Tennessee, Mr. S. Shepherd Tate. Mr. Tate, a leading member of the Memphis bar, was elected president-elect of the American Bar Association at its recent convention in Chicago. He is only the third Memphian to be so honored.

I am pleased to have been consulted by Mr. Tate on several issues since I have been in Congress, and I particularly look forward to his continued input into the legislative process in his new position of leadership. At this point I would like to share with the Members of the House an article from the Memphis Press-Scimitar about Mr. Tate:

A MAN WHO GETS THINGS DONE

(By Charles Thornton)

S. Shepherd Tate, the third Memphian since the 1930s to head the prestigious American Bar Association, is considered by his associates to be a quiet man who learned to keep his mouth shut as an intelligence officer during World War II.

Tate, 59, associated with the Memphis law firm of Martin Tate Morrow & Marston, follows the footsteps of Memphians Walter Armstrong Sr. and Edward Kuhn as presidents of the American Bar Association.

"He has a distinguished war record," said John Martin Jr., one of Tate's law partners.

"During World War II, he was a Navy intelligence officer and he won this enormous citation from the Chinese Nationalist government, but I don't know what it was for because it's written in Chinese," Martin said.

Exactly what Tate did to earn the citation is still pretty much a secret.

"Those intelligence boys were taught to keep their mouths shut and about all I know about it is that he served in the field," Martin said.

Fellow attorneys see Tate's elevation to president-elect of the ABA as an honor for the Memphis legal profession and the city.

"We are lucky to have a man like Shep," said one attorney. "He is absolutely conscientious. When he served as president of the Memphis and Shelby County Bar Association, he made sure every detail was followed and any committee he ever chaired got its job done."

WAS A TOP SCHOLAR

Other attorneys point to Tate's academic abilities and remark that his education didn't stop when he finished law school.

"He is a graduate of Southwestern at Memphis and went to law school at the University of Virginia," said another. "He is a Phi Beta Kappa and a member of Omicron Delta Kappa."

After completing law school and serving in the Navy, Tate returned to Memphis to serve as a law clerk in the office of the late U.S. Court of Appeals Judge John Martin Sr., father of Tate's law partner.

"He only stayed over there awhile, then I stole him away and we've been together ever since," John Martin Jr. said. "That was in 1947."

As a community member, Tate has been active. He is a former head of the Chickasaw Council of the Boy Scouts of America and had been active in scouting since 1929. He joined Troop 20 at Idlewild Presbyterian Church when he was 12.

He also is a former president of the Tennessee Bar Association and active in his church, having served on the vestry of Grace-St. Luke's Episcopal Church and as delegate to national conventions of the Episcopal Church, representing the Diocese of Tennessee.

One of his latest ventures was to take part in a special ABA task force to recommend guidelines on lawyer advertising.

He was named to the task force after the U.S. Supreme Court ruled 5–4 that lawyers could not be prohibited from advertising routine legal services.

He urged rank-and-file suggestions from the 218,000 members of the ABA to help his panel tackle the advertising question.

"Lawyer advertising has not had the best connotation," he said. "It connotes puffery and self-laudatory statements."

BOAT AND TENNIS BUFF

But Tate, a man of carefully measured words and considered thought, would not venture to guess what the task force recommendations would be. He emphasized that ABA advertising codes are only guidelines for individual state bar groups or supreme courts to consider.

"It's up to each state to set rules," he said.

Despite his heavy involvement in corporate law, family matters and the community, Tate still finds the time to do more boat maintenance than boating and he takes more than an occasional whack at a tennis ball.

"I guess he got his love of boats from the Navy," said one acquaintance. "He's on his third boat and I think he enjoys keeping it in fine trim more than running it. The only other hobby he has that I know of is playing tennis."

Decorating his office walls apparently isn't a hobby.

"The only decoration he has on the wall is a picture of his grandfather for whom he was named—Stonewall Shepherd," said an acquaintance.

It seems that the late Mr. Shepherd was an admirer of Stonewall Jackson, the Confederate general. And his parents, thinking it would be a fine thing for a man to go through life with a name of his own choosing, permitted him to name himself. He chose Stonewall—a name that was passed on to Stonewall Shepherd Tate.

NATIONAL WOMEN'S CONFERENCE

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. ULLMAN. Mr. Speaker, I am pleased to insert in the RECORD a message from our esteemed former colleague, Congresswoman Martha Griffiths of Michigan. I served on the Ways and Means Committee with Mrs. Griffiths for many years and am very conscious of the outstanding contributions she has made in many areas of public policy.

As sole author of the Equal Rights Amendment, Mrs. Griffiths has played an important role in the restructuring of our laws to guarantee American women equality of opportunity, and she continues to be a tireless and effective worker for this cause.

Mrs. Griffiths outlines some of the problems that have attended the series of meetings held in the States and territories as part of the mission of the National Commission on the Observance of International Women's Year, as well as some of their accomplishments, and gives a statement of the facts concerning the National Women's Conference to be held November 18–21 in Houston, Tex.

The article follows:

STATEMENT BY FORMER CONGRESSWOMAN MARTHA GRIFFITHS CONCERNING NATIONAL COMMISSION ON THE OBSERVANCE OF INTERNATIONAL WOMEN'S YEAR

The National Commission on the Observance of International Women's Year is midway toward the accomplishment of its mission, as mandated by the 94th Congress in Public Law 94–167. Fifty-six meetings have been held in the States and Territories. At the present time, planning goes forward for the National Women's Conference to be held November 18–21 in Houston, Texas. Federal support makes these meetings possible so we wish to inform you of recent developments. Because constituents will undoubtedly be contacting you regarding the Houston meeting, I hope it will be helpful to you and your staff to have this current information at hand.

THE PURPOSE OF THE HOUSTON CONFERENCE

The recent Bicentennial observance, coupled with International Women's Year and its World Plan of Action, focused attention upon the contributions made by women to national life and also on the need to evaluate the discrimination, based on their sex, which American women face. Among the Conference goals, established by the Congress, are the assessment of the progress that has been made by both public and private sectors to promote equality between men and women in all aspects of American life, the identification of barriers to full equality, and the development of recommendations for removal of these barriers. State meetings were held to secure the widest possible involvement in preparations for the Houston Conference. Following the national meeting, a report will be transmitted to the President, the Congress, and the general public.

THE STATE MEETINGS

The Commission established State coordinating committees, each composed of individuals who were experienced in conference organization, familiar with their States, knowledgeable about women's issues, and willing to make positive contributions to the conference process. These committees were responsible for organizing State conferences under guidelines established by the Commission.

The State meetings proved to be highly significant for several reasons. (1) Such diverse groups of women, representing a wide range of age, economic, religious, racial, and ethnic groups, have been assembled very seldom if ever in American history. Housewives, professional women, students, members of trade unions, civic volunteers, welfare mothers, and grandmothers joined together to discuss issues of mutual concern. Many of those attending had never attended a women's meeting previously. (2) Workshops were concerned with a comprehensive range of issues, all growing out of the lives of women. Much attention was given to the role of women as wife, mother, homemaker, and worker in modern American society. Resolutions related to program issues will be considered at the national meeting.

The important achievements of the State meetings were accomplished in spite of some difficulties. One source of tension was the obvious success of these meetings in responding to the felt needs of women: attendance was very high. For example, the New York State meeting, planned for about 3,000 participants, drew over 10,000 people in Albany. Such high levels of interest created administrative problems for the planners which were sometimes little understood by the participants. Some women had little experience in such large gatherings, a factor which complicated orderly procedures. Attendance figures for the State meetings are attached.

In some States, there were clearly some participants who did not intend to discuss agenda issues but aimed to disrupt the proceedings. Their efforts to debate the goal of equality for men and women, as set forth by the Congress, rather than to join with others in the analysis of recognized needs were generally unsuccessful. It is unfortunate that such activities generated in the media a distorted view of some meetings which emphasized controversy and obscured the facts of accomplishment. Several thoughtful newspaper articles relating to the origins of the disruptive efforts are enclosed.

THE HISTORICAL PERSPECTIVE

In evaluating these meetings, it is important to consider some of the changes that have already occurred in the lives of American women and now require attitudinal, societal, and legal adjustments. (1) Women can now expect to live longer. In 1900, the average woman lived to be 48 years old, in contrast to the woman in the 1970s who can expect to live 75 years or more. Most women now live beyond the demanding years of motherhood; many become widows or divorcees in need of employment and financial security; and many aging women live alone, often in poverty. (2) More women are now in the labor force. In 1900, 20 percent of all women over the age of 16 were working. By 1975, 46 percent of all women over 16 were employed outside the home. Since 1950, inflation and the rising economic aspirations of families have caused large numbers of women, often those with children, to require paid employment outside the home. These two factors, longer life expectancy and labor force participation, are merely indicative of many changes which have already taken place. They do illustrate the need for reevaluation of educational programs, employment practices, support systems for families, health care programs, and provisions for the aging.

The perspective of history also emphasizes the similarity between the arguments used to oppose contemporary efforts and those utilized over sixty years ago to oppose woman suffrage. Long ago, opponents claimed that if women became involved in politics, the American family would be destroyed. Female participations in political life, it was feared, would cause arguments between husbands and wives, and a subsequent increase in divorce. Also, the claim was made that voting mothers would neglect their children, causing an increase in juvenile delinquency. Extensive immorality was predicted when "pretty girls buttonholed strange men in the streets on Election Day" to urge support of candidates. Opponents continually identified woman suffrage with the feared alien influence of socialism. While those advocating votes for women were frequently depicted as "radicals", a group of women claiming to represent "women of every station in life" stated in the 1913 CONGRESSIONAL RECORD that to add "the distracting forces of political campaigns" to their many other duties would surely wreck their constitutions and destroy their homes. The fears aroused by the imminent threat of women voting have not been realized.

THE NATIONAL CONFERENCE IN HOUSTON

One thousand four hundred and forty-two delegates, elected at State meetings, will consider the conference agenda together and will determine the resolutions to be included in the final report. Challenges to the election of some of these State delegations have been adjudged by the Commission's legal counsel to be without adequate foundation. In addition, 400 delegates-at-large will be selected by the Commission in an effort to recgonize the special contributions some women have made to American life and to balance the total delegation to reflect the requirements in Public Law 94–167 that special emphasis be placed on "representation of low-income women, members of diverse racial, ethnic, and religious groups, and women of all ages." An exciting program of small discussion groups, lectures, and films is planned for those participants who are not elected delegates.

Please feel free to contact us if you need further information. The Commission has available a few copies of studies on the legal rights of homemakers in each State which we can forward to you, if you so desire. They can also be ordered from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402, for $1.25 each. These studies were used in workshops on the homemaker in the State meetings. We look forward to the National Conference in Houston as a historic landmark in the long struggle of American women to secure equal rights and responsibilities.

PANAMA CANAL TREATY

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. HAGEDORN. Mr. Speaker, negotiators for the Carter administration have recently arrived at an "agreement in principle" on the "basic elements" of a new treaty on the Panama Canal, and efforts are in high gear to make it appear that opposition to the treaty is not merely wrong-minded, but in some ways totally irresponsible.

My own opposition to this treaty stems not only from the basic fact that the canal legally belongs to the United States, and that we have dealt fairly with Panama and canal shippers through the years in developing a resource that would never have been developed but for our presence, but also from a concern that the treaty symbolically represents another instance of retreat by the West—and specifically by the United States—in the face of "world opinion."

As a recent article in the Wall St. Journal notes:

The third major pro-treaty argument is the fear of alienating world opinion * * * Ambassador Sol Linowitz, one of the treaty negotiators, has even stated that the new treaty

will "prove" us magnanimous to a skeptical (third) world. Yet if this world is not convinced of U.S. benevolence after our re-building of post-war Europe and our billions of foreign aid dollars to scores of underdeveloped countries, one more act of charity will not convince it. This treaty might just as well reinforce the notion that America is acting, not from generosity, but from weakness.

Paying Panama for the privilege of demonstrating our "magnanimousness", and for the opportunity to relinquish a bit of our sovereignty further heightens the absurdity of the treaty.

I would like to insert the full text of the Journal article by Dr. Roger Fontaine, director of Latin American Studies at Georgetown University's Center for Strategic and International Studies:

SCARE TALK AND THE CANAL

(By Roger W. Fontaine)

Negotiators for the Carter administration have reached an "agreement in principle" with Panama on the "basic elements" of a new treaty on the Panama Canal.

Although the exact language has not yet been fully drafted, the main features call for transfer of the canal and the 533-square mile Canal Zone to Panamanian control in 23 years. The military presence of the U.S. would end by the year 2000, after which we would continue to have the unilateral right to insure an open and neutral canal. This latter provision clearly implies the right to military intervention, although the Carter administration does not like to use that term. A major controversy will undoubtedly flare up over this point.

But what is interesting about the proposed treaty is not its novelty but its utter familiarity to those who have had the patience to follow the negotiations over the last few years. The supporting arguments are also familiar, and they will now be echoed by most of our foreign policy establishment, including Gerald Ford and Henry Kissinger. Yet these arguments are still open to serious criticism, not, as our pro-treaty pamphleteers would have it, the criticism of the uninformed, the jingoistic and the merely nostalgic.

Three scare arguments are especially prominent, and need especially to be reviewed. First, that the canal is vulnerable to sabotage. Second, that a full-blown guerrilla war might break out in Panama. And last, that in such an event the United States would be condemned by all of Latin America, if not by the entire Third World.

The Carter administration, facing a suspicious Senate and public opinion, will probably rely on these arguments in its campaign for ratification. Suggesting that the U.S. is being subjected to extortion by tiny Panama is accurate enough, but the truly important part of the equation is that we Americans are engaging in acts of self-extortion. We are frightening ourselves with disaster scenarios which although superficially plausible have never been thoroughly dissected.

FEAR OF SABOTAGE

First, the fear of sabotage. Although the canal is and always has been vulnerable, wrecking it is obviously to no one's advantage, and least of all to that of the Panamians. Since North American capital would be required to restore operations, Panama would remain as dependent as ever on the United States. Furthermore, a treaty which delays full control until the year 2000 seems unlikely to stay the hand of the young and impatient saboteur.

Second, guerilla warfare. The specter of another Vietnam is an effective weapon, no doubt, in persuading a war-weary American public to surrender its rights on the isthmus. But the extent of the problem remains to be analyzed properly.

The potential does exist for small urban terrorist squads, recruited from Panama's large student population, to make lightening raids into the zone. They might stage robberies, kidnappings and assaults on police or civilian functionaries in the zone as well as in Panama itself. U.S. military and police units would find it tempting to chase these raiders back into Panamanian territory, thus provoking nationalist outcries.

Yet a truly serious insurgency is unlikely. Panama is not Vietnam in size or resources, nor does it have a nearby neighbor willing to aid the "liberation struggle." Furthermore, the Panamanian chief, General Omar Torrijos Herrera, is unlikely to provide the training and logistical support necessary to transform urban terror squads into full-fledged rural insurgents. Declaring war, even sub rosa war, on a superpower is still a dicey business.

Moreover, Gen. Torrijos may well find it more in his interest to stamp out, than to encourage insurgents. The regime remains extraordinarily dependent on foreign investment, foreign banks and, yes, foreign tourists—none of whom would enjoy working and playing in Belfast-style surroundings.

Finally, Gen. Torrijos is even less likely to enlist outside material support, even from such friends as Fidel Castro and Muammar Khadafy. The risks are too great and these gentlemen have too many other preoccupations. The Cuban leader, moreover, knows very well that Latin American guerillas have an extraordinary rate of failure. Their only hope would be to wear down U.S. public opinion through a sustained campaign of terror, not a wholly irrational hope, but far from the worst-case scenario of the treaty's supporters.

The third major pro-treaty argument is the fear of alienating world opinion, a familiar scenario which arises whenever there is a question of using force to insure American interests. Ambassador Sol Linowitz, one of the treaty negotiators, has even stated that the new treaty will "prove" us magnanimous to a skeptical (third) world. Yet if this world is not convinced of U.S. benevolence after our rebuilding of post-war Europe and our billions of foreign aid dollars to scores of underdeveloped countries, one more act of charity will not convince it. This treaty might just as well reinforce the notion that America is acting, not from generosity, but from weakness.

To criticize this argument is to question the notion that what others may think must control our policy. No serious man should be concerned with critical opinion of Panama emanating from Conakry or Kampala, or much less Moscow.

Yet Latin America is a somewhat different case since, with the exception of Cuba, none of its countries are our sworn enemies. The depth of our ties with this region is matched only by those with Western Europe. Yet even though no Latin American regime publicly supports the United States, the depth of pro-Panamanian feeling varies considerably from country to country. It is strongest in Venezuela, Colombia and possibly Mexico; it is weakest in the southern cone of South America. For example, Brazilians, heavy users of the canal, have privately expressed deep misgivings over Panamanian control.

ONLY FIVE NATIONS

Despite Gen. Torrijos's numerous meetings with regional leaders, the last one held in Bogota early this month, he has managed to get the collective support of only five other nations.

Moreover, a surrender of the canal is not likely to gain us lasting respect or affection. And why should it when the obvious way to deal with us is to make more demands in as unfriendly a fashion as possible?

Beyond these arguments, our reluctance to hang on to the canal reflects a sense of uneasiness, of guilt at maintaining what is so glibly described as a "colonial enclave." Our presence simply can't be squared with the radical anticolonial (to wit, antiwestern) sentiment that is now the common intellectual coin of the globe.

Yet it must be pointed out that Panama has benefitted mightily from a resource that it alone could not exploit. It is a fact of life that the canal is a major international waterway that simply cannot be operated, much less defended, by one of the smallest countries in Christendom. That it would strike many as arrogant to state these facts is a mark of the extent to which we have absorbed the doctrine of international egalitarianism. National duty is not easily transferred nor fundamental geopolitical facts altered by political bombast.

The United States must retain the major role in running and defending the canal. It is still open to question how precisely to define that role, as well as the nature and extent of Panama's contribution. What should not be open to debate is the right of this country and the other users to an open and secure passageway between the planet's two principal oceans.

In spite of the attempts to secure ratification through scare arguments, this treaty does not fit these requirements.

TV VIOLENCE SPARKS IMITATIONS

HON. MORGAN F. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. MURPHY of Illinois. Mr. Speaker, study after study over the past decade has linked television violence to violent acts by young people. This connection is understandable. According to A. C. Nielsen, the typical high school graduate has spent some 15,000 hours watching television. That is 4,000 hours more than he has spent in school. This 18-year-old viewer has witnessed an estimated 18,000 murders and innumerable beatings, shootings, robberies, and bombings.

Small wonder, then, that as the dosage of TV violence has increased over the past decade, so has violence in American society. Since the 1960's, crime and violence have been increasing nearly 14 times faster than our population growth. In fact, murder is the fastest growing cause of death in the United States.

Although most of the 2,300 studies and reports on TV violence point to its destructive influence, the three major networks have paid little heed to warnings that TV can be a breeding ground for criminals. A recent study issued by the House Subcommittee on Communications concludes:

(The) continuing high level of violence * * * suggests that the industry has been unable to come to grips with the problem—of TV violence—despite years of attention to it.

Mr. Speaker, I would like to draw my colleague's attention to an article I have written on this important subject. The article appeared in the Daily Calumet on August 30, 1977.

TV VIOLENCE SPARKS IMITATIONS

(By Representative Morgan F. Murphy)

On March 8, 1973, the CBS television network broadcast a movie called "The Marcus-

Nelson Murders," which depicted a brutal rape and murder of a young woman. Three weeks later, a 17-year-old Atlanta boy confessed to the rape and murder of a young woman, saying that he had patterned his killing after the CBS movie.

On Sept. 30, 1973, ABC aired a movie entitled "Fuzz." The film portrayed a band of youths who, for the sake of cheap thrills, drenched some tramps with gasoline and set them ablaze. Two days later in Boston, six young men forced 25-year-old Evelyn Wagner to pour gasoline over herself in an empty lot and then set her afire. She died four hours later.

On Sept. 10, 1974, NBC broadcast a movie called "Born Innocent." The movie showed some female inmates in a juvenile detention home sexually assault a girl in a shower. Four days later, three San Francisco girls, ages 10 to 15, made a similar attack on a nine-year-old girl.

These are just a few grisly examples of how television violence has stimulated young persons to commit violent acts. They are not isolated incidents. Study after study over the past decade has linked television violence to violent acts by young persons.

The connection between TV violence and antisocial behavior is understandable. According to A. C. Nielsen, the typical high school graduate has spent some 15,000 hours watching television. That is 4,000 hours more than he has spent in school. This 18-year-old viewer has witnessed an estimated 18,000 murders and innumerable beatings, shootings, robberies, and bombings.

Small wonder, then, that a recent study commissioned by ABC showed that 22 of 100 juvenile offenders admitted copying their criminal techniques from television. In January, TV Guide reported that four out of 10 inmates at Michigan's Marquette maximum security prison attempted crimes based on what they had seen on TV crime shows.

As the dosage of TV violence has increased over the past decade, so has violence in American society. Since the 1960s, crime and violence have been increasing nearly 14 times faster than our population growth. In fact, murder is the fastest growing cause of death in the U.S.

Although most of the 2,300 studies and reports on TV violence point to its destructive influence, the three major networks have paid little heed to warnings that TV can be a breeding ground for criminals. According to a July report issued by the House Subcommittee on Communications, while violence temporarily receded in 1975 (the year of the "family hour"), it increased in 1976 and has been steadily climbing ever since. The subcommittee concluded: "This continuing high level of violence suggests that the industry has been unable to come to grips with the problem (of TV violence) despite years of attention to it."

Some major civic and religious organizations have mounted campaigns against TV violence. The 6.6 million-member PTA has been holding regional forums to mobilize c'tizens against TV violence. Last February, the American Medical Association which has labeled television an "environmental hazard," asked 10 major corporations to review their sponsorship of excessively violent programs.

The public is clearly disenchanted with television violence. An Aug. Harris poll revealed that 71 percent of the American people feel that there is "too much violence" on TV, and 71 percent disapprove of the kind of violence shown.

Of course, parents cannot pin all the blame for TV violence on the networks. A Feb. Gallup poll revealed that 46 per cent of the parents surveyed did not put any restrictions on the types of programs their children watch. If parents are serious about reducing present levels of TV violence, they must take an active interest in monitoring what their children watch.

What can the concerned parent do about TV violence? One authority on TV violence, Eugene Methvin, suggests the following:

Write your local TV station whenever a specific program offends you. Ask the station's manager to put your letter and his reply in the "public inspection file," which is reviewed by the FCC when the station's broadcasting license is up for renewal. Send copies of your letter to your local PTA and other public interest groups, and to the Senate and House Communications subcommittees.

Write advertisers of shows that you feel are too violent. Tell them you disapprove of such shows.

If you are strongly offended by a station's programming, file a formal complaint with the FCC. For information on how to demand a hearing to oppose a station's license renewal, write to the Citizens Communication Center, 1914 Sunderland Place, NW., Washington, D.C. 20036.

While the FCC does not have the authority to censor TV programs, it does have the power to review whether a TV station is operating in the public interest. Citizens have a duty, therefore, to make sure that local TV stations are living up to their community's expectations.

SOCIAL SECURITY

HON. BARBER B. CONABLE, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. CONABLE. Mr. Speaker, this morning the minority leader, JOHN RHODES, and I unveiled a major Republican initiative dealing with the problem of social security. I think that the comprehensive 15-point proposal deserves the most serious consideration by my collegues and hope they would give it their full attention. For this reason, I ask unanimous consent that three different items be printed in the RECORD immediately following my remarks.

They are: (1) A summary statement describing the proposal; (2) an indepth background paper providing details of the initiative; and (3) a statement provided by Mr. RHODES and myself, supported by Messrs. ARCHER, STEIGER, KETCHUM, and SCHULZE, all of whom are Republicans on the Social Security Subcommittee:

STATEMENT ON A NEW REPUBLICAN INITIATIVE ON SOCIAL SECURITY BY CONGRESSMEN RHODES, CONABLE, ARCHER, STEIGER, KETCHUM, AND SCHULZE

We believe that the nation's social security system should be restored to financial stability on a long range basis. We owe this not only to the 100 million Americans who support the system and the 34 million who already benefit from it, but to the next generation as well. They deserve no less.

We also believe that a number of long-standing inequities in the system, especially those related to the treatment of women, should be corrected.

We further believe that the system should be adjusted to changing American life styles, that beneficiaries no longer should be penalized for continuing to lead productive lives, and that we should move closer toward truly universal social security coverage.

And we believe these desirable goals can—and should—be attained without: (1) altering the basic structure or nature of the system; (2) adding heavily to tax burdens in the future; or (3) requiring any tax increases over the next several years, in light of an uncertain economy and current payroll levies on both employers and employees.

Toward these ends we are presenting, for the consideration of the Congress and the American people, a comprehensive 15-point social security proposal. It would place the system on a sound financial footing for at least the next 75 years, it would solve the immediate financial shortfall in the trust funds, it would strengthen the system's insurance character, and it would correct a number of inequities. It would do all this with no tax increase until 1982 and with less than a 1¼ percent increase through the year 2050.

The proposal does not, it should be emphasized, offer the myth of something-for-nothing. It is realistic. There are prices to pay for the problems it solves. But we feel the prices are reasonable, especially in view of obvious alternatives: (1) a drastic lowering of benefits, (2) a heavy increase in payroll taxes now and in the future, or (3) the illusory use of general revenues, which would require substantial borrowing by the Treasury, an even bigger public debt, and eventually higher taxes and more inflation for all.

Our proposal, which includes a number of "tradeoffs," should be considered as a unit. Its parts—interdependent and not interchangeable—have been blended carefully into a particular whole, and it should be judged as such.

As far as we know, this proposal stands alone. If there is another—to solve the system's financial problems, to correct so many of its inequities, and yet to cost the taxpayers so relatively little—it has remained well hidden from public view.

Specifically, our proposal would:

A. Meet the immediate financial needs of the Social Security Trust Funds by:

(1) Reallocating taxes collected, between the Old Age and Survivors Insurance Fund (OASI), and the Disability Insurance (DI) Fund, which is expected to become exhausted soon if preventive steps are not taken.

(2) Temporarily diverting three-fourths of a Medicare tax rate increase (0.2% per employee and employer) already scheduled to take place next year, to the OASI and DI Trust Funds. This diversion, which would not damage the Medicare Fund, would continue only through 1981.

(3) Permitting any of the three major Trust Funds (OASI, DI and Medicare) to borrow from another if necessary and with appropriate arrangements for repayment with interest. This would be a permanent provision, which should serve as a "fail safe" device against the insolvency of any of the funds.

B. Put the system on a sound financial basis at least 75 years into the future by:

(1) Decoupling the automatic benefit adjustment mechanism (to correct a flaw in the mechanism) and indexing workers' earnings records to wage trends. These changes follow generally the recommendations of both the Ford and Carter Administrations. This proposal would, however, adjust the ultimate benefit level to account for overexpansion that has occurred since the automatic adjustment flaw was enacted. A savings clause would be included guaranteeing that no future retirees would receive lower benefits than they would have received under the present-law benefit formula as it was at the time of the change. (Decoupling and wage indexing would reduce the system's long-range deficit by slightly more than half.)

(2) Advancing gradually and slowly—from 65 to 68—the age at which full retirement benefits would be payable. The adjustment would not begin until 1990 and would not

reach maturity until 2001. Each year during that span the full benefit retirement age would be advanced by one quarter year. Workers could continue to retire as early as age 62 but with slightly greater actuarial reductions than at present. Gradual and distant implementation of this change, which is in keeping both with efforts to abolish mandatory retirement policies and with increased longevity and productivity of American workers, is designed to permit orderly retirement planning. (This provision would further reduce the system's deficit, by about 20%.)

(3) Permanently reassigning one-fourth of the Medicare tax rate increase, scheduled next year, to the OASDI Trust Funds. This amount approximately equals additional money which would enter the Medicare Fund because of other provisions of this proposal.

(4) Increasing tax rates for employees, employers and the self-employed in three stages; 0.5 percent in 1982, 0.3 percent in 1990, and 0.4 percent in 2000. This means that tax rates would rise, under this proposal, less than 1-and-¼-percent over a 75-year span. (The Medicare tax reassignment and the three-stage rate increase would reduce the remaining deficit to less than 0.5% of taxable payroll—an actuarily sound margin.

C. Make four significant improvements in the treatment of women under Social Security, by:

(1) Providing a new benefit—a "working spouse's benefit"—designed to give adequate recognition to wives who work outside the home. The benefit would be equal to (a) the higher benefit amount due either as a worker or the spouse of a worker, PLUS (b) 25 percent of the smaller of those two benefits.

(2) Reducing from 20 years to five years the duration-of-marriage requirement for one spouse to receive a benefit based on the other's earnings record. This provision is designed to remove what many divorcees have come to view as an unfair and arbitrary requirement.

(3) Ending the cutoff or reduction of benefits for beneficiaries who remarry. This provision is included largely because many widows who rewed before reaching age 60, and divorced wives who remarry at any age, lose entitlement to their benefits under current law.

(4) Amending the Social Security Act to remove all remaining sexually discriminatory language.

D. Move the nation's social insurance system closer to the ideal of universal coverage by providing for the participation of all federal government employees, including Members of Congress not otherwise covered, by 1979. The objective is integration of the Civil Service Retirement and Social Security systems without reducing benefits or protection for, or increasing contributions from, participants in either program.

E. Remove the earnings limitation imposed on beneficiaries. Under present law, benefits are reduced and eventually eliminated for earnings above $3,000 per year. (The limitation is adjusted annually.) This proposal would boost the limit to $5,000 in 1978, to $7,500 in 1979, and remove it entirely in 1980.

F. Freeze the minimum primary benefit at its current level of $114.30 per month, but increase the special minimum benefit from a maximum of $180 to $219, and make it subject (as are other benefits) to automatic annual adjustments in the future. The minimum primary benefit goes, in large numbers, to governmental employees who either "moonlight" or retire early and work just long enough under Social Security to meet minimal eligibility requirements. The special minimum applies only to those who have worked many years at relatively low wages under the system.

G. Limit disability and survivorship benefits to the maximum primary benefit payable to a worker reaching age 62. Under present law, some younger beneficiaries receive benefits substantially higher than those awarded older beneficiaries who have worked longer under the system. This provision would remove that disparity.

This proposal is not being offered as a "trial balloon" or in a partisan spirit.

It is being presented, in light of alternatives already proposed, to reassure the millions of Americans who are concerned about social security that the system not only can be made financially secure, but can be made more equitable for generations to come. And this can be accomplished without imposing unacceptable tax burdens or dipping into the deceptive pool of general revenues.

We hope and trust it will be given serious consideration by our Democratic colleagues in the Congress as well as by the Administration. We are sending copies of the proposal to the President and the Secretary of Health, Education, and Welfare, and are confident they will give it their attention promptly.

The Subcommittee on Social Security of the Committee on Ways and Means is scheduled to begin, on Monday morning, the development of legislation dealing with the system's financial problems. We are particularly interested in having our proposal considered in that forum, and stand ready to present it there.

Of all interested parties, we ask only that the proposal be given fair-minded consideration, not in fragmented form, but in its entirety.

The proposal is described in greater detail in a separate document entitled, A Proposal for Financial Restoration and Equity Strengthening of the Social Security System. Our staff members and consultants will be pleased to discuss it in greater detail at your convenience.

PROPOSAL FOR FINANCIAL RESTORATION AND EQUITY STRENGTHENING OF THE SOCIAL SECURITY SYSTEM

GENERAL OBJECTIVES

I. Restoring the Social Security system to financial soundness, now and for at least the next 75 years.

II. Correcting long-standing inequities in the treatment of women under Social Security.

III. Strengthening the insurance characteristics of the system.

IV. Moving the system closer to the ideal of universal coverage.

V. Adjusting the system to changes in life-and-work-styles of the American people.

SPECIFIC PROVISIONS

1. Removes the earnings limitation on beneficiaries in 3 stages by 1980.

2. Advances the age of eligibility for full retirement benefits, slowly and gradually, from 65 to 68, between 1990 and 2001.

3. Brings all Federal government employees under social security coverage by 1979.

4. Provides a new "working spouse's benefit," primarily to aid wives who work in covered employment.

5. Reduces from 20 years to five the duration-of-marriage requirement for divorcees to receive a spouse's benefit.

6. Ends the requirement that some beneficiaries, notably widows, lose benefits upon remarriage.

7. Eliminates all remaining sex discrimination language from the Social Security Act.

8. Requires no tax increase until 1982, then a 3-stage rate advance totaling less than 1¼% over the next 75 years.

9. "Decouples" and wage indexes to correct a flaw in automatic benefit adjustment provision and to stabilize benefit ratios.

10. Freezes the minimum primary benefit, but increases the special minimum benefit (for those with many years' work at low wages).

11. Temporarily reassigns (through 1981) ¾ of the Medicare tax increase, already scheduled next year, to OASDI Trust Funds.

12. Permanently reassigns (after 1981) ¼ of the 1978 Medicare increase to OASDI Funds.

13. Reallocates taxes between OASI and DI Trust Funds.

14. Permits any one of the Trust Funds (OASI, DI & Medicare) to borrow from another to prevent exhaustion.

15. Limits survivorship and disability benefit amounts to the maximum payable to a retiree under the system.

This proposal has five general objectives.

First, it would put the social security system on a sound financial footing for at least the next 75 years.

Second, it would strengthen the insurance character of the system.

Third, it would improve the treatment of women under the system.

Fourth, it would make long-needed adjustments in the program to reflect changes in the living and working patterns of the American people.

Fifth, it would move closer to universal coverage, which is appropriate for a nationwide, mandatory social insurance system.

The most important objective of the proposal is, of course, restoration of the financial soundness of the system, which faces an estimated deficit of 8.2 percent of taxable payroll over the next 75 year. This proposal would virtually eliminate the long-term deficit. It aso would solve the serious cash-flow problems facing the Social Security trust funds now and in the near future.

One of the two major trust funds—the one providing for payment of disability benefits—is estimated to become exhausted in early 1979 (or possibly late in 1978). This proposal would avoid that contingency, without requiring any increase in taxes over those scheduled in present law, on either employers or employees, until 1982.

PROPOSAL ANALYSIS

The proposal has 15 distinct elements.

Three elements deal with the short-term trust fund problem—by reallocating monies among the funds and by permitting one fund to borrow from another.

Three more deal with the long-range financial deficit of the system, through decoupling-and-earnings-indexing (to correct a flaw in current law and to stabilize future benefit ratios) and through modest tax adjustments and increases between 1982 and 2000.

Four deal with sex discrimination and the treatment of women through: (1) liberalizing substantially the benefit legibility of divorced spouses; (2) providing a new "working spouse's benefit", primarily to give greater recognition to wives who work; (3) eliminating the reduction or cutoff of benefits to widows or widowers who remarry; and (4) removing all remaining sexually discriminatory language from the Social Security Act.

One element would bring the system closer to the ideal of universal coverage, by requiring the participation of all Federal employees by 1979.

Another element responds to a major change in our society—the increasing longevity and productivity of American workers—by advancing slowly and gradually, in the future, the retirement age for full Social Security benefits. This would *not* prevent workers from retiring at age 62 with actuarially-reduced benefits. It *would* move, eventually to 68, the age at which full retirement benefits are payable.

The three final elements are designed to improve equity and strengthen the insurance character of the system by:

(1) Eliminating one of the most unpopular provisions of the Social Security Act—the one that imposes a limit on the earned income of beneficiaries;

(2) Freezing the minimum primary bene-

fit but also increasing the special minimum benefit for those who have worked under the system for many years at low wages and

(3) Providing that benefits for the disabled and survivors may not exceed the maximum benefit payable to a retiree.

I. SHORT-TERM FINANCING

The financial problems facing the system between now and 1982 would be taken care of through: (1) reallocation of Social Security taxes between the Old-Age and Survivors Insurance (OASI) and Disability Insurance (DI) Trust Funds; and (2) a temporary reassignment of an increase in the tax rates for the Hospital Insurance (HI) Trust Fund, which already (under existing law) is scheduled to take place next year.

The current OASDI tax rate of 9.9 percent (on employers and employees combined) now is allocated: 1.15 percent for DI and 8.75 percent for OASI. It should be reallocated: 1.5 percent for DI and 8.4 percent for OASI. The increased allocation of 0.35 percent to the DI Trust Fund should be sufficient to prevent it from becoming exhausted by 1979 (as can be expected without a change in the law). Reallocation also should cause both Funds to remain viable at least until 1981.

In order to assure further the viability of these two Trust Funds, and to cover the cost of certain improvements in the system starting next year, part of the scheduled increase in the HI tax rate should be diverted temporarily to the OASDI Trust Funds. Present law calls for an increase in the HI tax rate, starting in 1978, from 0.9 percent to 1.1 percent for each employee, employer, and self-employed person. If three-fourths of this increase, or 0.15 percent per worker and employer, were directed to the OASDI Trust Funds beginning January 1, 1978 and ending December 31, 1981, this would not only bolster those two Funds, but also would permit a three year phase-out of the earnings limitation starting January 1, 1978.

[In addition, one-fourth of the 1978 increase in the HI tax rate (i.e., 0.05 percent for both workers and employers) would be permanently directed to the OASDI Trust Funds after 1981. This would not adversely affect the operation of the HI Trust Fund, because the amount of money involved in the diversion approximately equals the savings to this fund as a result of extending coverage to federal employees.]

To guarantee the financial viability of all three Trust Funds over the next several years, each should be permitted to borrow from another, solely for the purpose of preventing exhaustion and with appropriate arrangements made in each case for repayment with interest.

II. LONG-RANGE FINANCING

(1) The long-term deficit of the system would be reduced by slightly more than 50 percent through a process called "decoupling," plus wage indexing of the earnings record of the insured worker.

Decoupling was made necessary by what has been termed an inadvertent flaw in the 1972 law which adjusts benefits automatically according to annual increases in the Consumer Price Index. Under the present coupled system, the CPI increases are applied both to payments already being paid to those on the benefit rolls and to the benefit formula which is applicable to future beneficiaries. Decoupling would apply the cost-of-living percentage increases only to current beneficiaries.

Decoupling would be accompanied by indexing of a worker's covered earnings record. Virtually all observers of the social security system have agreed that decoupling plus indexing should be accomplished to achieve rational and reasonable benefit levels in the future. There has been disagreement, however, as to the level at which decoupling should take place, and as to whether the earnings record should be indexed to prices rather than wage trends. Both the Carter and Ford Administrations proposed decoupling at current benefit levels and indexing of the earnings record according to wages.

This proposal follows the wage-indexing approach, on the main ground that, for future retirees, it more equitably stabilizes the wage replacement ratio; that is, the relationship between the benefits they receive and the most recent covered earnings on which those benefits are based. The proposal would, however, adjust the ultimate benefit level for the overexpansion that has occurred since the automatic-benefit-increase provision was enacted.

It is an accepted fact that decoupling is made necessary because of a "mistake" in the 1972 amendments to the Sociay Security Act. The "mistake" has led to overexpansion of benefit levels since that time, and would lead to increasingly exaggerated overexpansion in the future. It seems logical to have the ultimate benefit level adjusted for the overexpansion which has taken place since the "mistake" was made.

Starting just before the "mistake" was made, and continuing to the present time, the cost-of-living has risen 53.0 percent, while Social Security benefits have increased 62.1 percent. Thus, benefits have increased about 6 percent more than the cost-of-living over that span of time (162.1 compared with 153.0 produces a difference of about 6 percent). Accordingly, it is reasonable to decouple at a 6 percent lower level ultimately.

This does not mean that benefits would be reduced for those currently receiving benefits. They would be treated exactly as under existing law. Whenever the cost-of-living (as measured by the Consumer Price Index) advances in a year by 3 percent or more, benefits would continue to be increased commensurately.

Nor does it mean that dollar amounts of benefits paid in the future would be lower than present levels. To the contrary, dollar amounts—as well as the purchasing power of benefits—for future retirees would be higher than present levels.

A major difference between this proposal and the present system is that wage replacement ratios (the relationships between benefits and recent covered earnings on which those benefits were based) would remain stable in the future.

It is important to note that, under this proposal, a savings clause—or guarantee—would be provided so that no future retiree would receive less than he or she would under the present-law formula as it was at the time of the change. In other words, retirees in the future would have their choice. They could take the benefit available under present law at the point of changeover, or they could take the benefit provided under the new method, whichever is larger.

(2) The long-range deficit would be reduced further (by about 20 percent) through a slow and gradual advancement in the retirement age at which full benefits are payable. This proposal would move that age from 65 to 68, by degrees, starting in 1990 and ending in 2001.

When the Social Security system was enacted, 42 years ago, American workers were not living as long as they are now, nor were they as productive for as long a period of time. From time to time, the system has responded to other changes in the working and living habits of the people it serves, and it is reasonable for the system to adjust to these trends also.

It should be borne in mind that the longevity of the American people is expected to continue increasing in the foreseeable future. The birth rate, meanwhile, has declined drastically and may well continue downward (or else remain at a low level) for years to come. This means there will be fewer workers making contributions, but more retirees receiving benefits. In view of such projections, because of the improvement in mortality as well as the physical conditions of older people, and in light of wide-spread dissatisfaction with mandatory retirement, the proposal above can have a generally salutary impact both on the Social Security system and on the social and economic lives of the American people.

It is important to note that workers could continue to retire at earlier ages—62, for example—but with slightly greater actuarial reductions than at present, to take into account the longer period of time over which the beneficiaries could be expected to receive payments.

Under the proposal, the standard retirement age of 65 would be increased by three months (or one-quarter year) each year starting in 1990. By the year 2001, the minimum retirement age for full benefits would have been increased gradually to 68.

A gradual implementation of this change, with a starting date almost 15 years in the future, would give people sufficient time to plan for their retirement without severe disruption in any one year, and would permit management and labor to revise employment practices carefully and systematically.

(3) As noted earlier (on page 5), the long-range deficit in the OASDI Trust Funds would be reduced further by a permanent reassignment, starting in 1982, of a small portion of the Hospital Insurance tax rate. This redirected rate would equal 0.05 percent for workers and employers.

(4) To further strengthen the financing of the system in future years, contribution (tax) rates for employees, employers, and the self-employed would be increased by 0.5 percent in 1982, 0.3 percent in 1990, and 0.4 percent in 2000. Thus, the net addition to the presently scheduled OASDI tax rates over the next 75 years would be less than 1¼ percent on employees, employers, and the self-employed.

III. TAX TREATMENT OF WOMEN AND SEX DISCRIMINATION

The proposal would make four significant changes in the Social Security Act designed to improve the treatment of women and to remove remaining sex discrimination language.

First, the proposal would reduce from 20 years to 5 years the duration-of-marriage requirement for one spouse to receive a benefit based on the other's earnings record. Under present law, a divorced spouse retains auxiliary benefit rights only if the divorce occurs after 20 full years of marriage. Critics of the system long have contended that this requirement was unfair, arbitrary, and unrealistic in view of societal changes.

Second, the proposal would provide a new benefit—a "working spouse's benefit". Under present law a covered worker is always eligible for a benefit based on his or her own earnings record. But if the worker also becomes entitled to an auxiliary benefit, such as a spouse's benefit, he or she is entitled, in essence, only to the higher of the two benefits available. A number of working spouses (especially wives) have found that they would have been as well off financially, as far as Social Security benefits were concerned, if they had never left the home to enter the labor force. To alleviate this problem and to provide greater recognition of the employment record of a working spouse, the proposal would make the following changes:

1. A spouse who is eligible for an auxiliary or survivor benefit, who also worked under Social Security, could receive a new "working spouse's benefit", which would be equal to (A) the larger amount due either as a spouse or as a worker, plus (B) 25 percent of the smaller of the two benefits (but in

no event greater than the maximum primary benefit).

2. Any pension or benefit based on governmental employment not covered under Social Security would be considered as a primary benefit in determining the amount of the Social Security auxiliary or survivor benefit payable. (This change is designed to remove what amounts to a "windfall" benefit in some cases under present law. For example, if a wife worked under Social Security for her entire career, she would be entitled to a primary benefit based on her own earnings record. If her husband had worked exclusively under a state employee's retirement system, he would be entitled to a pension under that system and also might be entitled to an auxiliary (spouse's) benefit based on his wife's Social Security record. Inasmuch as auxiliary and survivors benefits are based more on social adequacy (or need) than on individual equity, the "windfall" situation described above is not one which the Congress contemplated when it provided for survivors and auxiliary benefits in the first place.)

3. The proposal would end the cutoff or reduction in benefits for widows or widowers who remarry. Under the proposal, benefits would not be terminated because of a beneficiary's remarriage or marriage at any age. Under present law, for example, a widow's remarriage before age 60, or a surviving divorced wife's remarriage at any age, will prevent entitlement to benefits unless the subsequent marriage ends. A number of persons, especially those living in retirement communities, have complained that current law requires them to "live in sin" in order not to lose Social Security benefits.)

4. The proposal also would amend the Social Security Act to remove all remaining sexually discriminatory language. (Example: The terms "husband's benefit" and "wife's benefit" would be replaced by one term, "spouse's benefit."

IV. UNIVERSAL COVERAGE

Universal coverage is a natural and desirable goal of any nationwide, mandatory social insurance system. Although about nine of every 10 American workers now participate in the U.S. social security system, it is increasingly difficult to justify to the "nine" why the "one" is not covered. This is especially true in view of the impact of the Social Security payroll tax on the incomes of contributors.

Public discussion of universal coverage has taken place for many years. It has long appeared that a large majority of Americans favor it, but no action has been taken by the Congress. Many difficulties—legal and administrative—have stood in the way.

But the latest Advisory Council on Social Security stated that despite these difficulties, "it is of great importance from the standpoint of assuring good protection for all workers on an equitable basis that all jobs be compulsorily covered under social security." The Council urged the Congress to move promptly toward that goal.

A major step in that diretcion would be mandatory coverage for all Federal workers. Integration of the Civil Service Retirement and Social Security systems would be an extremely difficult task, crossing jurisdictional boundaries of major committees in both the House and Senate, and involving many complex technical problems. But integration could be achieved, in an equitable way, within one year.

Therefore, an important objective of this proposal is the immediate enactment of legislation requiring the various committees of jurisdiction to work together over the next year and produce a workable—and equitable—plan for an integrated system, to become effective no later than January 1, 1979.

An integrated system would in no way prevent the continuance of the Civil Service Retirement system as a supplement to Social Security.

V. INSURANCE AND EQUITY STRENGTHENING

To strengthen the insurance character of the system and, at the same time, to provide greater equity, the proposal also would:

1. Eliminate the earnings limitation on beneficiaries. This is probably the most unpopular provision of the Social Security Act. More bills have been introduced to abolish the limitation than to make any other change in the system. During recent public hearings before the Ways and Means Committee's Subcommittee on Social Security, repeal of the limitation was the most widely discussed item. Witnesses pointed out that the limitation enforces the under-utilization of experienced older people and also encourages retirees to adopt artificial work and pay practices. Under this proposal, the limitation would be phased out over a 3-year period, by increasing the anual exempt amount of earnings to $5,000 for 1978 and to $7,500 for 1979, and by removing it entirely for 1980 and thereafter.

2. Freeze the minimum primary benefit at its current level of $114.30 per month, but at the same time increase, now and in the future, the special minimum benefit.

Freezing the minimum primary benefit follows a recommendation of the latest Advisory Council on Social Security, and is designed to lessen, and eventually eliminate, certain "windfalls" accruing to persons who work in covered employment for very short periods of time and thus acquire rights to the relatively large minimum, which has been weighted in favor of low-income workers.

In practice, a substantial number of Federal, state, and municipal government workers, outside the Social Security system, have either "moonlighted" or retired early from their regular jobs and worked under Social Security just long enough to obtain the minimum primary benefit.

Ironically, the minimum primary benefit was not established to help those short-term workers, but to assist other workers who had labored long under the system, at low wages. Recognizing that the minimum primary benefit was not serving its basic purpose, the Congress in 1972 added a "special minimum benefit" to better take care of the workers with many years of covered service at relatively low wages.

In so doing, the Congress did not change the minimum primary benefit, which continues to be of greatest value to those who need it least. This proposal would correct that anomaly by freezing the minimum primary benefit while improving the special minimum benefit.

The special minimum is now $180 per month for workers with at least 30 years of coverage. When the $180 figure was adopted in the 1973 Social Security Amendments (effective for March 1974), it was not made subject to the automatic adjustments for changes in prices; if it had been, it would now be $219.

Under this proposal, the special minimum would be increased to $219 in January 1978 and would be subject to automatic adjustment thereafter (as are all other benefits).

3. Provide that benefits for the disabled and survivors never could be based on a primary benefit in excess of the maximum primary benefit for a worker reaching minimal retirement age of 62 in the year of death or disability.

At least partly because of the technical flaw in the automatic-adjustment-of-benefits provision (discussed above), benefits to young and middle-aged beneficiaries may be unduly large—in some cases considerably larger than those awarded to older disabled persons or retirees with much longer earning records (and therefore with greater contribution payments). This disparity in benefit levels (which would be increased if no changes are made) has long been considered inequitable in a national social insurance program. The proposal would end that disparity.

PROPOSAL FOR FINANCIAL RESTORATION AND EQUITY STRENGTHENING OF THE SOCIAL SECURITY SYSTEM

Impact on long-term OASDI Trust Funds' Deficit

Provision	*(Loss or gain) as percentage of taxable payroll*
Decoupling and wage-indexing based on pre-automatic-benefit-adjustment flaw	+4.50
Freezing regular minimum benefit and updating special minimum benefit	+0.07
Increasing the retirement age	+1.65
Limiting disability and survivor benefits to maximum retiree benefits	+0.02
Covering Federal employees	+0.10
Cutting marriage duration requirement for divorcees' eligibility from 20 to 5 years	−0.01
Removing benefit cutoff or reduction for marriage or remarriage	−0.05
Adding working spouse's benefit, with offset for other government pension	−0.45
Ending the earnings limitation	−0.20
3-stage tax increase and HI tax diversion	+2.13
Total Net Effect	7.76
Deficit under Present Law	8.20
Deficit under Proposal	−0.44

NOTE: The system is considered to be within safe actuarial bounds (sufficiently close to absolute balance) if the deficit is no greater than 0.50% of taxable payroll.

SHORT-TERM COST IMPACT OF PROPOSAL ON OASDI PROGRAM

[In billions]

Year	Contributions from Federal employees	Transfer of HI taxes	Increase in OASDI taxes	Cost of change in earnings test	Net cost effect
1978		$2.7		$0.4	+$2.3
1979	$4.0	3.0		1.6	+5.4
1980	4.2	3.2		7.0	+.4
1981	4.5	3.4		7.1	+.8
1982	4.8	1.2	$11.9	7.3	+10.6
1983	5.1	1.2	12.5	7.4	+11.4
1984	5.4	1.3	12.9	7.6	+12.0

ESTIMATED OPERATIONS OF OASDI TRUST FUNDS UNDER PROPOSAL FOR FINANCIAL RESTORATION AND EQUITY STRENGTHENING OF SYSTEM

[In billions]

Calendar year	Total income[1]	Total outgo	Net increase in funds	Funds at end of year
1977	$82.1	$87.7	−$5.6	$35.5
1978	93.5	97.7	−4.2	31.3
1979	107.6	111.3	−3.7	27.6
1980	117.6	126.5	−8.9	18.7
1981	125.8	136.5	−10.7	8.0
1982	145.0	146.4	−1.4	6.6
1983	154.6	156.4	−1.9	4.7
1984	164.6	166.4	−1.8	2.9
1985	175.3	175.8	−.5	2.4
1986	186.8	185.5	+1.3	3.7

[1] Including interest on invested assets.

Note: After 1986, trust funds balance is estimated to increase each year.

THE MINIMUM WAGE PROBLEM: A LABOR DAY PUZZLE

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. BAUMAN. Mr. Speaker, the unemployment statistics released by the Department of Labor last Monday indicate that the ranks of the jobless are again increasing. Teenagers, and especially black Americans are finding it more difficult than ever before to become gainfully employed.

The House is soon expected to consider the so-called Fair Labor Practices Amendments of 1977 which will increase the minimum wage, among other things. While the intent of its legislative champions is noble, the bill to increase the minimum wage will make it that much harder for many Americans to find jobs. Economic studies have shown that in every case, the minimum wage law gives incentive to firms to hire only the skilled, experienced employees. Firms become less willing to hire the young, the new or unskilled workers or minorities. How this problem has grown, has been described in a most perceptive article by Mr. Peter Jay, one of the chief editorial columnists for the Baltimore Sun, in its September 7 issue. I include it in the RECORD for the benefit of everyone:

A LABOR DAY PUZZLE

This holiday just past has always seemed to have more than its share of frustrating aspects.

Usually, it's hot. Usually the traffic is heavy, the drivers ill-tempered, the highway air poisonous. It is not a long weekend from which travelers return rested and recreated. It has a perverse quality, hard to put one's finger on but quite certainly there, that makes it seem something less than satisfactory as holidays go.

This has something to do with the idea that it signals a return to work. We have come to equate Labor Day with the ringing of the bell at the end of recess. It is the last chapter of summer, the end of the time of the merry shiftless crickets. Ahead lies fall, the season of the industrious and totalitarian ants.

Labor Day begins a new year, in a sense. (A perfectly reasonable sense, one might add. The year might as well start in September as January. It already does for students, and, with Rosh Hashana, for Jews. It starts in February for the Chinese and on July 1 for those who collect and spend our taxes. There isn't anything special about January 1.)

But that is a digression. We were considering Labor Day and its frustrations, many of which are connected with work. It is a time when we find ourselves thinking about labor, whether or not we do any.

A job can be a nuisance or a bore if you have one. It can be something much worse if you don't. DeWayne Wickham wrote movingly in *The Sun* the other day about the difficulties of teenagers, even honor graduates, in finding work of any kind. The problem for black teenagers, as anyone knows who reads unemployment statistics, is especially acute.

But what are we doing about it? Not much that makes sense. And the odd thing is the extent to which there is agreement about that—among Democrats and Republicans, whites and blacks, liberals and conservatives.

Tomorrow, a Senate committee will start writing a new federal minimum-wage law; a minimum-wage bill is also on the fall schedule of the House of Representatives, and there will be action on it soon. It is virtually certain to raise the minimum wage from its current $2.30 an hour to $2.65.

Unions and liberals say that's good but not enough. Business groups and conservatives say it's bad but could be worse. But everyone (including the secretary of labor) agrees that it will eliminate some lower-level jobs—exactly the sort of jobs that unskilled teenagers might fill, and thereby get a foothold on the employment ladder.

It's clear enough why this happens. Let's say Pop's Corner Garage, with its budget precariously in balance, has hired Tom Teen at the minimum wage, full time, to pump gas and go for coffee. Tom gets $18.40 for an eight-hour day, $92 a week. (He lives at home, and even after withholding he can save a little of that.)

Now comes the increase in the minimum wage, to $2.65. That means Pop will have to pay Tom $21.20 a day—an increase of $2.80 a day, or $14 a week. That may not seem like much to a congressman, who gets over $1,000 a week whether or not he shows up at work, but Pop can't afford it; he only hired Tom in the first place because he liked him and appreciated his desire to learn something about running a garage. So he tells Tom just to come in four days a week. Tom's pay, before deductions, drops to $84.80, thanks to the higher minimum wage.

The same thing happens on a large scale at Amalgamated Monolith, Inc., except that bottom-level employees there are laid off entirely. The company buys more automated equipment, pays the people who operate it higher wages, and keeps within its budget. And the distance between those who have work and those who don't grows greater.

There is a lot of well-meaning talk about how the minimum wage oughtn't to be below the poverty level. ($2.30 an hour is $4,787 a year.) The poverty level is arbitrary, of course, but call it half the median income, which is where a lot of reformers place it. The median household income in the U.S. is about $12,500. That would make the poverty level $6,250. That, in turn, works out to almost exactly $3 an hour, which is what George Meany says the minimum wage should be.

This all forgets, though, that minimum-wage employees are not, as a rule, heads of families. And it forgets the impact on the job-seeking teenager. A $3 minimum wage may show compassion on the part of Congress and Mr. Meany for the working man, but it won't help Tom Teen down at Pop's. He'll just find himself working a 30-hour week, if he's lucky, and out of work if he's not.

That, in any event, was what one laboring creature, the head of a household and holder of a union card, found himself puzzling over during the Labor Day doldrums. Some things don't add up, and the minimum wage concept is one of them.

DISTINGUISHED WISCONSINITE PASSES AWAY

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. ZABLOCKI. Mr. Speaker, recently a distinguished community leader in my district, Vincent R. Shiely, passed away after an extended illness. At the time of his death he was president and chairman of the board of Briggs & Stratton Corp. of Milwaukee, Wis., the world's largest manufacturer of small gasoline engines. In 1959, he joined this progressive company as vice president and was elected to the board of directors in 1962. Shiely was a graduate of the University of Notre Dame and received a graduate degree from Harvard Business School.

While he had a successful and distinguished business career, I believe that the great services he performed in the community will be his outstanding remembrance. His association with the Wauwatosa Police and Fire Commission influenced his interest in the welfare of policemen and firemen. He was president of the Blue Coats Foundation, an organization that cares for widows and orphans of police officers killed while on duty. He was director of the Better Business Bureau of Greater Milwaukee; the Metropolitan Milwaukee Association of Commerce; a trustee of Marquette University; a board member and chairman of the lay committee of the Archdiocese of Milwaukee; and a member of the Greater Milwaukee Committee.

Vincent Shiely leaves such wonderful memories with his friends and acquaintances that I would like to insert an article from the Milwaukee Sentinel reporting his demise and his achievements in life.

To his wife Mary and the family I join with his many friends, associates and acquaintances in extending sincere condolences.

V. R. SHIELY DIES AT 56; BRIGGS & STRATTON CHIEF

Vincent R. Shiely, holder of the top three positions at the Briggs & Stratton Corp., died Monday at St. Joseph's Hospital of a malignant brain tumor.

Shiely, 56, chairman of the board, president and chief executive officer of the firm, underwent an operation for the removal of the tumor May 20.

He was released from the hospital in June but was hospitalized again last week. He would have been 57 Thursday.

JOINED IN 1959

Shiely, of 630 Honey Creek Pkwy., Wauwatosa, joined Briggs & Stratton as a vice president in 1959.

His career there was studded with promotions that saw him become a director in 1962, executive vice president in 1963, president in 1970, chief executive officer in 1972 and chairman of the board in July, 1976, when the firm employed as many as 9,000 persons in the Milwaukee area.

The firm is in the world's largest producer of single cylinder, air cooled, four cycle gasoline engines and automotive locks. In speeches, Shiely said his firm rose to the top because of its innovative product designs, cost reductions and service departments in 2,500 outlets worldwide.

BANKED ON QUALITY

Shiely, in a 1975 speech, criticized a magazine article that said his firm was "hiding its light under a basket." He said he preferred to let the quality of the firm's merchandise speak for itself.

The company and Shiely were forecasting a shortage of natural gas as early as 1973. They complained that there might not be enough energy to support the firm's growth, but their predictions also gave themselves enough time to provide for alternate fuel sources.

Shiely said he believed many firms soon would rely more heavily on electricity as a

power source, warning that Wisconsin could face an electricity shortage by 1982.

While the firm faced a financial slump and had major layoffs in 1975 due to a low demand for small engines, Shiely, who had always had his eye on future energy needs, predicted that the slump would pass soon.

At a time when many large firms have almost choked themselves with debts, Briggs & Stratton's books have remained in the black since it was listed on the New York Stock Exchange in 1929.

"He had vision and an overall view," said Frederick P. Stratton Jr., who took over the duties of president and chief executive officer while Shiely was ill.

"That's the kind of view you have to have and he certainly did," Stratton continued. "He had the ability to organize and build an organization.

"He was a very talented guy. He had an amazing memory. He knew the name of every major league baseball player that ever played the game. He knew every old vaudeville routine there was and he could do a lot of them, too," Stratton said.

Shiely was selected the sales and marketing executive of the year for 1973 by the Sales and Marketing Executives of Milwaukee. In 1972, he was given the brotherhood award of the National Conference of Christians and Jews for distinguished service to the Milwaukee area.

SERVED IN COMMUNITY

He also has been a director of the First Wisconsin Corp., Murphy Motor Freight Lines, the Better Business Bureau of Greater Milwaukee, the Metropolitan Milwaukee Association of Commerce; a trustee of Marquette University; a board member and chairman of the lay committee of the Archdiocese of Milwaukee, and a member of the board of the Greater Milwaukee Committee.

Survivors include his wife, Mary; two sons, John and Vincent Jr., both at home; four daughters, Mrs. Kenneth (Elizabeth) Petschel of Wauwatosa, Catherine of Wauwatosa, Maura of Steamboat Springs, Colo., and Judith at home; and a brother, Joseph, and two sisters, Mrs. Edward (Mercedes) Murphy and Gertrude Shiely, all of St. Paul, Minn.

CAPITAL GAINS TAX

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. JACOBS. Mr. Speaker, I propose legislation to defer capital gains tax on capital stock investment transfers from one company to another within the energy field.

The proposal emulates existing capital gains deferral when one sells a home and reinvests in another home. This procedure, sometimes called rollover, retains in the new investment the capital basis of the preceding one.

Thus, as in the case of a home, eventual liquidation of investment in energy would mean capital gains tax on any gain over the cost of the original investment.

DEFINITION

An energy company would be a corporation which researches, develops, or produces energy or the means of harnessing energy.

RATIONALE

A capital gains tax on the sale of stock in an energy company is some restraint against that sale. That is just fine if the purpose of the sale is other than reinvestment. But, if the purpose of the sale is to invest in another energy company which might have a better idea or better management, then the capital gains tax is just a fine on energy efficiency. Repeal that fine on reinvestment and literally millions of Americans will be freer to invest in better energy development.

EXAMPLES

1. Person "A" owns an investment in oil company "X" where the management has grown soft, secure in the knowledge that "A" is "locked in" and cannot get out without paying the cost of leaving—a capital gains tax.

The proposed rollover unlocks "A" to transfer the investment to oil company "Y" where the management is efficient.

Result: Everybody but OPEC—and bad mangement—gains.

2. Person "B" owns an investment in oil company "X" and not only takes a dim view of its management, but also believes that, in terms of automobile fuel, amber waves of grain are the wave of the future—20 percent grain alcohol gasoline is already being sold in Nebraska.

The proposed rollover releases captive investor "B" to act on his judgment that the energy field includes the wheat field.

The proposed rollover unlocks "B" to sell his investment in oil company "X" and within 90 days reinvest all the proceeds in what Representative Martha Keys and I call Agrilene.

Result: Everybody—including farmers with surplus grain—except OPEC—and bad management—gains.

You can't tell, if enough energy investors vote with their savings, GM might even begin building wheatmobiles.

The answer, my friend, is growing in the wind.

CONCLUSION

Thoughtful economists theorize that the stock market would produce greater efficiency in a new enterprise if rollover treatment, hence greater mobility, were given to all transfers of investments in business.

What I submit is a modest experiment for that theory in the limited laboratory of our country's energy companies.

Energy gave mobility to America. Now the time has come for America to give mobility to energy investment.

PANAMA CANAL TREATY

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. WHALEN. Mr. Speaker, the debate on the Panama Canal Treaty may well be the most crucial discussion that this Congress will undertake. The issue has received considerable attention in the press and Members just back from home need not be reminded that their constituents will be watching their actions closely. The issue is too momentous for anything other than calm, rational, and judicious debate.

It is in this spirit that I wish to direct my colleagues' attention to three articles that recently appeared in Washington area newspapers. The first, aptly titled "The Treaty Debate: Cutting Through the Rhetoric," was written by our distinguished colleague from Illinois (Mr. SIMON) and appeared in the Washington Post on August 30. It contains a convenient list of answers to most often asked constituent questions.

The second by a former Member, James Symington, is headlined "The Canal: Use, Not Territory, Is the Issue." In it, Mr. Symington discusses some of the history behind the original Panama Canal Treaty, which bears the name of his great-grandfather, Secretary of State John Hay.

The third article, by the noted columnist, William F. Buckley, is entitled "If Panama Were Led by Pericles," I urge my colleagues to take the time to peruse these perspectives on this issue.

[From the Washington Post Aug. 30, 1977]

THE TREATY DEBATE: CUTTING THROUGH THE RHETORIC

(By Paul Simon)

The headline in the Salem (Ill.) Times-Commoner reads: "Poll Indicates Salemites Oppose U.S. Giving Away Panama Canal." The sub-head reads: "Carter to Appeal to People For Giveaway Treaty."

Salem is the county seat of one of the large counties in my district, and if the question is posed in terms of "giveaway" as that newspaper posed it to the people in my district or anywhere else, the results will be the same.

But let me ask the question differently: "Do you believe this nation should follow the advice of U.S. military leaders on the only practical way to keep the canal open, a treaty with Panama?" My guess is that the answer might be different from the people of Salem.

We are not observing a movie with the villains on one side and the heroes on the other. We are making a fundamental decision about the security of the United States, and I hope enough of my colleagues in the Senate and the House—and enough of the people in the nation—will look at the hard facts, and make a decision based on them.

Here are a few questions and answers that I hope will be helpful.

What is our main interest in Panama?

It is to keep the canal open. While the canal cannot take the largest ships, it continues to be important to the United States and other nations.

Don't we have a treaty that gives us the right to stay there?

Yes, there is a treaty, but it is not one we can be proud of. As conservative columnist James J. Kilpatrick wrote the other day, it "is a matter of national shame." Panama was created as a nation (formerly part of Colombia) through a revolution with our indirect help. Fifteen days after the revolution, a French citizen seeking personal enrichment signed a treaty for Panama with the United States that gave us the Canal Zone. As a form of apology, a few years later the United States paid Colombia $25 million as a gesture of goodwill.

Interestingly, "The Great Commoner," William Jennings Bryan, who was born in Salem, Ill., and for whom the newspaper there is named, called our seizure of property in Panama "immoral." While creation of the canal was a great feat, the treaty itself is not one we can be proud of.

But even if the treaty were valid, that was more than 70 years ago, and we have to recognize that colonialism is now dead. We cannot take a strip of land through the middle of another country and expect that country to like it.

What do our top military leaders believe?

The new treaty is supported not only by the Joint Chiefs of Staff, but also both publicly and privately by all the top U.S. military people in Panama. I went there about 1½ years ago and met with Lt. Gen. McNair and all the top Army, Navy and Air Force people. I spent enough time with them to get their candid views. They feel that for us to fail to work out a treaty would invite the closing of the canal.

How many nations favor the United States' keeping the canal?

None.

The shippers have the most at stake economically. What do they favor?

The organization that represents the largest number of shippers favors a treaty. They recognize that without a treaty there may be no canal.

Doesn't Panama have a military dictatorship?

Yes it does, unfortunately. We have to deal with the facts as they are, not as we would like them to be. But it has been a stable regime. They have had fewer changes of leadership in recent years than we have.

Is there a danger that we would play into the hands of the Communists by having a treaty?

One of the persons I visited in Panama was the top Roman Catholic churchman, Archbishop Marcos McGrath. He said that nothing could play into the hands of the Communists and other extremists more than our failure to have a treaty. It is worth noting that in Panama the Communist elements now oppose the treaty. It is an interesting partnership. It is also interesting to note that the Republic of Panama does not recognize either the Soviet Union or Mainland China, and judging by that flimsy standard we are more of a "Communist" nation than it is.

Why would the canal be in danger if a treaty is not agreed to?

Earth slides now close the canal occasionally. More than 75 percent of the 13,000 people who work on the canal are Panamanians. Any one of them with a hand grenade can close the canal. The territory is tropical with terrain like Vietnam. If Monday-morning quarterbacks here believe we can keep the canal open despite the feelings of the people of Panama, they are living in a dream world. We could try, but it would mean the blood of Americans—including those from Southern Illinois—and Panamanians spilled needlessly. And the chance of success would be slim.

Why supports a treaty?

Among the supporters of a treaty are not only President Carter and former President Ford, but conservatives like Sen. Barry Goldwater (R-Ariz.) and columnist William Buckley and liberals like Sen. Hubert Humphrey (D-Minn.). There are, however, many who conscientiously oppose the treaty, and the vote in Congress probably will be close.

One final word.

Whether we like it or not, the United States is the leader of the Free World. If we take a position of refusing to give back their own land to the people of Panama by the year 2000, our effectiveness in leading the world will be hampered.

From any logical viewpoint, we should move ahead as our nation's leaders ask. But emotions are strong on this, and we will know in about six months whether the sensible answer emerges.

[From the Washington Post, Sept. 2, 1977]

THE CANAL: USE, NOT TERRITORY, IS THE ISSUE

(By James Symington)

Opponents of the new treaty with Panama have one very considerable advantage. They can win standing ovations. The best its supporters can expect to achieve is adequate reflection. It is easier to bring a crowd to its feet than to its senses.

A recurring theme of the opposition to the new treaty is that it is simply a device to advance the domestic position of the current Panamanian regime. This may well be one momentary effect of ratification, but it is most emphatically not the cause of the pressure for a new treaty. For Panamanians this is a popular cause that requires no self-seeking administration to keep it alive. It is a cause rooted in the circumstances surrounding the signing of the original treaty. That treaty was signed "for" Panama, but *against* the wishes and expectations of her true leaders of the time, by the Frenchman Phillippe Buneau-Varilla, that magnificent promoter, who exploited a nebulous commission to negotiate its terms with Secretary of State John Hay. Buneau-Varilla spent the remainder of his days in France, not in Panama.

In 1964 I met his grandson Phillippe, who was visiting in Washington. Since Secretary Hay was my great-grandfather, I suggested to Phillippe that we make a sentimental journey to Panama to see what our ancestors had wrought. "You could go," he laughed. "Me they would shoot."

Indeed, in a hurried effort to assume direct control of the negotiations, a Panamanian delegation made its way to Washington only to find on arrival that the treaty had just been signed. For a time that delegation insisted that Buneau-Varilla had exceeded his authority to act for Panama. But the resourceful Frenchman cabled the foreign minister of the fledging republic that Panama's failure to ratify would result in the suspension of America's intercession on behalf of her newly won independence from Colombia, and the likely conclusion of a canal agreement with the Bogota government. History provides few examples of formalities concluded by a newborn republic under greater duress.

Had France attempted to exact such a territorial concession from the Continental Congress on pain of removing her fleet, army and financial aid to the colonies, what would our answer have been? And had we acquiesced, how long into our nationhood would we have permitted the situation to endure? What steps would we have taken to correct it? Would they have been confined to the juridicial and diplomatic? These questions answer themselves. We would have marched, if necessary, into the disputed territory and defended the action before the world as just and proper in the light of circumstances. Perhaps we could have bought it back in the Louisiana Purchase or another transaction. The point is that our options would have been open—money or force.

Panama has never had much of either. And the difference, it may be noted, is not in principle, but in power. So a succession of Panamanian governments has asked ours to conclude a new treaty more consonant with their national dignity.

Fifteen years ago, I met with Panamanian students in Panama and later in the Alliance for Progress Charter conference in Uruguay. They asked if there might not some day be a disposition on the part of our government to return the trappings, at least, of sovereignty over the Canal Zone to Panama. They were not belligerent, but wistful. Young Central Americans, as it were, for freedom, they pointed out that the Colombian Senate had rejected a treaty that was far less onerous than the one we wrung from Panama, whose anxious government had no recourse but to placate the sentry standing watch over the birth of their nation.

Generations of young Panamanians have been preoccupied with the same concern. They need no dictators to whet their yearning. It began long before the incumbent regime took office and would continue long after its passing. Nor will the Torrijos administration, or its successors for a generation, enjoy the full benefits of the renegotiation. Those years can and should be great years of change and opportunity—change in the technology of ocean-going transport and canal construction, and an opportunity to prepare and conclude arrangements with Panama and other nations that meet the future in peace and mutual cooperation. Such arrangements would include proper provision for the rights of U.S. citizens in the Zone.

Much opportunity stands to be lost by failure to ratify. In our unfolding confrontations with other world powers, we will very much need the firm friendship and support of our sister republics in this hemisphere. Our relationships with each of them will be profoundly affected by this decision—this evidence of our willingness and our ability to make a concession that no force but the forces of conscience and reason could evoke.

Hear the words of Hay in a letter urging a senator not to slow the proceedings leading to ratification of the old treaty. The treaty, he wrote, was "very satisfactory, vastly advantageous to the United States, and we much confess, with what face we can muster, not so advantageous to Panama. . . . You and I know too well how many points there are in this treaty to which a Panamanian patriot could object."

Hay's words were prophetic. Panama's patriots did object then. They object now. If we persist in confining the expression of their objection to extra-legal activities, we can pride ourselves on a stern adherence to international law. We might even be able to prevent such activity from jeopardizing our use of the canal, albeit with some anxious moments, and at a certain cost that could make us nostalgic for the negotiated annual payments. But if our forces should prove unequal to the task of maintaining the serene use of that 50-mile waterway through a hostile land, we may lose the thing we most desire. For it is not the territory but the use that matters to us, a use that the new agreement guarantees, to the extent words on paper can guarantee anything, as effectively as the old.

Of course, there are no absolute or permanent guarantees in the uncertain course of international events, changing conditions and emerging ambitions. And history adamantly refuses to reveal its alternatives. So a nation, like an individual, must rely on its intuition and best judgment. The judgment of two Presidents, heading opposite parties, but our one nation, is that we are more likely to enjoy the secure and peaceful passage through the canal over its useful life through a prudent and generous spirit than a tenacious insistence on provisions we dictated to an infant republic. They ask for our support. They will have it, I believe, if we take to heart the lesson of a great Latin American, the immortal Benito Juárez of Mexico. "Respect for the rights of others," he wrote, "is peace."

[From the Washington Star, Sept. 8, 1977]

IF PANAMA WERE LED BY PERICLES

(By William F. Buckley, Jr.)

Seven leaders of Young Americans for Freedom, questioned on the opposition of their organization to the new Panama Canal treaty, seemed to agree on one point which, I think, will prove critical in the discussions ahead. They were asked: "If the revised treaty had resulted from an American initiative rather than a Panamanian initiative, would you alter your position on it?" Most seemed to agree they would. That is to say, that other considerations were relatively insignificant by comparison. What matters most is the symbolic act: We are being pushed around.

General Omar Torrijos figures prominently in this act of international theater. He is out of Central Casting as the Guy We Would Least Like to Do a Favor For. He is an unsmiling left-wing tyrant who has expressed admiration for such characters as Fidel

Castro and the mad Qaddafi of Libya. He is a specialist, at home, in obliterating the opposition, whom he dispatches by the neat expedient of taking their property and booting them out of the country.

If the leader of Panama were the man who serves as its President, Demetrio Lakas, rather than Torrijos the Caudillo, the situation would very likely change substantially. President Lakas was educated in Texas, speaks as idiomatically as Lyndon Johnson and almost as colorfully, and brims over with pro-Americanism and a deep distrust for Communism. Ask not why therefore he associates himself with Torrijos. That is the way in Spanish politics, and the way, if less so, in non-Spanish politics—not everybody associated with Hitler was evil.

But here is a point that ought to be considered. The protests against American occupation of the Canal Zone antedated the ascendancy of Torrijos. It is certainly true that Torrijos has continually identified himself with the anti-Canal rioting. It is not true that he instigated that rioting (in 1964 he was an insignificant military officer). Nor is it true that his own tyrannical habits and his own ideological predilections have anything to do with the feeling of the Panamanian people toward the Canal Zone. If Panama were led by Pericles, the popular fever about the Canal Zone would be unchanged; and why not?

Within a country, there are grounds for being especially strict in discouraging civil disobedience. As between countries, particularly where there is a volatile tradition, it doesn't always go that way, and we are no exception. When we felt ourselves maltreated by the British, we engaged in acts of sedition against the crown at least the equivalent of the riots engaged in by the Panamanians. American non-jingoists (and that ought to embrace all American conservatives) are required to ask themselves the question: How would we, if we were Panamanians, express ourselves in the matter of the Canal?

Now, Panamanian resentment of U.S. occupation of the Canal Zone is no more an argument for U.S. evacuation, than Cuban resentment of occupation of Guantanamo is an automatic argument for U.S. evacuation. What it is is a single factor. But it is no less a factor because that indignation brought on discussions between representatives of Panama and representatives of the United States: Yet it is this point that, above all others, Governor Ronald Reagan continues to stress.

The United States presumption should always be that we do not want to remain where we are not wanted, but will do so if considerations of national security require it. And considerations of national security not only do not require our presence in the Panama Canal under the present arrangements, they argue against our presence in the Panama Canal under the present arrangements.

The reason for that, tirelessly put forward, is that the Canal is at the margin indefensible. But the chances of defending it against sabotage are greatly increased with the cooperation of Panamanians.

We should, then, be as angry at the Panamanians who assaulted the Zone in 1964 as we are at our forefathers for harassing the British in Boston 200 years ago. There is no reason to deny others those urges we feel so strongly in ourselves. Ours must be the cool, deciding voice. But it must not be governed by petulant considerations.

A POSITIVE APPROACH FOR BUSINESS IN ENDING MANDATORY RETIREMENT

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. FINDLEY. Mr. Speaker, it is always heartening when members of the business community of this Nation and those professionals who serve them take a forward looking approach to ending mandatory retirement. A recent article in the Harvard Business Review, by University of Houston Prof. Betsy D. Gelb, advises businessmen on how to benefit from legislation that would raise the age of mandatory retirement. The article shows that with a little thought and effort a better system can evolve when American employers no longer use the lazy man's personnel policy of mandatory retirement.

Text of the article follows:

WHEN COMPULSORY RETIREMENT AT 65 IS ENDED

Sometime in the future, when Congress or the Supreme Court bans forced retirement at the age of 65, it should be no surprise. Movements on two fronts have made the overturn of this policy likely, if not inevitable.

The first front is legislative. Bills to outlaw mandatory retirement have been introduced in Congress and in three state legislatures; in all these bodies the measures have gained wide support. A former director of the Social Security Administration, Robert M. Ball, has advocated three years' postponement, by law, of the age for receiving benefits; he and others maintain that change is necessary because pensions simply cost too much. Former Treasury Secretary William E. Simon has called for raising the retirement age to avoid bankruptcy of the Social Security system.

The second front is legal. One lawsuit to overturn an age-specific retirement policy won support from the American Medical Association, which stated in its "friend of the court" brief that no evidence shows older workers to be less efficient than younger ones.

A 1974 Supreme Court decision may be a basis for a court challenge of age-specific retirement plans. In ruling that the Cleveland school district could not force a teacher to take maternity leave in a particular month of her pregnancy, the Court held that the policy amounted to "a conclusive presumption of physical incompetency [which] applies even when the medical evidence as to the individual woman's physical status might be wholly to the contrary."

If a worker is entitled to scrutiny of her capabilities before she is obliged to take maternity leave, the retirement policy implications are not hard to imagine. Arthur S. Flemming, U.S. Commissioner on Aging, asserts that a forced retirement at a set age stands "in direct conflict with our Judeo-Christian concept of the dignity and worth of each human being."

The chief justifications for obligatory retirement at a certain age are the terrible difficulty of deciding whom to retain and whom to let go, and the need to make room for younger employees. Yet it is by no means unknown for companies to overcome these arguments; few of the employees of U.S. Steel, for instance, are subject to compulsory retirement rules. Most of the employees may continue working as long as they can pass annual medical examination adjusted to the demand of their jobs.

Managers who want to prepare for a decision that appears likely, if not inevitable, face two allied questions: What would a change mean to my organization? What steps should we be taking now?

SOME CONSEQUENCES

Although the retirement age may simply be moved back, a more likely possibility is prohibition of age as a legal basis to retire someone, fail to hire, or discriminate in leave, compensation, or promotions.

How, then, will it be possible to retire an employee? In the overwhelming majority of situations, it will be possible because he or she wants to retire. Where the organization's action is challenged, it will probably be obliged to demonstrate that a worker, or all workers of a certain age, can no longer perform their duties adequately. In the laws now protecting workers between 40 and 65, discrimination is permitted only if age is a bona fide job qualification necessary to normal operation of the particular business.

Most organizations will choose to make retirement desirable. A generous and flexible pension plan sets a low "price" on giving up a salary. But price is only one consideration for the person in his or her 60s "buying" retirement. Others are:

The quality of the product—in other words, will I enjoy retirement? Influencing the answer to that question are tangibles like company sponsorship of retirement clubs with stimulating activities and intangibles like the status accorded retirees who return for visits.

The desire to discover what it's like before plunging in. The Swedish government offers workers the opportunity of tapering off work gradually between the ages of 60 and 70. Business in the United States might well initiate this policy on its own. Many women with young children want part-time school-hour jobs. A possible procedure is to employ one of them in the mornings and someone approaching retirement in the same job after noon.

When retirement is "marketed" in this way the competition is the job—its status, salary, and the feeling of usefulness it provides. When that combination of benefits outweighs the benefits of retirement in the worker's mind, that worker will retire only if the organization can force him or her to do so.

Such situations will require the organization to demonstrate that this individual or a certain age group cannot perform the duties of the job. When the required capabilities are unclear, management obviously must find out.

Once the organization has established good measures of the capabilities needed for its various jobs however, it should be able to retire some workers *earlier*. No longer must it retain employees who have lost their productivity and drive in their late 50s or early 60s, but who are kept on because today's special pressures and union contracts make it difficult to force them out.

Moreover, management may discover that in fact most of its workers in their 60s have the necessary capabilities and should stay. The result may be a significant saving in recruiting and training costs and, if the average worker continues to work until age 70 or later, a decrease in contributions to the pension fund.

FIRST STEPS

While contemplating the possible overturn of retire-at-65 policies, the organization may consider measures that can be implemented immediately. Those I am suggesting, it

should be noted, are useful even if present policies are upheld. Suggested actions are:

Look at the retirement "product" offered to workers in your organization and see how likely you would be to "buy" if you didn't have to. Then improve it. Consider part-time jobs for retired workers. Discounts on company products are another possibility, obviously more relevant for major household appliances than for, say, shoelaces.

If the organization has no retiree-relations staff, you may want one. But its performance should be measured on dimensions that matter: how many prospective employees mention that a retiree recommended your company, or how many retirees support, not oppose, a company request for a zoning variance. (Retirees have the time to go to public hearings and to back the organization they worked for—or picket it.)

Consider the merits of a gradual retirement plan: easing the shock of retirement and the chance it offers to obtain the "best four hours," perhaps, of a worker's day, whether the worker is 60 or 68.

Develop a group that builds expertise on the subject, including industrial engineers, doctors, psychologists, supervisors, union representatives, and some recently retired workers. You may have to prove in court what capabilities are required for every job in your organization. Even if such a challenge never comes, you will still benefit if capable employees can be retained beyond 65.

SOCIETAL CHANGES

Not only the organization, but the entire society in which retire-at-65 is no longer the rule will be radically changed. A few examples may indicate the range of effects:

People over 65 will have more money, whether they stay on the job or because pension plans are "sweetened" to lure them into retirement. They will become a more desirable market; the industries most likely to benefit include travel and home-maintenance services like contract lawn fertilizing and house painting.

The creation of a significantly higher proportion of part-time jobs as more employees ease into retirement will greatly spread commuting and other activities over a greater part of the day.

Retirement communities will be forced to compete with the attractions of staying on the job. Possibly many of them will choose to join the trend, rather than fight it, and locate within commuting distance of major metropolitan areas.

Obviously, the design and funding of pension plans will be not just a new ball game but a sport with a new set of rules. What will the flexible program of the future look like? It's impossible to say, but the last person who should even consider retiring at 65 these days is an actuary.

TESTIMONY BEFORE INTERNATIONAL TRADE COMMISSION ON SPECIALTY STEEL IMPORTS

HON. WILLIAM F. WALSH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. WALSH. Mr. Speaker, I would like to share with my colleagues testimony I delivered this week before the International Trade Commission during a hearing on whether the current import quotas on specialty steel should be maintained for 2 more years or not.

Following are the reasons I gave for why the quotas should remain in effect:

TESTIMONY OF REPRESENTATIVE WILLIAM F. WALSH

Gentlemen, I am William F. Walsh. I represent the 33rd Congressional District of New York in the United States Congress, and I am here today to testify in favor of the retention of existing import quotas on specialty steels.

I have a special interest in this issue. My district includes the Crucible Specialty Metals plant in Syracuse. This facility has been one of those hard-hit by the strong import pressure that has plagued the nation's specialty steel producers. On January 16, 1976, some 1,300 persons at this plant were certified to receive trade adjustment assistance as a result of import pressure.

It is because of those workers that I am here today. And I think that it might be best for me to let one of those workers speak about his personal concerns through me.

I have here a letter to me from Anthony M. Pascarella, president of United Steelworkers Local 1277—the local whose members work at the Syracuse plant. I quote:

"As a steelworker, and president of Local 1277 of the United Steelworkers of America, I am deeply concerned over the government's consideration of loosening or removing present import restrictions on foreign specialty steels.

"As you know, the steelworkers and their union fought long and hard in conjunction with industry leaders to get import restrictions imposed. I am sure you are well aware of the fact that when import restrictions were imposed, steel importers filled their warehouses in anticipation of the government's action. Therefore, the present restrictions have not been in effect long enough to determine their impact on the steel industry or on our foreign competitors.

"My concern, however, is not basically business or industry oriented, but lies primarily with the welfare of the people I represent—the steelworkers. To us, import restrictions mean jobs and job security. The steel industry has not yet recovered from its business slump, nor returned to employment levels prevalent in 1974 and early 1975. In fact, the entire industry is still in a state of depression. It has been our hope that import quotas should be imposed long enough for concrete import agreements to be negotiated with foreign countries. This, we feel, would eliminate unfair competition which, in turn, deprives us of employment. When the steel industry suffers, so do the steelworkers. Modifying or removing present import restrictions would cause us to suffer, and not only on a short-term basis, but one with long-term ramifications affecting all of us.

"We work hard to produce a highly technical product where quality is not only desirable, it is imperative. We take a great deal of pride in our workmanship and our productivity. We do not want our jobs given to the employees of our foreign competitors.

"As our representative, and on behalf of all the members of Local Union 1277, I am requesting you to take whatever action is necessary, including direct contact with President Carter, to see to it that the jobs of the American steelworkers are protected."

This letter summarizes far more than I could the anxiety of these proud, talented Americans whose very livelihood and future is threatened by what I feel could be a premature removal of protection needed to allow their industry to recover from previous flooding of U.S. markets by imports.

As I noted, trade adjustment assistance has been granted to 1,300 persons at Mr. Pascarella's plant. Another 2,400 employees at two Allegheny Ludlum plants in Upstate New York also have been granted trade adjustment assistance, and overall, between November, 1975, and March, 1977, more than 23,000 specialty steelworkers were granted trade adjustment assistance. I think these people have a right to protest.

Why are the quotas being reconsidered after being in effect for only one year? A May 24, 1977, Wall Street Journal article reported:

"The presidential action on specialty steel is a direct response to pressure from Western European governments. Early this year, they strongly protested the quotas, which apparently were hurting the European steel industry more than anyone had anticipated."

Gentlemen, in every other country but our own, steel is a direct instrument of national policy. They want to export their potential steel unemployment to the U.S.—at the expense of potential unemployment among American workers—so that our specialty steel companies are competing against foreign governments.

A closer look at the international trade environment in specialty steel shows we are dealing with technically-oriented companies. They produce complex and "exotic metal" steel alloys which are made into key components used in the energy, chemical, automobile and the aerospace industries. They also have critical defense applications.

American specialty steelmakers are the acknowledged technological leaders—in the development of new production processes as well as in the development of new products. This fact was acknowledged by foreign representatives who testified at the first ITC hearings.

Our specialty steel industry also produces a profit domestically, but nearly every major foreign specialty steel producer in the world lost money last year—and is continuing to lose this year. British Steel Corporation, owned by the government, is losing one million dollars a day.

Our specialty steel producers must operate under laws which stimulate competition, but foreign producers do not. The Swedish government is currently promoting a program of "rationalization"—in order to reduce competition. The Japanese openly speak of cartels—and implement them. All of these practices would be illegal under American law.

Despite the current world recession, foreign specialty steel capacity has been expanding—and despite their lack of markets, foreign specialty producers have been holding their production in certain products near the record levels of 1973–74—when there was a world-wide shortage of steel.

Gentlemen, in any area you choose, our specialty steel producers can hold their own against anybody in the world—given equal terms of competition. But the terms of competition are simply not equal.

If we eliminate present specialty steel quotas, we will be subsidizing continued employment abroad at the expense of greater unemployment among our own specialty steel workers.

We will be hurting ourselves by making it impossible for a domestic industry to produce the specialty steels needed for many vital industrial and defense applications—products that foreigners will not produce for us because it is not profitable for them to do so.

We will be destroying an invaluable resource—a labor pool of highly skilled, highly motivated workers who will not be available if and when we ever need them again.

We must retain the current specialty steel quotas for their full three-year term.

We must give our producers a chance to

get on their feet and recover from the depredations of the past.

We must, while quotas exist, take those steps necessary to eliminate the unfair abuses that make quotas necessary.

We must help our American workers keep their jobs.

MIXED EMOTIONS EXHIBITED BY COUGHLIN CONSTITUENTS ON ENERGY OPTIONS

HON. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. COUGHLIN. Mr. Speaker, in disclosing the results of my annual mail questionnaire poll, I think the views of my constituents in Pennsylvania's 13th Congressional District on some of our key energy issues are most revealing.

In short, they have displayed mixed emotions on Government regulation and industry responsibility. The results, compiled from responses before a July 31 deadline, represent their opinions before the House of Representatives passed a so-called energy bill. In many respects, their assessments of how to handle our energy dilemma reflected the conflicting and sometimes contradictory approaches in the House.

As is my custom, I also will share the results of this poll with the President and his staff.

In expressing their views on our energy situation, my constituents soundly rebuffed a gasoline tax as a means of curtailing consumption while a majority approved of a "gas-guzzler" tax.

By a 1-percent plurality, those answering approved of delaying pollution controls as proposed by automakers who feel it is needed to produce more efficient cars and trucks. They, however, by a solid majority want pollution controls delayed to permit utilities to convert to coal more quickly and at less expense.

On one hand, my constituents favor the Congress deregulating natural gas wellhead prices to try to prevent shortages, but feel that major oil companies should not be permitted to provide investment dollars for and control other energy firms.

I asked constituents specifically if they basically believe the energy crisis is a ripoff by oil and gas producers and if Government should become further involved in regulations and producing energy. By 3 percent, a plurality said "yes."

In stimulating the economy, a clear majority opposed additional job creation at this time by the Government through more spending with the resultant increase in the national debt. Of those who answered in the negative, many wrote suggestions in the space provided with the most prevalent comment relating to incentives for businesses, corporate tax reductions, and similar proposals.

Other views included curtailing foreign imports, particularly cars; ending foreign aid, and enacting a wage-price freeze.

The difficult problem of protecting the integrity of the social security fund was mirrored by the fact that one of three persons responding could not decide on replenishing the fund with general revenues from the Treasury or by raising social security taxes. The variety of responses indicated there is much confusion as to how the fund is maintained and for what purposes it is used.

In other questions, a majority of constituents answering felt our present military posture is adequate to meet our needs and present defense spending should be continued.

A split developed on the level of President Carter's "human rights" emphasis on foreign policy. While a plurality feels it poses unacceptable risks and should be modified significantly, this total was only 3 percent more than those who believe it is essentially correct and should be pursued vigorously.

A clear majority favors continuing the United States military and naval presence in strategic areas of the world such as Europe, South Korea, and the Middle East.

On the issue of tax credits for education, my constituents view aid to parents for costs of college, university, and technical school tuition differently from aid to nonpublic and parochial elementary and secondary school tuition. Seven out of 10 favor the higher education aid while a slim plurality oppose the nonpublic school aid.

The problem of congressional credibility clearly is seen by the fact that only one out of three persons felt that U.S. Representatives and U.S. Senators should be paid as much as Federal judges and executive branch employees such as the White House press secretary. Forty-three percent said they should not be paid as much.

These questionnaires, as has been my yearly practice, were mailed to every household, apartment, and boxholder in the congressional district to assure as wide a participation as possible. I also will continue my custom of mailing copies of the results to constituents.

In tabulating the responses, my staff weighted the returned questionnaires by ZIP code. This helped insure the accuracy of answers by not giving undue influence to any particular community or area. The procedure showed virtually no difference in the sentiments of constituents in the Montgomery County and Philadelphia portions of the district.

More than 12,500 individual responses were received before the deadline, an increase of some 2,000 over last year. Thousands of other responses were received after the deadline, but could not be included in the tabulation:

QUESTIONNAIRE RESULTS

1. To stimulate the economy, do you believe additional jobs should be created at this time through more government spending with a resultant increase in the national deficit?

[*In percent*]

Yes	22
No	72
Undecided	6

2. If your answer to Question 1 is "no", please explain briefly how we should create more jobs?

(Space provided for additional comments.)

3. Both President Ford and President Carter have cited the urgency of the energy crisis and proposed a number of significant changes.

A. Should Congress enact President Carter's proposed escalating gasoline tax in an effort to curtail consumption?

[*In percent*]

Yes	28
No	67
Undecided	5

B. Should Congress enact a "gas guzzler" tax on purchases of cars with low gasoline mileage and provide rebates on cars with high mileage?

[*In percent*]

Yes	53
No	43
Undecided	4

C. Should we delay pollution controls as proposed by auto makers who claim it is necessary to produce more fuel efficient cars and trucks?

[*In percent*]

Yes	47
No	46
Undecided	7

D. Should we delay pollution controls to allow utilities to convert from oil and gas to coal more quickly and at less expense?

[*In percent*]

Yes	64
No	30
Undecided	6

E. Granted there would be some increase in consumer costs, should Congress deregulate natural gas wellhead prices to try to prevent shortages?

[*In percent*]

Yes	56
No	33
Undecided	11

F. Should we allow major oil companies to provide investment dollars for and control other energy firms such as coal and nuclear?

[*In percent*]

Yes	34
No	57
Undecided	9

G. Do you believe the energy crisis is basically a rip-off by oil and gas producers and that the government should become further involved in regulating and producing energy?

[*In percent*]

Yes	42
No	49
Undecided	9

4. The Social Security System is now an insurance program into which employers and employees in their working years pay money to provide benefits later on retirement. Because of the number of elderly and the amount of benefits, the Social Security Fund is low. Should the Fund be replenished: (one only)

[*In percent*]

From Treasury's general revenues, thus making Social Security a welfare-type program	23
By increasing Social Security taxes, thus continuing the program on an insurance basis	41
Neither (specify)	36

5. With publication of conflicting reports on Soviet military strength, which best reflects your opinion of the United States' present military posture? (one only)

[*In percent*]

More than adequate to meet our needs—cut defense spending	20
Inadequate to meet our needs—increase defense spending	24

Adequate to meet our needs—maintain present defense spending ---------- 56

6. Do you think that the level of President Carter's "human rights" emphasis on foreign policy is: (one only)

[*In percent*]

Essentially correct and should be pursued vigorously	40
Posing unacceptable risks and should be modified significantly	43
Undecided	17

7. Should the United States phase out its military and naval presence in strategic areas of the world such as Europe, South Korea and the Middle East?

[*In percent*]

Yes	25
No	64
Undecided	11

8. The House of Representatives consistently has refused to permit a vote on my legislation to provide tax credits for education.

A. Do you favor legislation to grant tax credits or deductions to parents for costs of non-public and parochial elementary and secondary school tuition?

[*In percent*]

Yes	47
No	49
Undecided	4

B. Do you favor legislation to grant tax credits or deductions to parents for costs of college, university and technical school tuition?

[*In percent*]

Yes	70
No	26
Undecided	4

9. Should U.S. Representatives and U.S. Senators be paid as much as Federal judges and Executive Branch employees such as the White House press secretary?

[*In percent*]

Yes	33
No	43
Undecided	24

[*In percent*]

Party preference of those responding:	
Republican	63
Democrat	21
Non-partisan	14
Other	2

[*In percent*]

Ages of those responding:	
18 to 21	1
21 to 35	21
35 to 50	25
50 to 65	34
65 and over	19

AGE DISCRIMINATION IN EMPLOYMENT ACT AMENDMENTS

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. HAWKINS. Mr. Speaker, later this month the House of Representatives will consider H.R. 5383, the Age Discrimination in Employment Act Amendments of 1977. The major provisions of the legislation include extension of the upper age limit of protection for non-Federal employees from age 65 to age 70; abolition of the upper age limit for Federal employees and clarification of the exemption for bona fide retirement and pension plans under current law to prohibit involuntary retirement at an age less than the protected age under the act.

Over the course of the past few years the courts have been divided on the interpretation of the legislative history associated with the bona fide retirement exception. The controversy centers around section 4(f)(2) of the ADEA which permits an exception by making lawful "to observe the terms of a bona fide seniority system or any bona fide employee benefit plan . . . which is not a subterfuge to evade the purpose of this act." The legislative history shows that the purpose of this exception was to encourage the hiring of older workers by permitting their employment without necessarily providing them with exactly the same pension, retirement, or insurance benefits which are afforded to younger workers. During the Senate debate, Senator YARBOROUGH, the manager of the bill, stated, "This will not deny an individual employment or prospective employment but will limit his rights to obtain full consideration of the pension, retirement or insurance plan."

Later this fall the Supreme Court will hear the McMann against United Airlines case which deals with the question of involuntary retirement prior to the age 65 under a bona fide retirement plan. Recently, the New York Times carried an article describing the circumstances surrounding McMann's suit. The article follows:

[From the New York Times, Aug. 30, 1977]

FOUR YEARS AFTER AIRLINE EMPLOYEE WAS FORCED TO RETIRE, HIS PROTEST GOES BEFORE SUPREME COURT

WASHINGTON, August 29.—It didn't seem right to Harris McMann when United Airlines, his employer for nearly three decades, insisted in 1973 that he retire.

His health was good. He enjoyed his job. He saw no reason for suddenly ending his working years. No reason except his age, 60.

Four years later, the former pilot's legal protests against what he views as simple age discrimination are at the center of a Supreme Court battle.

The nine justices will decide this winter or next spring whether Mr. McMann's rights were violated when he was forced to retire. The case may affect more than 11 million Americans who the Labor Department says are members of pension plans that require retirement before age 65.

"I've been accused of being stubborn," Mr. McMann conceded with a grin in an interview at his comfortable home in Fairfax, Va., a Washington suburb. "And I guess I am."

He said he began working for United in Chicago as a copilot in 1944 at the age of 31 and held various jobs with the company over the years, finally taking on a management post. In 1964, after previously declining to join an employee pension plan, he began thinking more about future security and signed up.

The card he signed noted that the "normal retirement age" for employees in his classification was 60. But Mr. McMann said the realization of what that meant did not hit him until about a year before his 60th birthday.

"I was enjoying good health," he said. "I was enjoying my work and wanted to continue on. I didn't really have anything particular to do."

REMEMBERS HIS FATHER'S EXPERIENCE

One thing that prodded him to fight forced retirement was the experience of his father, a banker who was required to step down at age 70.

He had been active in his work, having "contacts with people, going places and making decisions," Mr. McMann said. "Then all of a sudden this terminated and he didn't know what to do with himself.

"He wasn't a man who had a lot of hobbies. His employment was his hobby. It got to the point where he didn't have the motivation to be active. He ended up sitting at the dining room table with his head in his hands and just deteriorated."

That experience reflects findings of an American Medical Association committee report, cited in Mr. McMann's Supreme Court case. It said the mental and physical health of many people was seriously hurt by the "loss of status, lack of meaningful activity, fear of becoming dependent and isolation" that may accompany involuntary retirement. And it noted that suicides reach a peak in upper age brackets, 70 years and over, after retirement normally occurs.

Francis McBride, a 26-year-old graduate of the University of Virginia law school, became Mr. McMann's lawyer.

After exchanging letters with a company official, who ruled out an exception for Mr. McMann, the young lawyer instituted grievance proceedings. They lost, but the arbitrator, Archibald Cox, the former Watergate special prosecutor, noted that redress might be sought under the Age Discrimination in Employment Act of 1967.

The law prohibits age discrimination in hiring and dismissal of employees 40 to 65. But it also says: "It shall not be unlawful for an employer to observe the terms of any bona fide employee benefit plan such as a retirement, pension or insurance plan, which is not a subterfuge to evade the purposes of this act."

Mr. McMann filed suit in Federal District Court in Alexandria, Va., on Jan. 31, 1975, Judge Albert Bryan Jr. dismissed it after United argued that Mr. McMann was retired under a bona fide employee benefit plan of the type exempted in the law.

He went next to the United States Court of Appeals for the Fourth Circuit in Richmond, where the Labor Department filed a "friend of the court" brief supporting him. A three-judge court ruled in his favor Oct. 1, 1976, saving any pension plan that contains a provision for mandatory retirement before age 65 must be presumed "a subterfuge to evade the purposes of the act.

COURT RULED PLAN A SUBTERFUGE

But United announced its intention to appeal to the Supreme Court, and on Feb. 22 the justices agreed to review the case in the term beginning this fall.

Mr. McMann is spending the summer waiting, doing some "freelance" flight instruction and taking care of personal affairs.

He may turn 65, and be beyond the scope of the Age Discrimination Act, by the time the justices rule on his case. This means he could no longer hope to win reinstatement to his job, but he might receive instead a substantial amount of back pay to make up for lawyer's fees and the time and energy he has put into his personal "gamble" in court.

"To me, I look at it and say this is illogical, this is an injustice, this is social policy that should be done away with," he said. "This is the only way available for me to change it."

He noted that legislation was pending in Congress to give the Age Discrimination Act broader impact.

Even if he should lose in the Supreme Court, he said, he feels sure that the law and changing times will end involuntary retirement.

"I believe the time has come that people are beginning to realize that this is a form of discrimination."

AMERICOLOGY, MILWAUKEE'S PLAN FOR RESOURCE RECOVERY

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. REUSS. Mr. Speaker, during the August district work period, I had the opportunity to tour the city of Milwaukee's new resource recovery facility, Americology.

The facility is the result of an agreement signed on January 16, 1975, between the city of Milwaukee and the American Can Co., under which the company would design, construct, finance, and operate a 1,500-ton-per-day recovery facility which would process all of the city's and its surrounding area's solid waste.

The plant began operations in January of this year, and it is now processing over 60 percent of Milwaukee's waste. Presently, the facility is recycling waste into reusable ferrous and nonferrous metals, glass, and energy. In fact, Americology produces six units of energy for every unit of energy it consumes.

The plant uses a variety of equipment to isolate recoverable and recyclable materials. The refuse is first shredded, then separated in an air classifier, and then further processed through magnetic and electromechanical devices. Products recovered through these techniques will be sold by Americology for use as recycled raw materials and fuel.

On an annual basis, given the minimum 250,000-ton input which the facility will handle, the following valuable resources will be recovered for sale and reuse: Fiber fuel, 137,500 to 162,500 tons; ferrous metals, 12,500 to 17,000 tons; aluminum, 750 to 1,250 tons; paper, 7,500 to 12,500 tons; and glass aggregates, 17,500 to 25,000 tons. These levels will increase as suburban communities participate with Milwaukee in the resource recovery program. The Americology facility has the capacity to handle up to 400,000 tons of refuse per year.

The Wisconsin Electric Power Co. will use the fiber-fuel component, which constitutes up to 65 percent of the refuse, at its Oak Creek generating station, as a boiler fuel to generate electric power. The fuel is mixed with pulverized coal, and represents an energy recovery equivalent of 75,000 tons of coal per year. Eventually the city of Milwaukee will derive 15 percent of its electrical needs from the plant's refuse-derived fuel.

The new Americology unit is an alternative to the landfill method which has been used by the city. The entire cost of the facility has been borne by American Can Co. The city of Milwaukee has an option to purchase the facility and to share in the revenues from the sale of recovered products, if it chooses to do so. No change in the collection of garbage in the city is required, and the present disposal methods followed by city residents will be continued.

Resource recovery makes sense. Milwaukee's Americology plant is helping to show the way.

REMARKS ON HEW ANNOUNCEMENT CONCERNING REDUCTION IN MEDICAID PAYMENTS

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. ROGERS. A number of Members of the House have indicated concern to me over the announcements made by HEW yesterday that 14 States are subject to reductions in Federal matching funds for their medicaid programs for the quarter ending June 30 because of failure to meet the utilization control requirements of the law; estimated reductions are nearly $107 million. Additionally, because the temporary postponement of earlier reductions which was enacted by the Congress as an emergency measure at the end of June goes out of effect after September 30. HEW has announced that additional reductions of nearly $141 million in Federal medicaid funds for 20 States will also go into effect.

It is unfortunate that HEW chose to notify Members of Congress about the potential reductions without noting that H.R. 3 contains a provision to deal with this problem. That bill, which has received a rule and is expected to be brought to the House floor for action in the next 10 days, not only provides for a postponement of any reductions until after December 31, but it also provides that any State which is in compliance with the requirements of the law at that point will have earlier reductions cancelled. My contacts with State medicaid officials have convinced me that most States believe this is a reasonable and just solution to the problem of the reductions that have been announced. They support a further examination of the basic requirements of the law, of course, and the Subcommittee on Health is prepared to do that. But the indications that State medicaid directors have given to me are that they do not favor many of the provisions in the administration's proposed bill, and they would prefer to have some time to develop suggested alternatives before changes in the legislation are considered. HEW continues to ignore these concerns, however, and each time they announce a reduction, they attempt to exert pressure on the Congress to act precipitously.

H.R. 3 provides us with the opportunity we need to undertake more deliberate consideration without the threat of hundreds of millions of dollars in reductions in State funds hanging over our heads. The Interstate and Foreign Commerce Committee's recommended amendments will relieve the immediate pressure on the States from the reductions, and allow them a new chance to meet the requirements of the law. As I indicated, we expect that the Members of the House will have an opportunity to act on this legislation shortly. We have requested the leadership to give priority to scheduling the bill for consideration. Furthermore, we have been working in close cooperation with Senator TALMADGE and the Finance Committee to allow a rapid conference on H.R. 3 when the House has completed action. The Finance Committee has moved ahead to mark up legislation to curb fraud and abuse in medicare and medicaid that differs only in relatively minor ways from the legislation we are recommending to the House. They expect to complete Senate action in mid-September, and we are confident that we can present a bill to the President before the reductions take effect.

CALIFORNIA ADMISSION DAY

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. ANDERSON of California. Mr. Speaker, September 9 is traditionally an important day in the history of the State of California. It marks the anniversary of our State's admission into the United States, and is annually celebrated as a holiday in commemoration of that event.

California has a rich and interesting history, marked by influences from several cultures which have combined to make our State unique among the other States of the Union. Prior to the arrival of European settlers, approximately 130,000 native Americans made the Golden State their home, living in the land which varies between seacoast and desert, forested mountains and fertile inland valleys.

The first European to see California was Juan Rodriguez Cabrillo, a Portuguese explorer sailing under the flag of Spain, who sailed to the Pacific coast in 1542. Although English explorers claimed the State in 1579 and Russians made claims to the area as well, Spanish interests prevailed. California's early history was marked by the establishment of a series of missions along the coast from San Diego to Sonoma, and of the growth of communities around those outposts.

After Mexico received its independence from Spain in 1822, California became a Mexican province, with its social and economic life based on the huge cattle ranches, or ranchos. The first organized group of U.S. settlers arrived in 1841, and the United States offered to buy the province from Mexico, who refused.

When the Mexican-American War broke out in 1846, the United States seized the opportunity to occupy California. For a brief period of time, American settlers declared the State independent of Mexico, and established the short-lived Bear Flag Republic as an independent nation. However, effective control was soon gained by the military, and Mexico was forced to cede California to the United States in the Treaty of Guadalupe-Hidalgo in 1848.

Less than 2 weeks before the treaty was signed, an event that changed the history of California took place—gold was discovered at John Sutter's sawmill near Coloma. The gold rush drew a huge

influx of new settlers into the State, guaranteeing its admission into the Union.

However, it did not come easy. Increasing tension between slave and free States and their representatives in Congress delayed California's admission. Finally, Henry Clay was able to effect the Compromise of 1850. On September 9 of that year, California officially became a member of the Union of the United States as a free State.

Mr. Speaker, today California stands as one of the most important States in the Union—largest in population, agriculture, and commercial fishing; second in manufacturing and lumber production; and third in land area and oil production. We are rich in natural resources, geographic variety, and scenic wonder. We also have our areas of difficulty—high unemployment, rising cost of living, and remaining injustice in many areas against our ethnic minorities.

Few States, however, have taken such determined steps to meet problems as California has done, and fewer still have met with as much success. So it is only fitting that California Admission Day be celebrated as a State holiday, recalling our rich and unique heritage while looking forward to the promises of the future.

SMALL BUSINESSMEN TO MAKE LESS THAN THEIR EMPLOYEES?

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. ASHBROOK. Mr. Speaker, the National Federation of Independent Business recently completed a nationwide survey regarding to effect of the proposed minimum wage bill on small businesses. According to the results of this survey, thousands of small businessmen would make less than the wages they pay their employees if the bill is enacted.

The NFIB survey indicates that as many as 15 percent of small business employers would make less than the proposed statutory minimum. A major reason for their low hourly earnings is the tremendous number of hours they put in. The survey found that as a group small business men and women average 58 hours a week on the job. Moreover, even the 58-hour figure does not include all the unpaid family help that many small businesses depend upon.

This is not the only indication of the potential adverse impact of the minimum wage bill. The survey data also shows that small business employers making about $10,000 a year stand to lose 19 percent of their earnings to comply with such a new law while those making between $10,000 and $15,000 would forfeit 12 percent of their earnings. Some others would be driven out of business while others would have to reduce their work force.

All of this points to the need for Congress to provide a small business exemption in any new minimum wage bill. Small business men and women should not have to stand helplessly by as their already small profit margins dip to zero.

For the information of my colleagues I am including the text of the press release issued by the National Federation of Independent Business.

[Press Release]

CHICAGO, August 26.—Thousands of small business people will make less than the wages they pay their employees if a proposed minimum wage increase now before Congress passes, according to a new nationwide survey of small businesses undertaken by the National Federation of Independent Business (NFIB).

The survey, released by Wilson S. Johnson, president of NFIB, a nonprofit, nonpartisan organization representing small businesses, shows as many as 15 percent of the nation's 3.5 million small business employers will make less than the proposed $2.65 minimum wage now being considered by Congress. The current minimum wage is $2.30.

Further evidence of the crippling impact of the proposed minimum wage increase can be found in survey data that indicates small employers making less than $10,000 stand to lose 19 percent of their earnings to comply with such a new law. If they make between $10,000 and $15,000, the survey shows compliance would cost them 12 percent of their earnings.

"This confirms the tragic story we at NFIB have known for too long—many small business people are being forced by the federal government to pay employees more than they themselves make," Johnson said.

Johnson said there aren't many options for small business people in Chicago and Illinois who now pay their employees a $2.30 minimum wage if the increase passes Congress. "If they can't pay the 35-cent hourly hike in wages, they must lay people off, raise prices charged the consumer, or go out of business," Johnson said.

The survey indicates that one reason why so many small business employers have low hourly earnings is the number of hours they put in. As a group, small business men and women average 58 hours a week on the job, the survey concludes.

Those 58 hours weekly don't include all the unpaid family help that many of those small firms rely upon, Johnson noted. The survey shows that one of every four small firms receives an average of 20 hours a week in unpaid help from other family members.

"Name me any other group—workers or employers—who put the kind of time in their jobs that small business families do," Johnson said. "Small business people and their families do it because it is a labor of love and they believe in the free enterprise system."

Small businesses are willing to pay their employees a reasonable wage, according to the survey. The survey indicates that more than half of the small business employees receive $4.00 or more per hour. Also, almost one half of the small business employees receive bonuses or extra compensation, the survey shows. Median wages paid small business employees is far above the minimum wage with small business employers paying new employees an average of about $3.25 hourly, according to the survey.

"Small business people employ 56 percent of the private, non-farm workforce. They realize you must pay a good wage to get good employees and those who can are more than willing to do so," Johnson said. "Minimum wage increases hurt those small business people in marginal operations and their employees who normally need more work experience before moving up to better paying jobs. It also hurts marginal employees in larger, more profitable businesses."

Teenagers represent more than one-tenth of the small business work force, the survey showed. Women, many entering the job market for the first time, hold nearly a third of all jobs in small businesses.

"The tragedy of a substantial minimum wage increase is obvious," Johnson said. "Teenage unemployment, now more than 15 percent nationwide, will increase under a new minimum wage law because many of them are marginal employees already and marginal small businesses can't afford to keep the yongsters working."

The survey did show that small businesses do need skilled manual workers and that they are willing to pay them from $3.50 to $5.75 an hour. The demand for skilled manual workers and their wage scale is more than the demand or the wages for clerical, sales or managerial personnel. The survey indicates that there is little demand today for unskilled workers in small business and the demand will diminish further with a minimum wage increase, Johnson said.

Johnson said NFIB, which represents more than 518,000 small firms nationwide, strongly opposes a minimum wage increase.

He explained that the proposed increase would send the hourly minimum wage to $2.65 in January, $2.89 in 1979 and $3.15 in 1980. The legislation also contains an index based upon the hourly wage of production workers in manufacturing which would raise the minimum wage every year automatically.

"Indexing is just another example of Congress shirking its responsibility like it did with the Postal Service," Johnson said.

FOREIGN POLICY TOWARD CHINA

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. CRANE. Mr. Speaker, the Carter administration's efforts to "normalize relations" with the People's Republic of China has ignited a flow of letters to many congressional offices from persons all over the United States. Not only has my office received many letters from persons in the United States opposing the President's foreign policy toward China, but I have also received well over 100 pieces of mail from Taiwan. Although every letter was written in Chinese, they were translated and I would like to share two with you. These letters, written by Chinese who are certainly more familiar with the Communist Chinese than we are, implore the United States not to abandon Taiwan. They also appeal to our commitment to human rights and freedom. The intentions of our present administration have left them perplexed and confused, for they cannot understand how the abandonment of the Republic of China will enhance the prospects for world peace and stability.

Following are two letters to President Carter, copies of which were received in my office:

ROC CLERGYMAN WRITES CARTER

(NOTE.—One of the many letters to President Carter in protest of his movement to promote relations with the Peiping regime was written by C. C. Chen, president of the Churches Union of the Republic of China, on behalf of the union. It reads as follows.)

JULY 30, 1977.

Mr. JIMMY CARTER,
President of the United States of America, Washington, D.C.

DEAR MR. PRESIDENT: We understand that you are a dedicated Christian. We were encouraged when, at your inauguration, you quoted Micah 6:8 and made it the main theme of your address. We have prayed that God would send a strong man of God to protect all Christians from an expanding Communist tyranny. We hoped that you were such a man.

Your intention, made public in a June 30 press conference to normalize relations with the Chinese Communists is a shock and a disappointment to us. We need people who will protect us from a vicious and expanding Communism, not people who will consign us to it. You are a Christian and we are Christians. How can you betray us to our enemies? Please keep those points in mind when you pray for divine guidance.

1. Early in your presidency you, presumably on the basis of your Christian commitment, made a strong defense of freedom and human rights. The Chinese Communists have more seriously and consistently denied human rights than have the Russian Communists. Last year, on April 5, 1976, over a million people gathered in the Tien An Men square in Peiping and demanded freedom.

Only a few days ago a Chinese pilot, Fan Yuan-yen flew a Communist MIG–19 to Taiwan seeking freedom. The 800 million people on the China mainland are as devoted to freedom and human rights as you are, but their attitude toward the Chinese Communist government is very different.

2. The Chinese Communist regime has been and still is brutally anti-Christian. They have relentlessly persecuted Christians, slaughtered believers, confiscated churches, burned Bibles, expelled missionaries, closed convents, appropriated schools and hospitals, prohibited evangelism. After the "cultural revolution" Christianity became almost extinct on the Chinese mainland. In Taiwan, on the other hand, Christianity enjoys unprecedented freedom and considerable expansion.

The United States is a key nation. You are a Christian president. This makes you a symbol for Christians all over the world. How can we believe that you want to demonstrate that Christians find other Christians expendable in the chess games of international politics?

3. Communist expansion is the basic cause of instability, the main threat to world peace. Cooperating with Communist expansion expands tyranny—this is no road to peace.

4. International relations depend on agreements and treaties, and rest ultimately on the moral principle of trust. If you demonstrate that the U.S. is an untrustworthy ally, you have shamed and degraded your nation, and made continuing Communist victories easier.

If you betray Taiwan, now can Japan trust you? Without Japan the Pacific will be open to Russian penetration. Immoral actions bring tragic consequences. This is because God is just.

5. The previous administration made serious mistakes in its China policy. Yours is a new administration, trying to make a cleaner record. Why do you follow Nixon's mistakes?

6. Our late beloved President Chiang was a sincere and devout Christian. The Republic of China, like the United States of America, has devoted Christian leadership. Christians ought not be betrayed to their enemies.

7. We pray to the same God you do. We believe in the same Bible you do. Our Bible says: "Fear not, for those who are with us are more than those who are with our enemy. Jehovah is our rock. Jehovah is our strength." God ultimately will triumph. We pray that God will give you the wisdom to make choices that conform to his will, so that you as a person, and your nation, will prosper.

DR. C. C. CHEN,
President of Churches Union.

The following is a letter to President Carter from all the members of the Catholic Church in the Republic of China:

DEAR PRESIDENT CARTER: We, the National Council for Apostolate of the Laity, represent 300,000 Catholics living in the free area of the Republic of China, as well as 4 million Catholics living under oppression on the China Mainland. We send you our sincerest regards and wish you the peace of our Lord Jesus Christ.

A few months ago, through the news media, we watched with great interest and excitement your inauguration as President of the United States of America. Your stirring and impressive address, your wisdom, outlook, and moral courage filled us all with the greatest respect for you and made us feel certain that the free world had found a trustworthy and capable leader.

President Carter, that which struck us as most admirable and impressive in your address was your emphasis on the goals of "human rights" and "morality". We firmly believe that these two objectives are the only truly solid cornerstone of the United States and of the entire world.

CORDIAL RELATIONS

President Carter, the United States and the Republic of China lie on either side of the Pacific Ocean and maintain friendly and cordial relations. Our 5,000 year old system of philosophical thought and code of moral values coincide perfectly with the original objectives of the United States, as found in the Declaration on Independence: . . . all men . . . are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness." The values of morality and human rights which you stressed so clearly in your inaugural address are identical with these objectives.

Today, on the China Mainland, the Chinese Communist totalitarian regime is acting in direct contradiction to the spirit in which the United States was established, and which was so evident in your cry for justice. The United States Government is currently considering the "normalization" of relations with the Chinese Communist regime. This has caused confusion and disappointment to us and countless other advocates of justice throughout the free world.

President Carter, we realize that your goal is the pursuit of peace; but you must realize that the party with whom you are dealing is a hateful and untrustworthy disciple of totalitarian rule. Any agreement with such an entity is absolutely unreliable. The Chinese Communists are insatiable aggressors, obsessed with the sole ambition of conquering the entire world and burying for good all democratic nations. Strong and prosperous countries are their biggest enemies. To negotiate with them for peace is, as we Chinese put it, about as safe and promising as bargaining with a tiger for his hide!

Today, the China Mainland is shrouded in darkness. 60 million people have been cruelly murdered, 800 million people are living on the edge of starvation; their lives have no security, freedom is nonexistent, the human right of "the pursuit of happiness" is an empty dream for them. If one establishes relations with such a regime, at the expense of truth and justice, even a temporary peace is unlikely to result, while the future is sure to bring disaster and chaos. The current Pontiff, Pope Paul VI's statement, "While human rights are suppressed, no talk of peace is possible", is an apt summary of the present situation. You, a far-sighted and high-principled politician, can certainly, by means of healthy policies in the spirit of justice and moral courage, stop the process of "normalizing" relations with the Chinese Communist regime.

STARTLING EVENT

On July 7 of this year, a startling event occurred: A Chinese Communist air force squadron leader, Fan Yuanyen, defected from the totalitarian regime on the China Mainland and flew a MIG 19 jet fighter to the Republic of China and freedom. His first words after landing on the soil of Free China were: "Life on the (Chinese) Mainland is too hard."

This statement sums up the entire tragedy of the China Mainland.

President Carter, you who are deeply concerned about world affairs, were certainly made aware of this event. You who are continually promoting human rights and calling for justice were certainly deeply moved. Therefore, we are confident that you understand clearly that the people living on the China Mainland have rejected their totalitarian rulers. Fan Yuan-yen's statement is the clearest proof of this fact.

After hearing this proclamation by a spokesman for 800 million suffering people, you surely realized more clearly the violence and inhumanity of the Chinese Communist regime. Certainly you will quickly stop any plans to establish relations with them.

CONFIDENT

We feel confident that, because of you, the Declaration of Independence and Bill of Rights, written by the founding fathers of the United States of America, will shine throughout the world with even more brightness. Likewise, we have great hopes that because of your fortitude and incomparable moral courage, the light of truth will begin to illuminate the dark shadows which now obscure all life on the China Mainland, You, an outstanding Christian, prudent, decisive, and unwavering, supported by the great mercy, wisdom, and courage of all children of light cannot fail to conquer the children of darkness. Goodness will surely win out over evil! The cry for justice which permeated your inaugural address, and which will resound throughout the world for all time, together with your spirit of love and concern for all men, will unquestionably give great pleasure to our God above, and earn for you His most special blessing

President Carter, at a time when the whole world is on the verge of chaos, at an extremely crucial point in man's history, we beg you, do not fail to bear courageously your grave responsibility to all men, and to guide back to the proper path all those who have been misguided and deceived. This is a great and glorious mission! You must not shrink from it!

We remain, Sir,

Yours respectfully,

FRANCIS C. C. SUNG,
President, National Council of the Lay Apostolate of the Republic of China.

AMAZING NEW TREATMENT CAN SAVE HALF OF DOOMED CANCER VICTIMS

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. McDONALD. Mr. Speaker, every so often there is a sensational story about yet another "miracle" cancer cure. This story does not fall in that category. This

treatment works. I have seen it with my own eyes and personally know some of the individuals involved. Originally this treatment was started in the United States, but the Food and Drug Administration in its usual club-handed manner got in the way and attempted to stop the work by imposing impossible conditions upon the work. So now it is carried on in the Bahamas. In the foreseeable future enough medical evidence will have been assembled for it to be brought back to the States and presented to all the skeptics, complete with medical records. As the article describes, miracles have and are being achieved; however, who knows what lurks in the hearts of the bureaucrats at FDA, they may yet discover a new method of blocking hope again. The article from the National Enquirer of September 13, 1977, follows:

AMAZING NEW TREATMENT CAN SAVE HALF OF DOOMED CANCER VICTIMS

A fantastic new treatment for cancer is bringing scores of doomed victims back from death's door—and amazed doctors say it could save 50 to 75 percent of the 385,000 Americans who die of cancer each year.

The treatment is simple yet devastatingly effective, say patients and their physicians. Blood serum agents are injected into the victim, and these help the body's own defenses destroy the cancer.

The method was developed by Dr. Lawrence Burton, for 15 years a cancer researcher at the prestigious Hodgkins Disease Foundation at St. Vincent's Hospital in New York. He left that post to begin testing his treatment on humans—and has had stunning success.

"Over the past 3½ years, 186 patients have been treated on my program," Dr. Burton told the Enquirer. "All but eight were terminal—they'd exhausted all conventional treatments, and had been told by their physicians that recovery was hopeless and they had a very limited time to live.

"But our most recent figures show that of these 186 patients, 114 are alive today!

"Of these surviving patients, 32 are alive less than one year after treatment, 52 are still alive one year or more after treatment, and 30 patients are still alive at least two years after treatment—and these were terminal patients when they first came to us!

"Thirty of my patients had what must be called miracle remissions—they exhibit no sign of cancer. Eighty are in regression, which means their cancer is either diminishing or completely arrested. In the other four cases, it's too soon to tell the success."

American doctors who've closely followed Dr. Burton's work are enthusiastic about the incredible results.

"This technique has the potential to be a tremendously significant addition to our anti-cancer arsenal," declared Dr. Donald Cole, chief of surgery and oncology at Whitestone General Hospital in New York.

U.S. Congressman Lawrence McDonald (D.-Ga.), a urological surgeon, said he's referred about 20 patients to Dr. Burton—and 50 percent have improved.

"This is a dramatic success rate in view of the serious condition the patients were in," noted Rep. McDonald.

"Many were terminal cases, having only a limited time to live—possibly months. But some of them have lived for nearly a year now. These patients owe their survival to Dr. Burton's technique."

Dr. John Beaty, a staff physician at Greenwich Hospital in Greenwich, Conn., sent some 20 patients—many of them terminal—to Dr. Burton. He said 17 are still alive and the cancers of 10 terminal patients are now in remission or regression.

"This is an amazing percentage of success compared even to short-term survival rates of chemotherapy and radiation," declared Dr. Beaty, a teaching assistant in clinical medicine at Columbia University's College of Physicians and Surgeons.

"All 10 (of the terminal patients) owe their very survival to Dr. Burton's treatment. When they began his program, they were declining so rapidly that they were given only a month to a few months to live. But all of them have defeated that terrible prognosis. Not only have they survived—they also show tumor shrinkage, appetite improvement, weight gain and loss of pain.

"I believe this is a breakthrough in the treatment of cancer—the single best frontier in cancer therapy today.

"It's quite reasonable to think that if Dr. Burton's treatment were widely available, we could save as many as 50 percent of the people who now die every year of cancer in this country."

The anti-cancer injections contain a combination of four agents found in every human's blood, Dr. Burton said. The agents include an antibody that destroys cancer cells, plus a substance that keeps the antibody working despite attempts by the tumor to block it.

"The cancer injection works on all kinds of cancers, no matter the site or type," Dr. Burton said.

"We've actually seen tumors begin to die within 24 hours. Some patients go home apparently free of cancer after only 10 days of daily injections!"

Dr. Burton—whose work is funded by a private foundation—first began treating patients at a clinic he set up on Long Island. Last March he opened the Immunology Researching Center in Freeport, Grand Bahamas, to get away from the U.S. Food and Drug Administration's red tape.

"The FDA required tests of us that were pointless, time-consuming, and which our nonprofit organization could never afford," he explained.

Almost all the patients Dr. Burton receives "are considered by their referring physicians to be terminal," he noted. "If we could just get to these patients sooner after the diagnosis. I think we could save as many as 75 percent of those who now die of cancer.

"And we don't know how high the success rate could go!"

Because Dr. Burton is a zoologist, the serum injections actually are administered by Dr. Frederick Weinberg, who was chief pathologist at Central Islip Psychiatric Center on Long Island from 1950–75. Dr. Weinberg told the Enquirer he was skeptical at first—but joined Dr. Burton after seeing the results of serum treatments on dying patients.

"In all my years in medicine, I've never seen any treatment that has yielded this number of dramatic remissions in this short a time," he said.

"If this approach were widely available and used in conjunction with other therapies after early diagnosis, we could save up to 70 percent of the people who die of cancer every year.

"And this immunological approach is painless and simple compared to chemotherapy and radiation."

Here are some of Dr. Burton's amazing case histories:

Leola Klise, a 67-year-old widow from Grand Rapids, Mich., was in agony from terminal cancer of the pelvis when she began treatments. But after six weeks, she said, her pain vanished—and the cancer stopped growing.

"It was just incredible!" Mrs. Klise said. "There's been a real miracle in my life."

Her physician, Dr. Thomas Finch, said: "By the time she went to Dr. Burton, her case was pretty hopeless. She'd had chemotherapy, radiation and surgery, but there was still a cancer growing in her right hip.

"But as the (serum) treatments progressed, the pain left. The before-and-after bone scans showed that while the cancer was still there, it had stopped growing. This is out of the ordinary," Dr. Finch pointed out.

"I think Dr. Burton's treatment should be looked at further."

"Ted Alexander, a school psychologist in Commack, N.Y., learned in 1974 that he had an inoperable tumor inside his skull. He said doctors gave him just four months to live—but today he's still alive.

Dr. Donald Cole of Whitestone Hospital, who had treated Alexander with chemotherapy and radiation before the psychologist underwent serum treatment, commented: "It certainly appears that this patient's improvement may be partially or even completely attributable to Dr. Burton's treatment."

Robert Beesley, a Monroe, Iowa, building contractor, underwent surgery in July of 1975 to remove a massive colon cancer.

Surgeons found the cancer had spread to his liver and lymph glands—and told his brother he had only three months to live. Beesley underwent serum injections.

"I'm alive today because of Dr. Burton's treatment—it was the answer to the prayers of my family," he said.

Added Beesley's pediatrician brother, Dr. James Beesley: "I'm astounded! I expected my brother to die. So did his doctor. But now he's been given a new life."

The incredible effectiveness of Dr. Burton's immunological approach was attested to by Dr. Antonio Rottino, director of research at the Hodgkins Disease Foundation where Dr. Burton spent 15 years.

He was able to make a tumor disintegrate within 15 minutes," recalled Or. Rottino. It was very surprising the first time I saw it, and hard to believe—but the fact is that it did occur."

"If he works with other people with more fundamental knowledge, this kind of work could point to a cure for cancer."

Dr. Carl Markwood, a Sacramento, Calif., specialist in preventive medicine who has observed Dr. Burton's work firsthand, also is convinced the researcher may be on the right track.

"I've seen dramatic cases in which patients' lives have been saved by his treatment when every other therapy had failed," said Dr. Markwood.

"From Dr. Burton's present success in controlling cancer, we think this approach could be the long-sought road toward curing cancer."

GOVERNOR REAGAN OPPOSES PANAMA CANAL TREATIES

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. ASHBROOK. Mr. Speaker, anyone familiar with the continuing debate on the issue of a Panama Canal treaty knows that Gov. Ronald Reagan, California's top elected official for the past two gubernatorial terms, is no newcomer to this long-standing controversy. Yesterday he appeared before the Senate Judiciary's Subcommittee on Separation of Powers and presented his views on the proposed treaties. Touching on the various legal aspects, U.S. management of the canal, possible Soviet involvement, national security interests, Panamanian human rights and other factors involved

in this complex issue, Governor Reagan offered two alternatives for discussion in place of the proposed treaties. For those weighing the arguments on this important issue, the prudent, no-nonsense views of Governor Reagan are a must.

The text of his prepared statement before the subcommittee on September 8, follows:

TESTIMONY BY HON. RONALD REAGAN

Mr. Chairman and members of the subcommittee, thank you for inviting me to appear before you this morning to testify. You are concerned, as I am, with Constitutional and other issues arising out of the proposed Panama Canal treaties, and I appreciate this opportunity to share my views with you.

It is necessary first to comment on the Constitutional issue. Even though I am not a lawyer myself, I can appreciate the hours of research lawyers put into these matters. In reading about the Panama Canal, its history and its operation, as well as its national and international significance, I found myself spending more and more of my time studying the legal cases and opinions which bear on the Canal and our relations with Panama. There is a plentiful supply of logic and common sense in those cases and opinions.

The Executive branch argues that the President's treaty-making powers under the Constitution are enough to dispose of U.S. territory and property without any implementing legislation by the Congress; that transfers of property as specified in a treaty become self-executing once the Senate ratifies the treaty. Historically, Congress has held to a different view, though there have been enough ambiguities over the years to revive the argument with each new cause.

At a glance, the United States Constitution does seem to be ambiguous about the matter:

Article II, Section 2, Clause 2 gives the President authority to negotiate and enter into treaties.

Article VI, Section 2 declares that treaties are the supreme law of the land.

But, the Constitution also places a Congressional act and a treaty on the same footing.

Article IV, Section 3, Clause 2 grants "The Congress", meaning both houses, the power to dispose of territory and other federal property.

Treaties, of course, must not be in violation of the Constitution which grants various powers to the President, the Congress and the States. All of these, at face value, are unlimited, but in reality they are subject to the limitations imposed by other sections of the Constitution, in the form of specific prohibitions, or by the fact that the Constitution vests concurrent or exclusive power in certain units of the government.

Whether the proposed Panama Canal treaty needs implementing legislation in order to dispose of U.S. property lies in this question of "concurrent" versus "exclusive" power.

In his recent paper titled "The Treaty Power and Congressional Power in Conflict: Cession of United States Property in the Canal Zone to Panama", Kenneth Merin, Legislative Attorney of the American Law Division of the Library of Congress, makes the point that, "The Constitutional issue is not, or should not be, involvement of the House of Representatives in treaty negotiations", but ". . . whether, by virtue of Article IV, Congress exercises exclusive or concurrent power over the disposal of territory and property."

Presumably, if it could be proved that Congress' power is concurrent, the proposed Panama Canal treaties would be complete and self-executing if ratified by the Senate. If, on the other hand, the weight of the evidence is for the other view—that the Congress holds exclusive power over the disposal of territory and property—then Senate ratification is not enough. Implementing legislation by the House of Representatives would be required. I believe that careful examination of legal cases as well as historical precedent leads one to the inevitable conclusion that Congress does hold exclusive power and that implementing legislation will be needed in the case of the Panama Canal treaties.

Now, the Executive branch may cite as evidence to support *its* position the treaties we entered into in the last century with a number of Indian tribes. In these treaties we appeared to be ceding land to the tribes without requiring implementing legislation. The practice was stopped altogether more than a century ago, with the passage of the Indian Appropriations Act of 1872, but a closer look at the Indian land treaties shows they were very different from this proposal to turn over U.S. property in the Canal Zone to a foreign government.

The American Indian tribes have always had a unique relationship with the federal government and have not been considered foreign nations. When lands were turned over, the tribes were usually given "right of occupancy", with ultimate authority over the lands still to be held by the federal government. Even in cases where the treaties gave the tribes the land in fee simple, the government reserved the right of eminent domain and sometimes the right to hold veto power over transfer of the land to third parties. Neither of these reservations would apply, of course, when turning property over to a foreign nation, such as Panama.

Other arguments will be put forward to support the contention that implementing legislation is not needed in order to dispose of our property in the Canal Zone. One may have to do with treaties which involved boundary claims. The United States has entered into boundary settlement treaties several times in its history, swapping pieces of land here and there without any implementing legislation from Congress. Again, on closer examination, each settlement of a boundary dispute turns out to have been a matter of recognition of the rightness of the claim of our nation or the other one involved, and not a matter of outright cession of territory.

The case of the Ryukyu Islands might be cited, too. We turned these islands back to Japan in 1972, following ratification of a treaty without implementing legislation. In the 1951 peace treaty with Japan, however, the Japanese did not renounce their right or title to the Ryukyus, as they did to certain other pieces of territory, so that when the time came to discuss the matter further there was no serious question of ownership.

So much for the flaws in the arguments that are put forth to support the idea that the new Panama Canal treaties can be used to turn over U.S. property without special implementing legislation. The strongest evidence to support the opposite assertion is the past record of disposal of U.S. property in the Canal Zone itself.

I have read thousands of words of newspaper and magazine copy and heard many television and radio broadcasts about the Panama Canal treaty issue, but have seen or heard nothing about these cases in the news media. Yet, their significance cannot be underestimated in establishing that legislation will be required of Congress because of its exclusive power to dispose of territory and property.

Back in 1932, our government wanted to build a new legation building on land inside the Canal Zone. It is not proper, of course to build a legation on one's own territory. So, a bill was passed by Congress to authorize the Secretary of State to adjust the boundary between the Canal Zone and the Republic of Panama in order to turn the land for the legation building over to Panama.

Ten years later, the Senate debated approval by Joint Resolution of an Executive Agreement to transfer some land and property in the Canal Zone to Panama. The very question of whether this should be done by treaty—requiring only Senate ratification—or by Executive Agreement—requiring consent of both houses—was hotly debated. The measure was approved, underscoring Congress' Article IV powers.

Early the next year, 1943, the House Committee on Foreign Affairs held hearings on the land transfer in question. Its report adds weight to the argument for requiring implementing legislation in the current case. It said, "Congressional approval of the Executive commitments to Panama is sought in the form of legislation because there is involved (a) a disposition of property of the United States; and (b) an appropriation of funds, both requiring an exercise of the legislative power, independently of the treaty-making power. Article IV of the Constitution provides that "The Congress shall have power to dispose of . . . the territory or other property belonging to the United States'."

Our 1955 treaty with Panama provided for transfer of real property, stating that some would be transferred immediately and the rest with Congressional authorization. During the hearings on the treaty, however, a State Department representative testified that the legislation would be needed in order to implement the transfer of all the property in question.

A number of Supreme Court decisions over the years has reaffirmed the exclusive nature of Congress' power to dispose of territory and property under Article IV of the Constitution.

In the face of all the historical and legal evidence indicating that implementing legislation from the Congress will be necessary in the case of U.S. property in the Canal Zone, it is hard for me to believe that the Executive branch would want to circumvent the Congress' rights and responsibilities in this matter. If our foreign policy is to be fully effective, cooperation of the Congress is a vital ingredient.

OTHER FACTORS

The Constitutional issue is of great importance, but so is the security of the United States and the Western Hemisphere.

I have not yet received a copy of the treaty draft to read, but members of my staff and I have been briefed on its contents by Ambassadors Bunker and Linowitz and other members of the U.S. neogtiating team. I believe the ambassadors worked earnestly and hard under difficult circumstances and there are some commendable ideas contained in the proposed treaties. But, I also believe they have an overriding—indeed a fatal flaw. They proceed from a false premise, that we can expect reliable, impartial, trouble-free, secure operations of the Canal in the future by relinquishing the rights we acquired in the 1903 treaty.

In that treaty we acquired the rights of sovereignty over the Canal Zone, to the exclusion of the exercise of such rights by the Republic of Panama.

We did not acquire the Canal Zone as we did the Louisiana Purchase or Alaska. Many people think we did, but the fact is that the Canal Zone is unique.

It seems clear, from the language of the 1903 treaty, that the intention of our government was to acquire a firm, unshakable legal basis for building, operating and defending

the Canal. The language that says we shall act "as if we were sovereign" underscores the point, for we did not acquire the Canal Zone for the purpose of extracting minerals, tilling the soil or establishing a mercantile colony. It was a single-purpose enterprise. But, the important thing to remember is that only one nation can exert sovereign rights over a given piece of land at one time, and the 1903 treaty made it clear that we would do so in the Canal Zone and that the Republic of Panama would not.

To this day, it is those rights of sovereignty which undergird our ability to operate and defend the Canal. We cannot be kicked out summarily on the whim of some Panamanian government.

Once those rights are removed—and they will be removed immediately if the new treaties become effective—there is nothing to prevent a Panamanian regime from deciding one day to nationalize the Canal and to demand that we leave immediately. That would present us with the very thing the treaty advocates say we want to avoid; confrontation, or its alternative, unceremonious withdrawal in the face of an arbitrary demand.

For more than 60 years we have operated the Panama Canal efficiently, impartially and on a not-for-profit basis. The nations of the Western Hemisphere have come to rely on our stable presence there to make sure that their commerce would get through unhindered.

We cannot be certain, if these new treaties go into operation, that key personnel now operating the Canal will not leave a great deal sooner than expected, thus bringing into question the smooth operation of the Canal. We cannot be certain that, as the American presence withdraws from the Canal Zone, new demands for accelerated withdrawal will not be made under threat of violence. We cannot be certain that outside influences hostile to Hemispheric security will not make their presence felt much greater than before in Panama. We cannot be certain that Americans operating the Canal will not be harassed by an unstable and power-hungry dictator.

Fidel Castro, whose interest in exporting revolution is well known, has made quite a show of his friendship for the current military regime in Panama. And, just this summer, a delegation from the Soviet Union visited Panama to look into trade, investigate possible plant locations and even the possibility of opening a bank in Panama. It should never surprise us that whenever the United States withdraws its presence or its strong interest from any area, the Soviets are ready, willing and often able to exploit the situation. Can we believe that the Panama Canal is any exception?

Although the proposed second treaty would continue indefinitely beyond the expiration of the first one in the year 2000, the question must be asked, does it really provide what it says it will, which is the unilateral ability of the United States to step in to defend the Canal if its neutrality is threatened?

I believe we will make a very grave mistake if we let ourselves be inveighed into debating what the treaties do or do not say. Yes, on paper, we are told we have the right to step in—even after we have turned over control and removed our forces. But will we?

We are told by the treaty advocates, there will be unpleasantness and trouble if we don't accept these treaties. The same people then assure us we can march back in if there is trouble. But once we have said, in effect, "We don't want trouble; we'll give up the Canal," have we not also said, "If the government of Panama, encouraged by leftist allies, plays fast and loose with the treaty," we'll decide—since we are giving it up anyway—"why bother?"

I don't believe such a concern is unjustified, given the recent history of our nation. We have shown a reluctance to meet the responsibility of free world leadership, even on occasion to abandon allies.

We have been told the Canal is declining in terms of military importance and yet all but a handful of our navy ships can transit the Canal. The great bulk of material bound for our forces in Vietnam went by way of the Canal. And who can say what shape our navy will take 20 or 30 years from now? It may very well consist in this missile age of small, fast ships relying on quick accessibility from one ocean to another.

President Carter cites a statement by the Joint Chiefs of Staff that the treaty is satisfactory in terms of our defense needs. I mean no disrespect to these fine men. Yet, in a recent letter to the President, four former Chiefs of Naval Operations—now retired and, therefore, free to speak out on this issue—underscored the importance of our keeping active control of the Canal. Admirals Arleigh Burke, Thomas Moorer, Robert Carney and George Anderson said, in part, "As long as most of the world's combatant and commercial tonnage can transit through the Canal, it offers inestimable strategic advantages to the U.S., giving us maximum strength at minimum cost.

"By contrast, the Panama Canal, under control of a potential adversary, would become an immediate crucial problem and prove a serious weakness in the overall U.S. defense capability, with enormous consequences for evil."

Our continued presence at the Canal inhibits potential adventurers from trying to make international trouble there far better than would a piece of paper granting us the right to return after we had once departed.

It is no secret that the Soviet Union believes control over some 16 vital sea lane "choke points" means dominance of the world's oceans. Our presence at one of the busiest and most important of those "choke points" is a definite deterrent.

There is another factor at work which could be harmful to the security of the Hemisphere because it could further question our willingness to maintain a leadership role. Let us remember that, for much of the time, while these treaties were being negotiated, we were doing so (especially in the last two years) under repeated threats of violence. True, the threats slackened off this year, possibly because General Torrijos saw victory ahead. Some may believe the threats were a bluff, but the fact remains that we did continue to negotiate and, apparently, made concessions in the face of threats. The President seemed anxious to speed up and bring the matter to a conclusion in spite of his previous declarations that he would never relinquish effective control of the Canal.

If we accede to a treaty under such circumstances, will this mark the end of further demands? If there are, indeed, radical guerillas in Panama (as we are told) ready to blow up the Canal if we don't sign a treaty, what assurance do we have that they will be satisfied with the terms of these treaties? Already, the government-sponsored student federation in Panama has issued a manifesto supporting the treaties, but also indicating that "the struggle will continue" so long as there is any American presence at the Canal. If they should press Torrijos to ignore these treaties, would we not hear the same arguments from the same people for giving in to those new demands that we are hearing today?

Whether or not these treaties ever go into effect, we can expect trouble from leftist elements in Panama and elsewhere. Yes, failure to ratify the treaty will offer an excuse for demonstrations and riots in Panama and very possibly in the U.S. And, behind the scenes, the Russian Bear will do all it can to destabilize the security of the Hemisphere and cause a global whirlwind of unfavorable press aimed at us—not because we didn't ratify the treaty but because that is their normal procedure where we are concerned.

LATIN AMERICA

The treaty advocates say failure to ratify and implement these treaties will harm our relations with all of Latin America. Is it possible they believe they are betting on a sure thing? Historically, our Latin American neighbors have felt the need to be somewhat on guard against a United States which to them is the "Colossus of the North." A natural reaction has been to vote as a group on inter-American matters in international forums. This does not mean, however, that all Latin American nations have identical interests or think alike. As a matter of fact, a surprising number have privately expressed concern about our possible withdrawal from the Canal.

Frankly, I believe we can question not only the warnings about possible deterioration in our relations with Latin America if we don't ratify the treaty but also the glowing promises of a new era if we do.

The fact is we do not now have a coherent policy toward our Western Hemisphere neighbors. And we should because, over the next few decades, our continued prosperity, possibly even our survival will be closely linked to that of our neighbors within this Hemisphere. I do not believe these treaties are a substitute for such a policy. I do believe that the U.S. negotiating from strength and not meekly yielding legitimate rights and responsibilities out of a desire to avoid unpleasantness, can be truly helpful to the people of Panama and to all the Hemisphere.

Some of our neighbors need air we are in a position to give. With others, the need is for increased technology and trade; and with some, unhindered access to capital for needed development. Once our government recognizes that we must all sink or swim together maybe we'll stop some of our self-defeating practices. It is self-defeating to throttle a nation's ability to obtain capital because it doesn't run its internal politics precisely as we would like. It is self-defeating to keep a neighbor from buying weapons for its police force because someone in Washington sees terrorists as mere political dissidents. Thus, we encourage more terrorism and hurt a nation's chances for economic recovery.

Our neighbors in Latin America ask that we learn enough about them to have some understanding. Sometimes, their problems are similar, sometimes different but each nation is deserving of understanding.

What especially do the Panamanians want? That isn't an easy question to answer since there is no elected government, nor can we be sure a plebiscite of the people on the treaties would give an accurate answer in view of the nature of the government.

We are left with some educated guesses about the wants of the Panamanian people. Thanks in large part to the Canal, the Panamanins have the highest per-capita income in Central America and the third and fourth highest in all of Latin America. But their economy is near bankruptcy. They are plagued by inflation and unemployment while natural resources lie undeveloped.

Contrary to what has been implied about my own position, I do not believe that in rejecting these treaties we should simply demand the status quo and not seek answers to problems regarding our relations with the people of Panama.

Early in this century, we realized our dream of a waterway connecting the two great oceans. Panama, then a neglected province of Colombia, also realized a dream—to be free and independent. The two dreams were inter-related. Many in our country

thought the Canal should be in Nicaragua. The Panamanians knew their only chance to have independence and prosperity lay in the Canal being built in Panama. And so it was that Panama ratified the Hay-Bunau-Varilla Treaty months before it was ratified by our own government.

We have nothing to be ashamed of and much to be proud of. We created one of the great wonders of the world and it is doubtful any other nation could have done so. More than that, however, we have managed the Canal fairly for all nations at no profit to ourselves and with great economic benefit to Panama. Not only did we deal fairly with the governments of Panama and Colombia, we also bought every piece of privately owned land in the Canal Zone in fee simple from the individual owners. And may I point out the Canal Zone is not flanked by Berlin Walls. The people of Panama can go in and out of the Zone freely at all times.

But times change and the Panamanians have a growing feeling of nationalism. We, on the other hand, cannot weaken our ability to provide security for our nation and the entire Western Hemisphere. Can ways be found to satisfy some of their national aspirations without compromising our ability to meet security requirements?

Though I believe that the basic flaw of the proposed treaties requires that they not be ratified, there are alternatives we should examine.

Let us explore, for example, broadening participation in Canal policy making. The proposed basic treaty calls for a governing board with five U.S. and four Panamanian directors till the year 2000, when it expires. An alternative to consider would be a board comprised of a group of permanent U.S. seats, another group of permanent Panamanian seats and a third group of term seats to be rotated among Canal-using nations. Another possibility might be to have that third group made up of representatives of our neighbors, the nations of North and South and Central America. In the case of the first alternative, the international directors might be drawn from a Panama Canal Users Association to be set up at the time the plan is activated. Nations paying dues into such an association for the benefit of Canal improvements might have as one privilege discounts on tolls under a revised and increased toll system designed to operate the Canal in the black.

The proposed treaties call for an increase of the money we pay Panama annually from $2.3 million to an average income from Canal operations of as much as $80 million.[1] There is no assurance this would benefit the Panamanian people. A modernization program—the Terminal Lake Third Lock plan could definitely help the people. It would be approximately 10 years in the building and cost between one and two billion dollars. We could make certain that Panamanian workers and contractors were engaged extensively in the program which would directly benefit the people and the economy of Panama.

Such a modernization of the Canal would make it capable of handling all but a possible few Super Tankers. This could have important implications for the cost of moving Alaskan oil to Gulf Coast refineries. Then, too, increased speed of transit and general traffic would mean increased toll revenues which could further benefit Panama through a sharing formula.

These are two alternatives for discussion. I'm sure there are more available for a United States willing to do what it can for a neighbor without abdicating its own responsibility to permanently provide an open waterway for all the world's shipping and a guarantee of security for the Western Hemisphere.

HUMAN RIGHTS

In conclusion, I would like to touch on the subject of human rights. The concept of individual human freedom is deeply ingrained in us here in the United States. Though I believe the best way to help human rights flourish elsewhere is to set the best possible example in our own country, I realize that some idealists believe we should be more assertive in getting others to follow our example. Now that a high standard of sensitivity to human rights has become a cornerstone of our government's policy, I think it is not only fair but mandatory to raise the question with regards to the repressive regime in Panama with which we have been negotiating. And, I do not accept our negotiators' effort to characterize it as merely authoritarian.

Human rights criticism, public and private, has been leveled at a number of nations in the Western Hemisphere which have always been friendly toward us, yet I cannot recall a single word of criticism by any representative of our government toward Panama in this regard. Yet, Freedom House, which is recognized internationally as an impartial monitor of the status of human freedom, rates Panama as one of 67 nations in the world that is "not free." They rate 42 as "free" and 48 as "partly free." In its annual survey, Freedom House rates political rights on a scale of one to seven, with seven being least free. They rate Panama as a seven. They rate civil rights on a similar scale, and Panama receives a six.

Documents have been widely circulated in this country, with names, dates, places, and details of alleged violations of human rights by the regime in Panama. I, personally, have received a letter from a Panamanian businessman who was forced, at gunpoint, from his automobile some months ago and sent into exile because he had dissented.

Can we afford a double standard in this most fundamental of areas? I don't think so, for to do so says to the world that we are cynics, using the issue of human rights only as a tactic to produce specific political results. Worse, it may say to those who hold out hope of reduced oppression and ultimately the restoration of freedom that Americans are, when you get right down to it, hypocrites. The recent history of our negotiations with the Panamanian dictatorship does nothing to dispell such concerns. So, I leave you with this question: can we separate Canal negotiations from human rights when those rights as we know them are severely limited in Panama?

CONCLUSION

Finally, what conclusions are to be drawn about these treaties? Let me reiterate that:

The Panama Canal is vital to our security and that of the Western Hemisphere;

We provide the one sure guarantee that the commerce of the world will have continued access to this waterway;

The rights of sovereignty we hold in the Canal Zone are the foundation of our ability to remain there to operate and defend the Canal;

The proposed treaties relinquish those rights and do not provide adequate guarantees against future threats to the canal;

Alternatives should be sought which recognize the aspirations of the Panamanian people, without compromising our ability to meet security requirements.

Thus, the treaties as proposed should not be ratified. Furthermore, it seems clear from legal opinions and historical precedent that the ratification process will require implementing legislation by the Congress.

Thank you again for inviting me to appear before you.

SAVING FREE ENTERPRISE

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. ABDNOR. Mr. Speaker, I commend to attention of my colleagues another in a series of prize winning essays from a contest sponsored annually by the South Dakota Stockgrowers Association on "How the Free Enterprise System Can Be Saved." These are the ideas of Doris Powers of rural Kimball, S. Dak., a sophomore at Kimball High School.

Her ideas follow:

HOW THE FREE ENTERPRISE SYSTEM CAN BE SAVED

(By Doris Powers)

Yes, the free enterprise system is our way of life. It is an economic system that is second to none and the envy of the world. It is an economic system that has given us the highest standard of living of any country in the world. However, like anything that is great, it is not perfect. Therefore, one must ask the question how can the free enterprise system be saved?

I would like to reflect on some of the critical issues which are now threatening our free enterprise system. Issues that must be decided if we are to preserve the freedom that our ancestors fought for over 200 years. The decisions that must be reached by our Congress in the near future on these critical issues are—whether a free economy and private institutions that are a necessary part of a free economy to survive; or whether it will be replaced by government controlled economy and usurped federal bureaucracies until free enterprise is eliminated in our nation.

These trends of government controls and the federal bureaucracies must be reversed if we are to save our free enterprise system. We cannot continue to cripple our private sector in the manner that the legislative bodies of this nation have been doing in recent years unless we want our free economy destroyed. The question is will our Congress change its present direction which will destroy our free enterprise system? The only way that Congress is going to reverse its present trend is by the outcry of their constituents, that is you and me.

Now let's look at some serious problems facing us—let's get to the facts behind the problems—let's see the causes so we can determine what must be done. The solutions will not be easy but we can take the proper course to correct the problems.

When trying to solve our national problems we must consider world conditions and problems. Our world population is estimated at four billion people and growing rapidly. In the next twenty-five years the world population will almost double again. About one-third of the present population live with the highest standard of living while the remaining two-thirds live as their ancestors have lived for generation after generation in fuedal misery. This large proportion of population living in what we call underdeveloped countries creates a truly explosive situation.

Food production is another supply problem facing us in the future. We are fortunate that our country is blessed with the most productive agricultural economy in the world. The present and continued population explosion of the world with knowledge of starvation in large portions of the world's population poses some critical issues to be solved.

We are all aware of the energy supply

problem which is front page news. Are you aware of the growing shortages in other important material in our economy—materials such as steel, iron ore, aluminum, copper, chromium, nickle, timber and phosphates?

We are all aware of OPEC and its effects on the industrialized nations. But are you aware of countries considering similar cartels? Many countries having materials such as iron ore, bauxite, copper, mercury, and phosphates are busy organizing their own cartels patterned after OPEC. These developing countries want a better way of life and they visualize raw material cartels like OPEC as their weapon to get a chunk of the standard of living that has been achieved by the industrial world.

Let's look at some of our domestic problems and their solutions. Inflation is one of these problems. The old saying, "You can't take it with you" does not hold water today, because it's already gone before you are.

When you aren't buying something new, you are saving money. If a lot of people aren't buying now—You have a recession on top of inflation.

Recession and inflation are very much related and no long run solutions can ignore either problem. Both must be solved if we are to have a sound economy. Let's look at the underlying factors which accelerate these two problems.

There is one cause of inflation in our country as well as two other factors of somewhat lesser importance. The major cause is our continuing long-term deficits in our Federal Budget. In the last ten years the Federal Government has borrowed over 245 billion dollars to cover deficits in the Federal Budget which has increased the inflationary pressures on all of us.

In other words, only Congress can turn off inflation by living within a balanced budget and not a deficit one. We think of inflation in terms of rising prices, but to understand inflation properly and to get it under control, we have to understand that inflation is really manifested in a decrease in the value of money.

Inflation is caused by political figures who vote to spend more than they vote to raise through taxation. It is a good way to get elected but the consequences on the American economy are catastrophic. Inflation is a social disease caused by political excesses and like most social diseases, those who cause it are reluctant to admit it.

Our antitrust laws are built-in protection to safeguard our free enterprise system. But there are two extremely important areas of our national economy where our antitrust laws have no jurisdiction and these are two supporting causes of inflation.

The first area is our nation's labor laws which exempt unions from the requirements of our anti-monopoly legislation, even though the cost of labor is between 75 and 90 percent of the price of all goods and services produced in the U.S.A. For example, it is criminal under our laws for General Motors, Ford and Chrysler to join together to force up the prices of automobiles but it is perfectly legal for employees of these three companies to join together to do the same thing and they have been in the habit of doing this every three years. This type of inflation will never be corrected until our elected representatives in Congress are willing to squarely face this problem.

Another area untouched by our antitrust laws is the cartels being organized in other countries beyond the reach of our laws. The impact of the oil cartel has been substantial and threatens to get worse.

The other major economic problem facing our economy is recession. We must determine what has caused a slow down in our economy and what needs to be done to get our economy going again. The single most important thing to do is in restoring the health of our economy is to put the word "profit" back in our vocabulary as a description of an essential, respected and absolutely vital component of national economy.

In the last 25 years we have witnessed a steady decline in the share of our national income that has been earned as profit. The tragic performance by some of our political leaders attacking the profits of individuals and companies for their own political gains. Companies and individuals all must show a profit if they are to exist and to invest capital back in our economy to create new jobs, expansion and modernization.

If we want to have a healthy economy in our free enterprise system we must solve these problems.

First, we have the highest rate of taxation on capital gains of any country in the world and the lowest rate of investment in the private sector of any of the free market industrial countries.

Second, the appetite of the Federal government for more and more funds to finance its monstrous deficits have monopolized a giant share of the credit available in the nation.

Third, scarcely a year goes by without the Congress passing legislation to establish another new massive Federal Regulatory Agency; and very few State Legislatures can resist the same temptation!

Fourth, tax structure and policy of our nation is another reason that is putting the brakes on our economic progress. Our political leaders have for years adopted a philosophy of holding down taxes by the low and medium income taxpayer and making it up by charging high taxes to corporations and higher income individuals.

These are some of the problems that need to be addressed to get our economy moving again, to preserve our private sector, to enable private enterprise to fulfill its traditional role in our society.

The situation is serious and make no mistake about it. If the private sector is unable to raise the capital necessary for expansion and modernization to provide the goods and services the American people need and desire—then government will be called upon to provide capital and own the facilities. When government owns the means of production, you are well down the road that Karl Marx proposed some years ago.

MAKING THE RUSSIANS SEEM 10 FEET TALL

HON. JAMES P. (JIM) JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 9, 1977

Mr. JOHNSON of Colorado. Mr. Speaker, the current effort to rekindle the cold war by those who measure patriotism in terms of how much blood and treasure can be expended, and equate love of country with bombast and militarism, is becoming more and more tiresome. Those of us who know better must not let the noisy fearmongers get too far ahead in their public relations campaign, lest we find that policy follows demagoguery in lock step.

Recently, Mr. Fred W. Neal wrote an article for the Washington Star entitled, "Making the Russians seem ten feet tall." It is clear and to the point. I recommend it to my colleagues and to those who read the CONGRESSIONAL RECORD as a concise and objective analysis on a subject that rarely receives rational treatment:

MAKING THE RUSSIANS SEEM 10 FEET TALL

(By Fred Warner Neal)

Harvard historian Richard Pipes has joined those Americans who General Eisenhower once described as prone to believe all Russians are ten feet tall.

Pipes' name became well known as chairman of Team B, which discredited the CIA estimate of Soviet strategic objectives. He has captured press attention in recent articles by informing all who can read "why the Soviet Union thinks it could fight and win a nuclear war." (*Commentary*, July 1977; *Washington Post*, July 3; *Washington Star*, July 24). He deserves an answer.

Prof. Pipes' position is typical of those who believe Soviet military writers enunciate communist gospel. Of course, leading Soviet military figures write about the necessity for the Soviet armed forces to be able to fight and win a nuclear war. Any military figure in any nation who didn't believe his country's armed forces must be able to fight and win any kind of war ought to be fired.

The armed forces are important in the Soviet Union, but they, as all else in the U.S.S.R., are and always have been subordinate to political rule by the civilians in the Communist party. We would have much to concern us if the Soviet Union were a military dictatorship, which it is not.

The official position of the party on nuclear war is clear and absolute, as enunciated and refined over a period of 20 years. It is that a nuclear war must be avoided at all costs. Soviet civilian leaders and their scientists know a nuclear war would destroy them as well as the hopes of the Soviet Communists for achieving a Communist world.

How, then, does one explain statements emanating from the Soviet military establishment? It is not difficult. Soviet military leaders think in heavy-handed, traditional military terms, often out of touch with reality postulated by their own scientists. For all their claims of being able to fight and win a nuclear war, they do not—at least publicly—face up to what such a war would mean; consequently they do not tell us how they would "win" or what "winning" would mean.

Furthermore, Soviet military leaders even more than civilians have a distrust of "the imperialists," even deeper than our distrust of Communists. They are not persuaded that the United States would never launch a first strike against them. Also, there is a consummate fear of the "German threat" which cost 20 million Russian dead in WW II. And, additionally, the Soviet Union sees threats not only from the West, but also from China.

Professor Pipes takes exception to The Star's reference to his "mind-set." It is an essential and valid point which The Star makes. It is the "mind-set" of the Cold War. I know of no way in which reason, facts or anything else can influence people who have this mind set. It is not to question either their motives or their intelligence to say that they are bound by an ideological view as rigid as that which binds the Soviet leadership. And this inevitably distorts the way they look at things and the deductions they draw from what they think they see.

Professor Pipes is a member of an organization known as the Committee on the Present Danger—the present danger being that of Soviet military aggression. More than 25 years ago I worked as an assistant to president James B. Conant of Harvard and to former Undersecretary of the Army Tracy Voorhees, who headed a group also known as the

Committee on the Present Danger. The "present danger" then, too, was Soviet military aggression.

What did the Committee on the Present Danger in the 1950s see as evidence? They cited Soviet ideology as demanding Soviet world domination; the war in Korea as a step toward achieving it; Moscow's insistence on developing nuclear weapons as preparation for an attack; and Soviet policy toward Germany as an effort to take over Western Europe.

These fears proved to be without foundation. Nevertheless, they led the United States into a vast military expansion, introducing nuclear submarines, seeing a missile gap where there was none, refusing a comprehensive test ban and introducing MIRV to overcome a nonexistent ABM. Most of these American policies were ill-advised and in fact left us with less security than formerly.

In short, the deductions were faulty. They resulted from a "mind-set." It should give us pause to think.
